# PowerShares 1-30 Laddered Treasury Portfolio

## Summary Information

### Investment Objective

The PowerShares 1-30 Laddered Treasury Portfolio (the "Fund") seeks investment results that generally correspond (before fees and expenses) to the price and yield of the Ryan/NASDAQ U.S. 1-30 Year Treasury Laddered Index (the "Underlying Index").

### Fund Fees and Expenses

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund ("Shares"). Investors may pay brokerage commissions on their purchases and sales of Shares, which are not reflected in the table or the example below.

#### Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.25%
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.25%

### Example

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. This example does not include the brokerage commissions that investors may pay to buy and sell Shares. Although your actual costs may be higher or lower, your costs, based on these assumptions, would be:

1 Year	3 Years	5 Years	10 Years
\$26	\$80	\$141	\$318

### Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 7% of the average value of its portfolio, excluding the value of portfolio securities received or delivered as a result of the Fund's in-kind creations and redemptions.

### Principal Investment Strategies

The Fund generally will invest at least 80% of its total assets in U.S. Treasury securities that comprise the Underlying Index. The Underlying Index measures potential returns of a theoretical portfolio of U.S. Treasury securities with a yield curve based upon 30 distinct annual maturities. The Underlying Index seeks to maintain a continuous maturity laddered portfolio of securities, meaning that securities holdings are scheduled to mature in a proportional, annual sequential pattern. Nasdaq, Inc. (the "Index Provider") allows a six-month maturity deviation if securities with a desired maturity date are not available. Strictly in accordance with its guidelines and mandated procedures, the Index Provider selects securities for inclusion in the Underlying Index that are U.S. Treasury-auctioned issues with

fixed coupon rates that are non-callable. The Index Provider does not include treasury inflation-protected securities, bills or zero-coupon securities in the Underlying Index. The Fund generally invests in all of the securities comprising its Underlying Index in proportion to their weightings in the Underlying Index.

*Concentration Policy.* The Fund will concentrate its investments (i.e., invest 25% or more of the value of its total assets) in securities of issuers in any one industry or sector only to the extent that the Underlying Index reflects a concentration in that industry or sector. The Fund will not otherwise concentrate its investments in securities of issuers in any one industry or sector.

### **Principal Risks of Investing in the Fund**

The following summarizes the principal risks of the Fund.

#### **The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.**

*Fixed-Income Securities Risk.* Fixed-income securities are subject to interest rate risk and credit risk. Interest rate risk refers to fluctuations in the value of a fixed-income security resulting from changes in the general level of interest rates. When the general level of interest rates goes up, the prices of most fixed-income securities go down. When the general level of interest rates goes down, the prices of most fixed-income securities go up. Fixed-income securities with longer maturities typically are more sensitive to changes in interest rates, making them more volatile than securities with shorter maturities. Credit risk refers to the possibility that the issuer of a security will be unable and/or unwilling to make timely interest payments and/or repay the principal on its debt. Debt instruments are subject to varying degrees of credit risk, which may be reflected in credit ratings. There is a possibility that the credit rating of a fixed-income security may be downgraded after purchase, which may adversely affect the value of the security. Securities issued by the U.S. Government are subject to limited credit risk; however, securities issued by U.S. Government agencies are not necessarily backed by the full faith and credit of the U.S. Government.

*Changing Fixed-Income Market Conditions.* The current historically low interest rate environment was created in part by the Federal Reserve Board ("FRB") and certain foreign central banks keeping the federal funds and equivalent foreign rates at or near zero. The "tapering" in 2015 of the FRB's quantitative easing program, combined with the FRB's recent raising of the target range for the Federal Funds Rate (and likely eventual increase in equivalent foreign rates) may expose fixed-income markets to heightened volatility and reduced liquidity for certain fixed-income investments, particularly those with longer maturities, although it is difficult to predict the impact of this rate increase and any future rate increases on various markets. In addition, decreases in fixed-income dealer market-making capacity may also potentially lead to heightened volatility and reduced liquidity in the fixed-income markets. As a result, the value of the Fund's investments and Share price may decline. Changes in central bank policies could also result in higher than normal shareholder redemptions, which could potentially increase portfolio turnover rate and the Fund's transaction costs.

*U.S. Government Obligation Risk.* The Fund may invest in U.S. government obligations issued or guaranteed by the U.S. Government, its agencies and instrumentalities, including bills, notes and bonds issued by the U.S. Treasury. U.S. Government securities include securities that are issued or guaranteed by the United States Treasury, by various agencies of the U.S. Government, or by various instrumentalities which have been established or sponsored by the U.S. Government. U.S. Treasury securities are backed by the "full faith and credit" of the United States. Securities issued or guaranteed by federal agencies and U.S. Government-sponsored instrumentalities may or may not be backed by the full faith and credit of the United States. In the case of those U.S. Government securities not backed by the full faith and credit of the United States, the investor must look principally to the agency or instrumentality issuing or guaranteeing the security for ultimate repayment, and may not be able to assert a claim against the United States itself in the event that the agency or instrumentality does not meet its commitment. The U.S. Government, its agencies and instrumentalities do not guarantee the market value of their securities, and consequently, the value of such securities may fluctuate.

*Call Risk.* If interest rates fall, it is possible that issuers of callable securities with high interest coupons will "call" (or prepay) their bonds before their maturity date. If an issuer exercised such a call during a period of declining interest rates, the Fund may have to replace such called security with a lower yielding security. If that were to happen, the Fund's net investment income could fall.

*Market Risk.* Securities in the Underlying Index are subject to market fluctuations. You should anticipate that the value of the Shares will decline, more or less, in correlation with any decline in value of the securities in the Underlying Index.

*Market Trading Risk.* The Fund faces numerous market trading risks, including the potential lack of an active market for the Shares, losses from trading in secondary markets, and disruption in the creation/redemption process of the Fund. Any of these factors may lead to the Shares trading at a premium or discount to the Fund's net asset value ("NAV").

*Non-Correlation Risk.* The Fund's return may not match the return of the Underlying Index for a number of reasons. For example, the Fund incurs operating expenses not applicable to the Underlying Index, and incurs costs in buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Underlying Index. In addition, the performance of the Fund and the Underlying Index may vary due to asset valuation differences and differences between the Fund's portfolio and the Underlying Index resulting from legal restrictions, costs or liquidity constraints.

*Index Risk.* Unlike many investment companies, the Fund does not utilize an investing strategy that seeks returns in excess of its Underlying Index. Therefore, it would not necessarily buy or sell a security unless that security is added or removed, respectively, from the Underlying Index, even if that security generally is underperforming.

**Non-Diversified Fund Risk.** Because the Fund is non-diversified and can invest a greater portion of its assets in securities of individual issuers than a diversified fund, changes in the market value of a single investment could cause greater fluctuations in Share price than would occur in a diversified fund. This may increase the Fund's volatility and cause the performance of a relatively small number of issuers to have a greater impact on the Fund's performance.

**Issuer-Specific Changes.** The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

## Performance

The bar chart below shows how the Fund has performed. The table below the bar chart shows the Fund's average annual total returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing how the Fund's total return has varied from year to year and by showing how the Fund's average annual total returns compared with a broad measure of market performance and an additional index with characteristics relevant to the Fund. Although the information shown in the bar chart and the table gives you some idea of the risks involved in investing in the Fund, the Fund's past performance (before and after taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at [www.invescopowershares.com](http://www.invescopowershares.com).

### Annual Total Returns—Calendar Years

#### Best Quarter

16.35% (4th Quarter 2008)

#### Worst Quarter

(6.16)% (2nd Quarter 2009)

### Average Annual Total Returns for the Periods Ended December 31, 2015

After-tax returns in the table below are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns shown are not relevant to investors who hold Shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	1 Year	5 Years	Since Inception (10/11/07)
Return Before Taxes	0.11%	5.55%	6.12%
Return After Taxes on Distributions	(0.79%)	4.54%	5.01%
Return After Taxes on Distributions and Sale of Fund Shares	0.07%	3.88%	4.36%
Ryan/NASDAQ U.S. 1-30 Year Treasury Laddered Index (reflects no deduction for fees, expenses or taxes)	0.37%	5.83%	6.43%
Barclays U.S. Treasury Index (reflects no deduction for fees, expenses or taxes)	0.84%	2.91%	4.16%

## Management of the Fund

**Investment Adviser.** Invesco PowerShares Capital Management LLC (the "Adviser").

**Portfolio Managers.** The following individuals are responsible jointly and primarily for the day-to-day management of the Fund's portfolio:

Name	Title with Adviser/Trust	Date Began Managing the Fund
Peter Hubbard	Vice President and Director of Portfolio Management of the Adviser and Vice President of the Trust	Since Inception
Jeffrey W. Kernagis	Vice President and Senior Portfolio Manager of the Adviser	Since Inception
Gary Jones	Vice President and Portfolio Manager of the Adviser	January 2012
Philip Fang	Vice President and Portfolio Manager of the Adviser	Since Inception
Richard Ose	Vice President and Portfolio Manager of the Adviser	February 2014

## Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only with authorized participants ("APs") and only in large blocks of 50,000 Shares (each block of Shares is called a "Creation Unit"), or multiples thereof ("Creation Unit Aggregations"), in exchange for the deposit or delivery of a basket of securities. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may be purchased and sold only on a national securities exchange through brokers. Shares are listed for trading on NYSE Arca, Inc. and because the Shares will trade at market prices rather than NAV, Shares may trade at prices greater than NAV (at a premium), at NAV, or less than NAV (at a discount).

## Tax Information

The Fund's distributions will generally be taxable, typically as either ordinary income or long-term capital gain, unless you are invested through a tax-deferred arrangement, such as a 401(k) plan or an individual retirement account; in such cases, taxation will be deferred until assets are withdrawn from the plan. A sale of Shares may result in capital gain or loss.

# PowerShares Build America Bond Portfolio

## Summary Information

### Investment Objective

The PowerShares Build America Bond Portfolio (the "Fund") seeks investment results that generally correspond to the price and yield (before fees and expenses) of The BofA Merrill Lynch Build America Bond Index (the "Underlying Index").

### Fund Fees and Expenses

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund ("Shares"). Investors may pay brokerage commissions on their purchases and sales of Shares, which are not reflected in the table or the example below.

#### Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.28%
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.28%

### Example

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. This example does not include brokerage commissions that investors may pay to buy and sell Shares. Although your actual costs may be higher or lower, your costs, based on these assumptions, would be:

1 Year	3 Years	5 Years	10 Years
\$29	\$90	\$157	\$356

### Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 9% of the average value of its portfolio.

### Principal Investment Strategies

The Fund generally will invest at least 80% of its total assets in taxable municipal securities eligible to participate in the Build America Bond program created under the American Recovery and Reinvestment Act of 2009 (the "Act") or other legislation providing for the issuance of taxable municipal securities on which the issuer receives federal support of the interest paid ("Build America Bonds") and that comprise the Underlying Index. The Underlying Index is designed to track the performance of U.S. dollar-denominated investment grade taxable municipal debt publicly issued under the Build America Bond program by U.S. states and territories, and their political subdivisions, in the U.S. market. Qualifying securities must have a minimum amount outstanding of \$1 million, at least 18 months remaining term to final maturity at the time of issuance and at least one year remaining term to final maturity, a fixed coupon schedule and an investment grade rating (based on

an average of Moody's Investors Services, Inc. ("Moody's"), Standard & Poor's, a division of The McGraw-Hill Company, Inc. ("S&P") and Fitch Ratings, Inc. ("Fitch").

Unlike most other municipal obligations, interest received on Build America Bonds is subject to federal and state income tax. Under the terms of the Act, issuers of "direct pay" Build America Bonds (i.e., taxable municipal bonds issued to provide funds for qualified capital expenditures) are entitled to receive payments from the U.S. Treasury over the life of the bond equal to 35% (or 45% in the case of Recovery Zone Economic Development Bonds) of the interest paid. The federal interest subsidy continues for the life of the bonds. The Underlying Index does not include bonds that, under the Build America Bond program, are eligible for tax credits.

Because Congress did not extend the Build America Bond program, issuance of Build America Bonds ceased on December 31, 2010. Outstanding Build America Bonds remain eligible for the federal interest rate subsidy, which continues for the life of the Build America Bonds; however, no bonds issued following expiration of the Build America Bond program are eligible for the federal tax subsidy. The Adviser will monitor the Fund's holdings and may propose changes to the Fund's investment strategies to the Board of Trustees (the "Board") of PowerShares Exchange-Traded Fund Trust II (the "Trust") that it believes are in the best interests of the Fund and its shareholders, including changing the Fund's investment strategy to invest in an index composed of a broader universe of taxable municipal securities. The Fund does not purchase all of the securities in the Underlying Index; instead, the Fund utilizes a "sampling" methodology to seek to achieve its investment objective.

**Concentration Policy.** The Fund will concentrate its investments (i.e., invest 25% or more of the value of its total assets) in securities of issuers in any one industry or sector only to the extent that the Underlying Index reflects a concentration in that industry or sector. The Fund will not otherwise concentrate its investments in securities of issuers in any one industry or sector.

### **Principal Risks of Investing in the Fund**

The following summarizes the principal risks of the Fund.

#### **The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.**

**Fixed-Income Securities Risk.** Fixed-income securities are subject to interest rate risk and credit risk. Interest rate risk refers to fluctuations in the value of a fixed-income security resulting from changes in the general level of interest rates. When the general level of interest rates goes up, the prices of most fixed-income securities go down. When the general level of interest rates goes down, the prices of most fixed-income securities go up. Fixed-income securities with longer maturities typically are more sensitive to changes in interest rates, making them more volatile than securities with shorter maturities. Credit risk refers to the possibility that the issuer of a security will be unable and/or unwilling to make timely interest payments and/or repay the principal on its debt. Debt instruments are subject to varying degrees of credit risk, which may be reflected in credit ratings. There is a possibility

that the credit rating of a fixed-income security may be downgraded after purchase, which may adversely affect the value of the security. Securities issued by the U.S. Government are subject to limited credit risk; however, securities issued by U.S. Government agencies are not necessarily backed by the full faith and credit of the U.S. Government.

**Changing Fixed-Income Market Conditions.** The current historically low interest rate environment was created in part by the Federal Reserve Board ("FRB") and certain foreign central banks keeping the federal funds and equivalent foreign rates at or near zero. The "tapering" in 2015 of the FRB's quantitative easing program, combined with the FRB's recent raising of the target range for the Federal Funds Rate (and likely eventual increase in equivalent foreign rates) may expose fixed-income markets to heightened volatility and reduced liquidity for certain fixed-income investments, particularly those with longer maturities, although it is difficult to predict the impact of this rate increase and any future rate increases on various markets. In addition, decreases in fixed-income dealer market-making capacity may also potentially lead to heightened volatility and reduced liquidity in the fixed-income markets. As a result, the value of the Fund's investments and Share price may decline. Changes in central bank policies could also result in higher than normal shareholder redemptions, which could potentially increase portfolio turnover rate and the Fund's transaction costs.

**Build America Bonds Risk.** Build America Bonds involve similar risks as municipal bonds, including credit and market risk. In particular, should a Build America Bond's issuer fail to continue to meet the applicable requirements imposed on the bonds as provided by the Act, it is possible that such issuer may not receive federal cash subsidy payments, impairing the issuer's ability to make scheduled interest payments. The Build America Bond program expired on December 31, 2010 and no further issuance is permitted unless Congress were to renew the program at a future date. As a result, the number of available Build America Bonds is limited, which may negatively affect the value of the Build America Bonds. In addition, there can be no assurance that Build America Bonds will be actively traded. It is difficult to predict the extent to which a market for such bonds will continue, meaning that Build America Bonds may experience greater illiquidity than other municipal obligations. The Build America Bonds outstanding as of December 31, 2010 will continue to be eligible for the federal interest rate subsidy, which continues for the life of the Build America Bonds; however, no bonds issued following expiration of the Build America Bond program will be eligible for the federal tax subsidy.

**Municipal Securities Risk.** Litigation, legislation or other political events, local business or economic conditions or the bankruptcy of the issuer could have a significant effect on the ability of an issuer of municipal securities to make payments of principal and/or interest. Political changes and uncertainties in the municipal market related to taxation, legislative changes or the rights of municipal security holders can significantly affect municipal securities. Because many securities are issued to finance similar projects, especially those relating to education, health care, transportation and utilities, conditions in those sectors can affect

the overall municipal market. In addition, changes in the financial condition of an individual municipal issuer can affect the overall municipal market.

**Call Risk.** If interest rates fall, it is possible that issuers of callable securities with high interest coupons will “call” (or prepay) their bonds before their maturity date. If an issuer exercised such a call during a period of declining interest rates, the Fund may have to replace such called security with a lower yielding security. If that were to happen, the Fund’s net investment income could fall.

**Market Risk.** Securities in the Underlying Index are subject to market fluctuations. You should anticipate that the value of the Shares will decline, more or less, in correlation with any decline in value of the securities in the Underlying Index.

**Market Trading Risk.** The Fund faces numerous market trading risks, including the potential lack of an active market for the Shares, losses from trading in secondary markets, and disruption in the creation/redemption process of the Fund. Any of these factors may lead to the Shares trading at a premium or discount to the Fund’s net asset value (“NAV”).

**Non-Correlation Risk.** The Fund’s return may not match the return of the Underlying Index for a number of reasons. For example, the Fund incurs operating expenses not applicable to the Underlying Index, and incurs costs in buying and selling securities, especially when rebalancing the Fund’s securities holdings to reflect changes in the composition of the Underlying Index. Because the Fund issues and redeems Creation Units (as defined below) principally for cash, it will incur higher costs in buying and selling securities than if it issued and redeemed Creation Units in-kind. Additionally, the Fund’s use of a representative sampling approach may cause the Fund not to be as well-correlated with the return of the Underlying Index as would be the case if the Fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. In addition, the performance of the Fund and the Underlying Index may vary due to asset valuation differences and differences between the Fund’s portfolio and the Underlying Index resulting from legal restrictions, costs or liquidity constraints.

**Sampling Risk.** The Fund’s use of a representative sampling approach will result in it holding a smaller number of securities than are in the Underlying Index. As a result, an adverse development to an issuer of securities that the Fund holds could result in a greater decline in NAV than would be the case if the Fund held all of the securities in the Underlying Index. To the extent the assets in the Fund are smaller, these risks will be greater.

**Cash Transaction Risk.** Unlike most exchange-traded funds (“ETFs”), the Fund currently intends to effect creations and redemptions principally for cash, rather than principally in-kind, due to the nature of the Fund’s investments. As such, an investment in Shares may be less tax efficient than an investment in shares of conventional ETFs, which utilize an entirely in-kind redemption process. Also, there may be a substantial difference in the after-tax rate of return between the Fund and conventional ETFs.

**Index Risk.** Unlike many investment companies, the Fund does not utilize an investing strategy that seeks returns in excess of its Underlying Index. Therefore, the Fund would not necessarily buy or sell a security unless that security is added or removed, respectively, from its Underlying Index, even if that security generally is underperforming.

**Issuer-Specific Changes.** The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

## Performance

The bar chart below shows how the Fund has performed. The table below the bar chart shows the Fund’s average annual total returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing how the Fund’s total return has varied from year to year and by showing how the Fund’s average annual total returns compared with a broad measure of market performance and additional indexes with characteristics relevant to the Fund. Although the information shown in the bar chart and the table gives you some idea of the risks involved in investing in the Fund, the Fund’s past performance (before and after taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at [www.invescopowershares.com](http://www.invescopowershares.com).

### Annual Total Returns—Calendar Years

### Best Quarter

11.22% (3rd Quarter 2011)

### Worst Quarter

(5.69)% (2nd Quarter 2013)

### Average Annual Total Returns for the Periods Ended December 31, 2015

After-tax returns in the table below are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor’s tax situation and may differ from those shown, and after-tax returns shown are not relevant to investors who hold Shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	1 Year	5 Year	Since Inception (11/17/09)
Return Before Taxes	0.92%	8.35%	7.90%
Return After Taxes on Distributions	(1.09)%	6.22%	5.82%

The BofA Merrill Lynch Build America Bond Index (reflects no deduction for fees, expenses or taxes)	1.04%	8.92%	8.01%
The BofA Merrill Lynch U.S. Corporate Master Index (reflects no deduction for fees, expenses or taxes)	(0.63)%	4.55%	5.18%
Barclays U.S. Aggregate Index (reflects no deduction for fees, expenses or taxes)	0.55%	3.25%	3.55%

## Management of the Fund

*Investment Adviser.* Invesco PowerShares Capital Management LLC (the "Adviser").

*Portfolio Managers.* The following individuals are responsible jointly and primarily for the day-to-day management of the Fund's portfolio:

Name	Title with Adviser/Trust	Date Began Managing the Fund
Peter Hubbard	Vice President and Director of Portfolio Management of the Adviser and Vice President of the Trust	Since Inception
Jeffrey W. Kernagis	Vice President and Senior Portfolio Manager of the Adviser	Since Inception
Gary Jones	Vice President and Portfolio Manager of the Adviser	January 2012
Philip Fang	Vice President and Portfolio Manager of the Adviser	Since Inception
Richard Ose	Vice President and Portfolio Manager of the Adviser	February 2014

## Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only with authorized participants ("APs") and only in large blocks of 50,000 Shares (each block of Shares is called a "Creation Unit"), or multiples thereof ("Creation Unit Aggregations"), in exchange for the deposit or delivery of cash. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may be purchased and sold only on a national securities exchange through brokers. Shares are listed for trading on NYSE Arca, Inc. and because the Shares will trade at market prices rather than NAV, Shares may trade at prices greater than NAV (at a premium), at NAV, or less than NAV (at a discount).

## Tax Information

The Fund's distributions will generally be taxable, typically as either ordinary income or long-term capital gain, unless you are invested through a tax-deferred arrangement, such as a 401(k) plan or an individual retirement account; in such cases, taxation will be deferred until assets are withdrawn from the plan. A sale of Shares may result in capital gain or loss.

# PowerShares California AMT-Free Municipal Bond Portfolio

## Summary Information

### Investment Objective

The PowerShares California AMT-Free Municipal Bond Portfolio (the "Fund") seeks investment results that generally correspond (before fees and expenses) to the price and yield of The BofA Merrill Lynch California Long-Term Core Plus Municipal Securities Index (the "Underlying Index").

### Fund Fees and Expenses

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund ("Shares"). Investors may pay brokerage commissions on their purchases and sales of Shares, which are not reflected in the table or the example below.

#### Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.28%
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.28%

### Example

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. This example does not include the brokerage commissions that investors may pay to buy and sell Shares. Although your actual costs may be higher or lower, your costs, based on these assumptions, would be:

1 Year	3 Years	5 Years	10 Years
\$29	\$90	\$157	\$356

### Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 3% of the average value of its portfolio.

### Principal Investment Strategies

The Fund generally will invest at least 80% of its total assets in municipal securities that comprise the Underlying Index and that also are exempt from the federal alternative minimum tax ("AMT"). The Underlying Index is composed of U.S. dollar-denominated, investment grade, tax-exempt debt publicly issued by California or any U.S. territory or their political subdivisions, in the U.S. domestic market with a term of at least 15 years remaining to final maturity. The Fund does not purchase all of the securities in the Underlying Index; instead, the Fund utilizes a "sampling" methodology to seek to achieve its investment objective.

*Concentration Policy.* The Fund will concentrate its investments (i.e., invest 25% or more of the value of its total assets) in securities of issuers in any one industry or sector only to the extent that the Underlying Index reflects a concentration in that industry or sector. The Fund will not otherwise concentrate its investments in securities of issuers in any one industry or sector.

### **Principal Risks of Investing in the Fund**

The following summarizes the principal risks of the Fund.

#### **The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.**

*Fixed-Income Securities Risk.* Fixed-income securities are subject to interest rate risk and credit risk. Interest rate risk refers to fluctuations in the value of a fixed-income security resulting from changes in the general level of interest rates. When the general level of interest rates goes up, the prices of most fixed-income securities go down. When the general level of interest rates goes down, the prices of most fixed-income securities go up. Fixed-income securities with longer maturities typically are more sensitive to changes in interest rates, making them more volatile than securities with shorter maturities. Credit risk refers to the possibility that the issuer of a security will be unable and/or unwilling to make timely interest payments and/or repay the principal on its debt. Debt instruments are subject to varying degrees of credit risk, which may be reflected in credit ratings. There is a possibility that the credit rating of a fixed-income security may be downgraded after purchase, which may adversely affect the value of the security.

*Changing Fixed-Income Market Conditions.* The current historically low interest rate environment was created in part by the Federal Reserve Board ("FRB") and certain foreign central banks keeping the federal funds and equivalent foreign rates at or near zero. The "tapering" in 2015 of the FRB's quantitative easing program, combined with the FRB's recent raising of the target range for the Federal Funds Rate (and likely eventual increase in equivalent foreign rates) may expose fixed-income markets to heightened volatility and reduced liquidity for certain fixed-income investments, particularly those with longer maturities, although it is difficult to predict the impact of this rate increase and any future rate increases on various markets. In addition, decreases in fixed-income dealer market-making capacity may also potentially lead to heightened volatility and reduced liquidity in the fixed-income markets. As a result, the value of the Fund's investments and Share price may decline. Changes in central bank policies could also result in higher than normal shareholder redemptions, which could potentially increase portfolio turnover rate and the Fund's transaction costs.

*Municipal Securities Risk.* Litigation, legislation or other political events, local business or economic conditions or the bankruptcy of the issuer could have a significant effect on the ability of an issuer of municipal securities to make payments of principal and/or interest. Political changes and uncertainties in the municipal market related to taxation, legislative changes or the rights of municipal security holders can significantly affect municipal securities. Because many securities are issued to finance similar

projects, especially those relating to education, health care, transportation and utilities, conditions in those sectors can affect the overall municipal market. In addition, changes in the financial condition of an individual municipal issuer can affect the overall municipal market. If the Internal Revenue Service ("IRS") determines that an issuer of a municipal security has not complied with applicable tax requirements, interest from the security could become taxable and the security could decline significantly in value.

*California Municipal Securities Risk.* Because the Fund invests a substantial portion of its assets in California municipal securities, the Fund will have greater exposure to negative political, economic and statutory factors within the State of California than certain funds that invest in a broader base of securities. Unfavorable developments in any economic sector may have a substantial impact on the overall California municipal market. While the California economy has been experiencing a gradual and broadening recovery since the last economic downturn, a number of risks that threaten the State's fiscal condition remain. In addition, provisions of the California Constitution and state statutes that limit the taxing and spending authority of California governmental entities may impair the ability of California issuers to pay principal and/or interest on their obligations. These factors heighten the risk that the prices of California municipal securities, and the Fund's net asset value ("NAV"), will experience greater volatility.

*Puerto Rican Municipal Securities Risk.* Adverse market, political, economic or other conditions or developments within Puerto Rico may negatively affect the value of the Fund's holdings in Puerto Rican municipal obligations. The Puerto Rican economy is reliant on manufacturing, services and tourism, and its economy and financial operations parallel the economic cycles of the United States. Current economic difficulties in the United States are likely to have an adverse impact on the overall economy of Puerto Rico. Moreover, like many other U.S. states and municipalities, Puerto Rico experienced a significant downturn during the recent recession. Puerto Rico continues to face significant fiscal challenges, including persistent government deficits, underfunded public pension benefit obligations, underfunded government retirement systems, sizable debt service obligations and a high unemployment rate. Many ratings organizations previously downgraded a number of securities issued in Puerto Rico or placed them on "negative watch." If the economic situation in Puerto Rico persists or worsens, the volatility, credit quality and performance of the Fund could be adversely affected.

*Municipal Insurance Risk.* A portion of the municipal securities that the Fund holds may be covered by insurance that guarantees the bond's scheduled payment of interest and repayment of principal. Municipal security insurance does not insure against market fluctuations or fluctuations in the Fund's Share price. In addition, a municipal security insurance policy will not cover: (i) repayment of a municipal security before maturity (redemption), (ii) prepayment or payment of an acceleration premium (except for a mandatory sinking fund redemption) or any other provision of a bond indenture that advances the maturity of the bond, or (iii) nonpayment of principal or interest caused by negligence or bankruptcy of the paying agent. A mandatory sinking fund

redemption may be a provision of a municipal security issue whereby part of the municipal security issue may be retired before maturity.

*State-Specific and U.S. Territories' Concentration Risk.* The Fund will be less diversified geographically than a fund investing across many states and therefore has greater exposure to adverse economic and political changes in California and Puerto Rico.

*Call Risk.* If interest rates fall, it is possible that issuers of callable securities with high interest coupons will "call" (or prepay) their bonds before their maturity date. If an issuer exercised such a call during a period of declining interest rates, the Fund may have to replace such called security with a lower yielding security. If that were to happen, the Fund's net investment income could fall.

*Tax Risk.* There is no guarantee that the Fund's income will be exempt from federal or state income taxes. Events occurring after the date of issuance of a municipal bond or after the Fund's acquisition of a municipal bond may result in a determination that interest on that bond is includible in gross income for federal income tax purposes retroactively to its date of issuance. Such a determination may cause a portion of prior distributions by the Fund to its shareholders to be taxable to those shareholders in the year of receipt. Federal or state changes in income or alternative minimum tax rates or in the tax treatment of municipal bonds may make municipal bonds less attractive as investments and cause them to lose value.

*Market Risk.* Securities in the Underlying Index are subject to market fluctuations. You should anticipate that the value of the Shares will decline, more or less, in correlation with any decline in value of the securities in the Underlying Index.

*Market Trading Risk.* The Fund faces numerous market trading risks, including the potential lack of an active market for the Shares, losses from trading in secondary markets, and disruption in the creation/redemption process of the Fund. Any of these factors may lead to the Shares trading at a premium or discount to the Fund's NAV.

*Sampling Risk.* The Fund's use of a representative sampling approach will result in it holding a smaller number of securities than are in the Underlying Index. As a result, an adverse development to an issuer of securities that the Fund holds could result in a greater decline in NAV than would be the case if the Fund held all of the securities in the Underlying Index. To the extent the assets in the Fund are smaller, these risks will be greater.

*Cash Transaction Risk.* Unlike most exchange-traded funds ("ETFs"), the Fund currently intends to effect creations and redemptions principally for cash, rather than principally in-kind, due to the nature of the Fund's investments. As such, an investment in Shares may be less tax efficient than an investment in shares of conventional ETFs, which utilize an entirely in-kind redemption process. Also, there may be a substantial difference in the after-tax rate of return between the Fund and conventional ETFs.

*Non-Correlation Risk.* The Fund's return may not match the return of the Underlying Index for a number of reasons. For example, the Fund incurs operating expenses not applicable to the Underlying Index, and incurs costs in buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Underlying Index. Because the Fund issues and redeems Creation Units (as defined below) principally for cash, it will incur higher costs in buying and selling securities than if it issued and redeemed Creation Units in-kind. Additionally, the Fund's use of a representative sampling approach may cause the Fund to not be as well-correlated with the return of the Underlying Index as would be the case if the Fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. In addition, the performance of the Fund and the Underlying Index may vary due to asset valuation differences and differences between the Fund's portfolio and the Underlying Index resulting from legal restrictions, costs or liquidity constraints.

*Index Risk.* Unlike many investment companies, the Fund does not utilize an investing strategy that seeks returns in excess of its Underlying Index. Therefore, it would not necessarily buy or sell a security unless that security is added or removed, respectively, from the Underlying Index, even if that security generally is underperforming.

*Non-Diversified Fund Risk.* Because the Fund is non-diversified and can invest a greater portion of its assets in securities of individual issuers than a diversified fund, changes in the market value of a single investment could cause greater fluctuations in Share price than would occur in a diversified fund. This may increase the Fund's volatility and cause the performance of a relatively small number of issuers to have a greater impact on the Fund's performance.

*Issuer-Specific Changes.* The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

## **Performance**

The bar chart below shows how the Fund has performed. The table below the bar chart shows the Fund's average annual total returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing how the Fund's total return has varied from year to year and by showing how the Fund's average annual total returns compared with a broad measure of market performance and an additional index with characteristics relevant to the Fund. Although the information shown in the bar chart and the table gives you some idea of the risks involved in investing in the Fund, the Fund's past performance (before and after taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at [www.invescopowershares.com](http://www.invescopowershares.com).

## Annual Total Returns—Calendar Years

### Best Quarter

11.03% (3rd Quarter 2009)

### Worst Quarter

(7.17)% (4th Quarter 2010)

## Average Annual Total Returns for the Periods Ended December 31, 2015

After-tax returns in the table below are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns shown are not relevant to investors who hold Shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	1 Year	5 Years	Since Inception (10/11/07)
Return Before Taxes	4.16%	6.85%	4.71%
Return After Taxes on Distributions	4.16%	6.85%	4.69%
Return After Taxes on Distributions and Sale of Fund Shares	3.76%	6.25%	4.55%
The BofA Merrill Lynch California Long-Term Core Plus Municipal Securities Index <sup>(1)</sup> (reflects no deduction for fees, expenses or taxes)	4.43%	N/A	N/A
Barclays Municipal Bond 20 Year Index (reflects no deduction for fees, expenses or taxes)	3.93%	7.08%	5.69%
Blended—The BofA Merrill Lynch California Long-Term Core Plus Municipal Securities Index <sup>(2)</sup> (reflects no deduction for fees, expenses or taxes)	4.43%	7.49%	5.33%

(1) Effective July 8, 2014, the Fund's underlying index changed to The BofA Merrill Lynch California Long-Term Core Plus Municipal Securities Index. "5 Years" and "Since Inception" information for the new underlying index is not available because the index did not commence until February 12, 2013.

(2) The data shown as "Blended" is composed of the returns through December 31, 2015 of the Fund's current underlying index, as well as two prior underlying indices tracked by the Fund. The Fund tracked The BofA Merrill Lynch California Insured Long-Term Core Municipal Securities Index from its inception until the conversion date of that index, May 29, 2009, and then tracked The BofA Merrill Lynch California Insured Long-Term Core Plus Municipal Securities Index starting at the conversion date and through July 8, 2014.

## Management of the Fund

**Investment Adviser.** Invesco PowerShares Capital Management LLC (the "Adviser").

**Portfolio Managers.** The following individuals are responsible jointly and primarily for the day-to-day management of the Fund's portfolio:

Name	Title with Adviser/Trust	Date Began Managing the Fund
Peter Hubbard	Vice President and Director of Portfolio Management of the Adviser and Vice President of the Trust	Since Inception
Jeffrey W. Kernagis	Vice President and Senior Portfolio Manager of the Adviser	Since Inception
Gary Jones	Vice President and Portfolio Manager of the Adviser	January 2012
Philip Fang	Vice President and Portfolio Manager of the Adviser	Since Inception
Richard Ose	Vice President and Portfolio Manager of the Adviser	February 2014

## Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only with authorized participants ("APs") and only in large blocks of 50,000 Shares (each block of Shares is called a "Creation Unit"), or multiples thereof ("Creation Unit Aggregations"), in exchange for the deposit or delivery of cash. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may be purchased and sold only on a national securities exchange through brokers. Shares are listed for trading on NYSE Arca, Inc. and because the Shares will trade at market prices rather than NAV, Shares may trade at prices greater than NAV (at a premium), at NAV, or less than NAV (at a discount).

## Tax Information

Dividends paid by the Fund that are properly reported as "exempt-interest dividends" will not be subject to federal income tax. The Fund intends to invest its assets in a manner such that at least 80% of its dividend distributions to shareholders will generally be attributable to interest that is exempt from federal income tax and will not be a tax preference item for purposes of the AMT. Such dividends, however, may be included in a corporate shareholder's "adjusted current earnings" for AMT purposes.

The Fund's distributions, other than from net tax-exempt income, will generally be taxable, typically as either ordinary income or long-term capital gain, unless you are invested through a tax-deferred arrangement, such as a 401(k) plan or an individual retirement account; in such cases, taxation will be deferred until assets are withdrawn from the plan. A sale of Shares may result in a taxable capital gain or loss.

# PowerShares CEF Income Composite Portfolio

## Summary Information

### Investment Objective

The PowerShares CEF Income Composite Portfolio (the "Fund") seeks investment results that generally correspond (before fees and expenses) to the price and yield of the S-Network Composite Closed-End Fund Index<sup>SM</sup> (the "Underlying Index").

### Fund Fees and Expenses

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund ("Shares"). Investors may pay brokerage commissions on their purchases and sales of Shares, which are not reflected in the table or the example below.

#### Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.50%
Other Expenses	0.00%
Acquired Fund Fees and Expenses <sup>(1)</sup>	1.44%
Total Annual Fund Operating Expenses	1.94%

(1) Acquired Fund Fees and Expenses are indirect fees and expenses that the Fund incurs from investing in the shares of Underlying Funds (as defined herein). The actual Acquired Fund Fees and Expenses will vary with changes in the allocations of the Fund's assets. These expenses are based on the total expense ratio of the Underlying Funds disclosed in each Underlying Fund's most recent shareholder report. Please note that the amount of Total Annual Fund Operating Expenses shown in the above table may differ from the ratio of expenses to average net assets included in the "Financial Highlights" section of this Prospectus, which reflects the operating expenses of the Fund and does not include indirect expenses such as Acquired Fund Fees and Expenses.

### Example

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. This example does not include the brokerage commissions that investors may pay to buy and sell Shares. Although your actual costs may be higher or lower, your costs, based on these assumptions, would be:

1 Year	3 Years	5 Years	10 Years
\$197	\$609	\$1,047	\$2,264

### Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 20% of the average value of its portfolio, excluding the value of portfolio securities received or delivered as a result of the Fund's in-kind creations and redemptions.

### Principal Investment Strategies

The Fund generally will invest at least 90% of its total assets in securities of U.S.-listed closed-end funds that comprise the Underlying Index. The Fund is a "fund of funds," as it

invests its assets in the common shares of funds included in the Underlying Index rather than in individual securities (the "Underlying Funds"). S-Network Global Indexes, LLC (the "Index Provider") compiles, maintains and calculates the Underlying Index, which tracks the overall performance of a universe of U.S.-listed closed-end funds that are organized under the laws of the United States, which may be invested in taxable investment grade fixed-income securities, taxable high yield fixed-income securities and taxable equity options. The Underlying Index may include closed-end funds that are advised by an affiliate of Invesco PowerShares Capital Management LLC (the "Adviser"). The Fund generally invests in all of the securities comprising its Underlying Index in proportion to their weightings in the Underlying Index.

*Concentration Policy.* The Fund will concentrate its investments (i.e., invest 25% or more of the value of its total assets) in securities of issuers in any one industry or sector only to the extent that the Underlying Index reflects a concentration in that industry or sector. The Fund will not otherwise concentrate its investments in securities of issuers in any one industry or sector.

### Principal Risks of the Fund

The following summarizes the principal risks of the Fund.

#### **The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.**

*Fund of Funds Risk.* Because the Fund is a fund of funds, its investment performance largely depends on the investment performance of the Underlying Funds in which it invests. An investment in the Fund is subject to the risks associated with the Underlying Funds that comprise the Underlying Index. The Fund will pay indirectly a proportional share of the fees and expenses of the Underlying Funds in which it invests, including their investment advisory and administration fees, while continuing to pay its own unitary management fee. As a result, shareholders will absorb duplicate levels of fees with respect to investments in the Underlying Funds. In addition, at times certain segments of the market represented by constituent Underlying Funds in the Underlying Index may be out of favor and underperform other segments.

*Risks of Investing in Closed-End Funds.* The shares of closed-end investment companies may trade at a discount or premium to, or at, their net asset value ("NAV"). The securities of closed-end investment companies in which the Fund may invest may be leveraged. As a result, the Fund may be exposed indirectly to leverage through an investment in such securities. An investment in securities of closed-end investment companies that use leverage may expose the Fund to higher volatility in the market value of such securities and the possibility that the Fund's long-term returns on such securities (and, indirectly, the long-term returns of the Shares) will be diminished.

The Fund is permitted to invest in Underlying Funds beyond the limits set forth in Section 12(d)(1) subject to certain terms and conditions set forth in an exemptive order that the SEC has issued to the Trust. To comply with provisions of the Investment Company Act of 1940, as amended (the "1940 Act"), on any matter upon which the Underlying Fund shareholders are solicited to

vote, the Adviser will vote Underlying Fund shares in the same general proportion as shares held by other shareholders of the Underlying Fund.

*Underlying Funds Risk.* The Fund may be subject to the following risks as a result of its investment in the Underlying Funds:

*Interest Rate Risk.* Fixed-income securities' prices generally fall as interest rates rise; conversely, fixed-income securities' prices generally rise as interest rates fall.

*Credit Risk.* Credit risk is the risk that issuers or guarantors of debt instruments or the counterparty to a derivatives contract, repurchase agreement or loan of portfolio securities is unable or unwilling to make timely interest and/or principal payments or to otherwise honor its obligations. Debt instruments are subject to varying degrees of credit risk, which may be reflected in credit ratings. There is the chance that any of an Underlying Fund's portfolio holdings will have its credit ratings downgraded or will default (fail to make scheduled interest or principal payments), potentially reducing the Underlying Fund's income level and share price.

*Non-Investment Grade Securities Risk.* Non-investment grade securities and unrated securities of comparable credit quality are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. These securities may be subject to greater price volatility due to such factors as specific corporate developments, interest rate sensitivity, negative perceptions of the non-investment grade securities markets generally, real or perceived adverse economic and competitive industry conditions and less secondary market liquidity. If the issuer of non-investment grade securities defaults, an Underlying Fund may incur additional expenses to seek recovery.

*Options Risk.* A decision as to whether, when and how to use options involves the exercise of skill and judgment, and even a well-conceived transaction may be unsuccessful to some degree because of market behavior or unexpected events. Because the exercise of an index option is settled in cash, sellers of index call options cannot provide in advance for their potential settlement obligations by acquiring and holding the underlying securities. An Underlying Fund will lose money if it is required to pay the purchaser of an index option the difference between the cash value of the index on which the option was written and the exercise price and such difference is greater than the premium received by the Underlying Fund for writing the option.

*Derivatives Risk.* A derivative instrument often has risks similar to its underlying instrument and may have additional risks, including imperfect correlation between the value of the derivative and the underlying instrument, risks of default by the counterparty to certain derivative transactions, magnification of losses incurred due to changes in the market value of the securities, instruments, indices or interest rates to which the derivative relates, and risks that the derivative instruments may not be liquid.

*Leverage Risk.* Leverage may result from ordinary borrowings, or may be inherent in the structure of certain Underlying Fund investments such as derivatives. If the prices of those investments decrease, or if the cost of borrowing exceeds any increase in the

prices of those investments, the net asset value of the Underlying Fund's Shares will decrease faster than if the Underlying Fund had not used leverage. To repay borrowings, an Underlying Fund may have to sell investments at a time and at a price that is unfavorable to the Underlying Fund. Interest on borrowings is an expense the Underlying Fund would not otherwise incur. Leverage magnifies the potential for gain and the risk of loss. If an Underlying Fund uses leverage, there can be no assurance that the Underlying Fund's leverage strategy will be successful.

*Counterparty Risk.* To the extent that an Underlying Fund engages in derivative transactions, it will be subject to credit risk with respect to the counterparties. The Underlying Fund may obtain only a limited or no recovery or may experience significant delays in obtaining recovery under derivative contracts if a counterparty experiences financial difficulties and becomes bankrupt or otherwise fails to perform its obligations under a derivative contract.

*Senior Loans Risk.* Investments in senior loans typically are below investment grade and are considered speculative because of the credit risk of their issuers. Such companies are more likely to default on their payments of interest and principal owed, and such defaults could reduce an Underlying Fund's NAV and income distributions. In addition, an Underlying Fund may have to sell securities at lower prices than it otherwise would to meet cash needs or it may have to maintain a greater portion of its assets in cash equivalents than it otherwise would because of impairments and limited liquidity of the collateral supporting a senior loan, which could negatively affect the Underlying Fund's performance.

*Foreign and Emerging Market Securities Risk.* Fluctuations in the value of the U.S. dollar relative to the values of other currencies may adversely affect investments in foreign and emerging market securities. Foreign and emerging market securities may have relatively low market liquidity, decreased publicly available information about issuers, and inconsistent and potentially less stringent accounting, auditing and financial reporting requirements and standards of practice comparable to those applicable to domestic issuers. Foreign and emerging market securities are subject to the risks of expropriation, nationalization or other adverse political or economic developments and the difficulty of enforcing obligations in other countries. Investments in foreign and emerging market securities also may be subject to dividend withholding or confiscatory taxes, currency blockage and/or transfer restrictions. Emerging markets are subject to greater market volatility, lower trading volume, political and economic instability, uncertainty regarding the existence of trading markets and more governmental limitations on foreign investment than more developed markets. In addition, securities in emerging markets may be subject to greater price fluctuations than securities in more developed markets.

*Liquidity Risk.* Closed-end funds are not limited in their ability to invest in illiquid securities. Securities with reduced liquidity involve greater risk than securities with more liquid markets. Market quotations for securities not traded on national exchanges may vary over time, and if the credit quality of a fixed-income security unexpectedly declines, secondary trading of that security may decline for a period of time. In the event that an Underlying Fund

voluntarily or involuntarily liquidates portfolio assets during periods of infrequent trading, it may not receive full value for those assets.

*Industry Concentration Risk.* An Underlying Fund from time to time may be concentrated to a significant degree in securities of issuers located in a single industry or a sector. To the extent that the Underlying Funds concentrate in the securities of issuers in a particular industry or sector, the Fund will also concentrate its investments to approximately the same extent on a pro rata basis. By concentrating its investments in an industry or sector, the Fund faces more risks than if it were diversified broadly over numerous industries or sectors. Such industry-based risks, any of which may adversely affect the companies in which the Fund invests, may include, but are not limited to, the following: general economic conditions or cyclical market patterns that could negatively affect supply and demand in a particular industry; competition for resources, adverse labor relations, political or world events; obsolescence of technologies; and increased competition or new product introductions that may affect the profitability or viability of companies in an industry. In addition, at times, such industry or sector may be out of favor and underperform other industries or the market as a whole.

*Inflation Risk.* The value of assets or income from investment will be worth less in the future as inflation decreases the value of money.

*Deflation Risk.* Prices throughout the economy may decline over time, which may have an adverse effect on the market valuation of companies, their assets and revenues. In addition, deflation may have an adverse effect on the creditworthiness of issuers and may make issuer default more likely, which may result in a decline in the value of an Underlying Fund's portfolio.

*Mortgage-Backed and Asset-Backed Securities Risk.* Investments in mortgage- and asset-backed securities are subject to prepayment or call risk, which is the risk that payments from the borrower may be received earlier than expected due to changes in the rate at which the underlying loans are prepaid. Securities may be prepaid at a price less than the original purchase value.

*Small- and Mid-Capitalization Company Risk.* Investing in securities of small- and mid-capitalization companies involves greater risk than customarily is associated with investing in larger, more established companies. These companies' securities may be more volatile and less liquid than those of more established companies. These companies' securities may be more volatile and less liquid than those of more established companies. These securities may have returns that vary, sometimes significantly, from the overall securities market. Often small- and mid-capitalization companies and the industries in which they focus are still evolving and, as a result, they may be more sensitive to changing market conditions.

*Developments in Financial Markets.* Developments in recent years in the global financial markets illustrate that the current environment is one of extraordinary and possibly unprecedented uncertainty. Conditions in markets in the U.S. and abroad over the past few years have caused firms in the financial services sector to take significant losses. The economic conditions have resulted,

and may continue to result, in an unusually high degree of volatility in the financial markets. Instability in the financial markets over the past several years has led governments and regulators around the world to take a number of unprecedented actions designed to support financial institutions and segments of the financial markets that have experienced extreme volatility, and in some cases a lack of liquidity. A significant decline in the value of an Underlying Fund's portfolio likely would result in a significant decline in the value of an investment in the Underlying Fund.

**Anti-Takeover Provisions Risk.** The organizational documents of certain of the Underlying Funds include provisions that could limit the ability of other entities or persons to acquire control of the Underlying Fund or to change the composition of its board, which could limit the ability of shareholders to sell their shares at a premium over prevailing market prices by discouraging a third party from seeking to obtain control of the Underlying Fund.

See "Additional Information About the Funds' Strategies and Risks—Risks of Investing in Underlying Funds."

**Market Risk.** The Underlying Funds are subject to market fluctuations. You should anticipate that the value of the Shares will decline, more or less, in correlation with any decline in value of the securities in the Underlying Funds.

**Market Trading Risk.** The Fund faces numerous market trading risks, including the potential lack of an active market for the Shares, losses from trading in secondary markets, and disruption in the creation/redemption process of the Fund. Any of these factors may lead to the Shares trading at a premium or discount to the Fund's NAV.

**Non-Correlation Risk.** The Fund's return may not match the return of the Underlying Index for a number of reasons. For example, the Fund incurs operating expenses not applicable to the Underlying Index, and incurs costs in buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Underlying Index. In addition, the performance of the Fund and the Underlying Index may vary due to asset valuation differences and differences between the Fund's portfolio and the Underlying Index resulting from legal restrictions, costs or liquidity constraints.

**Index Risk.** Unlike many investment companies, the Fund does not utilize an investing strategy that seeks returns in excess of its Underlying Index. Therefore, it would not necessarily buy or sell a security unless that security is added or removed, respectively, from the Underlying Index, even if that security generally is underperforming.

**Issuer-Specific Changes.** The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

**Commodity Pool Risk.** Certain investments by the Underlying Funds in which the Fund invests may cause the Fund to be deemed to be a commodity pool, thereby subjecting the Fund to regulation under the Commodity Exchange Act and CFTC rules. The Adviser is registered as a Commodity Pool Operator ("CPO"),

and the Fund will be operated in accordance with CFTC rules. Registration as a CPO subjects the Adviser to additional laws, regulations and enforcement policies, all of which could increase compliance costs and may affect the operations and financial performance of the Fund. Registration as a commodity pool may have negative effects on the ability of the Fund to engage in its planned investment program.

## Performance

The bar chart below shows how the Fund has performed. The table below the bar chart shows the Fund's average annual total returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing how the Fund's total return has varied from year to year and by showing how the Fund's average annual total returns compared with a broad measure of market performance and an additional index with characteristics relevant to the Fund. Although the information shown in the bar chart and the table gives you some idea of the risks involved in investing in the Fund, the Fund's past performance (before and after taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at [www.invescopowershares.com](http://www.invescopowershares.com).

### Annual Total Returns—Calendar Years

### Best Quarter

8.42% (1st Quarter 2012)

### Worst Quarter

(11.01)% (3rd Quarter 2011)

### Average Annual Total Returns for the Periods Ended December 31, 2015

After-tax returns in the table below are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns shown are not relevant to investors who hold Shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	1 Year	5 Years	Since Inception (02/19/10)
Return Before Taxes	(1.56)%	4.67%	5.42%
Return After Taxes on Distributions	(4.14)%	2.09%	2.87%
Return After Taxes on Distributions and Sale of Fund Shares	(0.65)%	2.64%	3.26%
S-Network Composite Closed-End Fund Index <sup>SM</sup> (reflects no deduction for fees, expenses or taxes)	(1.08)%	5.20%	5.93%
S&P 500 <sup>®</sup> Index	1.38%	12.57%	13.36%

## Management of the Fund

*Investment Adviser.* Invesco PowerShares Capital Management LLC (the “Adviser”).

*Portfolio Managers.* The following individuals are responsible jointly and primarily for the day-to-day management of the Fund’s portfolio:

<b>Name</b>	<b>Title with Adviser/Trust</b>	<b>Date Began Managing the Fund</b>
Peter Hubbard	Vice President and Director of Portfolio Management of the Adviser and Vice President of the Trust	Since Inception
Michael Jeanette	Vice President and Senior Portfolio Manager of the Adviser	Since Inception
Tony Seisser	Vice President and Portfolio Manager of the Adviser	February 2014
Jonathan Nixon	Vice President and Portfolio Manager of the Adviser	February 2015

## Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only with authorized participants (“APs”) and only in large blocks of 50,000 Shares (each block of Shares is called a “Creation Unit”), or multiples thereof (“Creation Unit Aggregations”), in exchange for the deposit or delivery of a basket of securities. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may be purchased and sold only on a national securities exchange through brokers. Shares are listed for trading on NYSE Arca, Inc. and because the Shares will trade at market prices rather than NAV, Shares may trade at prices greater than NAV (at a premium), at NAV, or less than NAV (at a discount).

## Tax Information

The Fund’s distributions will generally be taxable, typically as either ordinary income or long-term capital gain, unless you are invested through a tax-deferred arrangement, such as a 401(k) plan or an individual retirement account; in such cases, taxation will be deferred until assets are withdrawn from the plan. A sale of Shares may result in capital gain or loss.

# PowerShares Chinese Yuan Dim Sum Bond Portfolio

## Summary Information

### Investment Objective

The PowerShares Chinese Yuan Dim Sum Bond Portfolio (the “Fund”) seeks investment results that generally correspond (before fees and expenses) to the price and yield of the Citi Custom Dim Sum (Offshore CNY) Bond Index (the “Underlying Index”).

### Fund Fees and Expenses

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (“Shares”). Investors may pay brokerage commissions on their purchases and sales of Shares, which are not reflected in the table or the example below.

#### Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.45%
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.45%

### Example

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. This example does not include brokerage commissions that investors may pay to buy and sell Shares. Although your actual costs may be higher or lower, your costs, based on these assumptions, would be:

1 Year	3 Years	5 Years	10 Years
\$46	\$144	\$252	\$567

### Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund’s performance. During the most recent fiscal year, the Fund’s portfolio turnover rate was 26% of the average value of its portfolio.

### Principal Investment Strategies

The Fund generally will invest at least 80% of its total assets in Chinese Renminbi (“RMB”)-denominated bonds that comprise the Underlying Index. The Underlying Index measures the performance of RMB-denominated “Dim Sum” bonds that are issued and settled outside of mainland China. Dim Sum bonds are RMB-denominated and generally are issued in Hong Kong by a variety of entities ranging from governments to corporations.

The Underlying Index is designed to provide exposure to RMB-denominated bonds that are issued and settled outside of mainland China. Strictly in accordance with the Underlying Index’s guidelines and mandated procedures, securities must have a minimum maturity of one month and an outstanding amount of RMB 1 billion to be eligible for entry into the Underlying Index. There is no minimum rating requirement for inclusion in the Underlying Index. Securities with a maturity of less than one month are removed from the Underlying Index.

Index. The Underlying Index is composed of RMB-denominated bonds issued by governments, agencies, supranationals and corporations, excluding synthetics, convertible bonds, retail bonds and CDs. Citigroup Index LLC (the "Index Provider") rebalances the Underlying Index monthly. The Fund does not purchase all of the securities in the Underlying Index; instead, the Fund utilizes a "sampling" methodology to seek to achieve its investment objective.

*Concentration Policy.* The Fund will concentrate its investments (i.e., more than 25% of the value of its net assets) in securities of issuers in any one industry or sector only to the extent that the Underlying Index reflects a concentration in that industry or sector. The Fund will not otherwise concentrate its investments in securities of issuers in any one industry or sector.

### **Principal Risks of Investing in the Fund**

The following summarizes the principal risks of the Fund.

#### **The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.**

*Fixed-Income Securities Risk.* Fixed-income securities are subject to interest rate risk and credit risk. Interest rate risk refers to fluctuations in the value of a fixed-income security resulting from changes in the general level of interest rates. When the general level of interest rates goes up, the prices of most fixed-income securities go down. When the general level of interest rates goes down, the prices of most fixed-income securities go up. Fixed-income securities with longer maturities typically are more sensitive to changes in interest rates, making them more volatile than securities with shorter maturities. Credit risk refers to the possibility that the issuer of a security will be unable and/or unwilling to make timely interest payments and/or repay the principal on its debt. Debt instruments are subject to varying degrees of credit risk, which may be reflected in credit ratings. There is a possibility that the credit rating of a fixed-income security may be downgraded after purchase, which may adversely affect the value of the security.

*Changing Fixed-Income Market Conditions.* The current historically low interest rate environment was created in part by the Federal Reserve Board ("FRB") and certain foreign central banks keeping the federal funds and equivalent foreign rates at or near zero. The "tapering" in 2015 of the FRB's quantitative easing program, combined with the FRB's recent raising of the target range for the Federal Funds Rate (and likely eventual increase in equivalent foreign rates) may expose fixed-income markets to heightened volatility and reduced liquidity for certain fixed-income investments, particularly those with longer maturities, although it is difficult to predict the impact of this rate increase and any future rate increases on various markets. In addition, decreases in fixed-income dealer market-making capacity may also potentially lead to heightened volatility and reduced liquidity in the fixed-income markets. As a result, the value of the Fund's investments and Share price may decline. Changes in central bank policies could also result in higher than normal shareholder redemptions, which could potentially increase portfolio turnover rate and the Fund's transaction costs.

*Offshore Investor Risk.* There are special risks associated with investing in securities designed to provide exposure to Chinese RMB, such as RMB-denominated bonds in which the Fund will invest. The Chinese government maintains strict currency controls and regularly intervenes in the currency market. The Chinese government's actions may not be transparent or predictable. As a result, the value of the RMB, and the value of RMB-denominated securities, may change quickly and arbitrarily. These limitations and restrictions may impact the availability, liquidity, and pricing of securities designed to provide offshore investors with exposure to Chinese markets.

As a result, returns achieved by offshore investors, such as the Fund, could differ from those available to domestic investors in China.

*Capital Controls Risk.* Adverse economic conditions, such as unfavorable or volatile currency exchange rates and interest rates, political events or other conditions may cause the Chinese government to intervene and impose "capital controls." Capital controls include the prohibition of, or restrictions on, the ability to transfer currency, securities or other assets. In addition, this intervention may lead to levies placed on profits repatriated by foreign entities (such as the Fund). The Chinese government's imposition of capital controls can impact the ability of the Fund to buy, sell or otherwise transfer securities or currency, may adversely affect the trading market and price for Shares, and may cause the Fund to decline in value.

*Global Bonds Risk.* Global bonds are subject to the same risks as other debt issues, notably credit risk, market risk, interest rate risk and liquidity risk. Investments in the securities of non-U.S. issuers involve risks beyond those associated with investments in U.S. securities, including greater market volatility, the availability of less reliable financial information, higher transactional costs, taxation by foreign governments, decreased market liquidity and political instability.

*Currency Risk.* The Fund invests at least 80% of its assets in Chinese RMB-denominated bonds issued and settled outside of mainland China. Because the Fund's net asset value ("NAV") is determined in U.S. dollars, the NAV could decline if the currency of the non-U.S. market in which the Fund invests depreciates against the U.S. dollar, even if the value of the Fund's holdings increases, as measured in the foreign currency, including securities denominated in the Chinese RMB. The RMB currently is not a freely convertible currency. The government of China maintains strict currency controls. As a result, the value of the RMB, and the value of securities designed to provide exposure to the RMB, such as RMB-denominated bonds issued by offshore issuers, can change quickly. These and other factors could have a negative impact on the Fund's performance and increase the volatility of an investment in the Fund. The Chinese government's policies on currency, control and repatriation restrictions are subject to change, and the Fund's or the shareholders' position may be adversely affected. In addition, if the Chinese currencies, the RMB, which is traded in mainland China, and the Yuan, which is traded offshore (traded as "CNH" in Hong Kong), diverge in value, that divergence could negatively impact the Fund.

*Liquidity Risk.* Liquidity risk exists when a particular investment is difficult to purchase or sell. If the Fund invests in illiquid securities or current portfolio securities become illiquid, it may reduce the returns of the Fund because the Fund may be unable to sell the illiquid securities at an advantageous time or price. The Underlying Index consists of RMB-denominated debt securities issued or distributed outside mainland China, however, the quantity of such debt securities that are available for inclusion in the Underlying Index, and thus for the Fund to invest in, currently is limited.

*Call Risk.* If interest rates fall, it is possible that issuers of callable securities with high interest coupons will “call” (or prepay) their bonds before their maturity date. If an issuer exercised such a call during a period of declining interest rates, the Fund may have to replace such called security with a lower yielding security. If that were to happen, the Fund’s net investment income could fall.

*Valuation Risk.* Financial information related to securities of non-U.S. issuers may be less reliable than information related to securities of U.S. issuers, which may make it difficult to obtain a current price for a non-U.S. security held by the Fund. In certain circumstances, market quotations may not be readily available for some Fund securities, and those securities may be fair valued. The value established for a security through fair valuation may be different from what would be produced if the security had been valued using market quotations. Fund securities that are valued using techniques other than market quotations, including “fair valued” securities, may be subject to greater fluctuation in their value from one day to the next than would be the case if market quotations were used. In addition, there is no assurance that the Fund could sell a portfolio security for the value established for it at any time, and it is possible that the Fund would incur a loss because a security is sold at a discount to its established value.

*Sovereign Debt Risk.* Investments in sovereign debt securities involve special risks. The governmental authority that controls the repayment of the debt may be unwilling or unable to repay the principal and/or interest when due in accordance with the terms of such securities due to the extent of its foreign reserves; the availability of sufficient foreign exchange on the date a payment is due; the relative size of the debt service burden to the economy as a whole; or the government debtor’s policy towards the International Monetary Fund and the political constraints to which a government debtor may be subject. If an issuer of sovereign debt defaults on payments of principal and/or interest, the Fund may have limited legal recourse against the issuer and/or guarantor. In certain cases, remedies must be pursued in the courts of the defaulting party itself, and the Fund’s ability to obtain recourse may be limited.

*Market Risk.* Securities in the Underlying Index are subject to market fluctuations. You should anticipate that the value of the Shares will decline, more or less, in correlation with any decline in the value of the securities in the Underlying Index.

*Market Trading Risk.* The Fund faces numerous market trading risks, including the potential lack of an active market for the Shares, losses from trading in secondary markets, and disruption in the creation/redemption process of the Fund. Any of these factors may lead to the Shares trading at a premium or discount to the Fund’s NAV.

*Sampling Risk.* The Fund’s use of a representative sampling approach will result in it holding a smaller number of bonds than are in the Underlying Index. As a result, an adverse development to an issuer of bonds that the Fund holds could result in a greater decline in NAV than would be the case if the Fund held all of the bonds in the Underlying Index. To the extent the assets in the Fund are smaller, these risks will be greater.

*Cash Transaction Risk.* Unlike most exchange-traded funds (“ETFs”), the Fund currently intends to effect creations and redemptions principally for cash, rather than principally in-kind, due to the nature of the Fund’s investments. As such, an investment in Shares may be less tax efficient than an investment in shares of conventional ETFs, which utilize an entirely in-kind redemption process. Also, there may be a substantial difference in the after-tax rate of return between the Fund and conventional ETFs.

*Industry Concentration Risk.* The Underlying Index from time to time may be concentrated to a significant degree in securities of issuers located in a single industry or sector. To the extent that the Underlying Index concentrates in the securities of issuers in a particular industry or sector, the Fund will also concentrate its investments to approximately the same extent. By concentrating its investments in an industry or sector, the Fund faces more risks than if it were diversified broadly over numerous industries or sectors. Such industry-based risks, any of which may adversely affect the companies in which the Fund invests, may include, but are not limited to, the following: general economic conditions or cyclical market patterns that could negatively affect supply and demand in a particular industry; competition for resources, adverse labor relations, political or world events; obsolescence of technologies; and increased competition or new product introductions that may affect the profitability or viability of companies in an industry. In addition, at times, such industry or sector may be out of favor and underperform other industries or the market as a whole.

*Non-Correlation Risk.* The Fund’s return may not match the return of the Underlying Index for a number of reasons. For example, the Fund incurs operating expenses not applicable to the Underlying Index, and incurs costs in buying and selling securities, especially when rebalancing the Fund’s securities holdings to reflect changes in the composition of the Underlying Index. Because the Fund issues and redeems Creation Units (as defined below) principally for cash, it will incur higher costs in buying and selling securities than if it issued and redeemed Creation Units in-kind. Additionally, the Fund’s use of a representative sampling approach may cause the Fund not to be as well correlated with the return of the Underlying Index as would be the case if the Fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. In addition, the performance of the Fund and the Underlying Index may vary due to asset valuation differences and differences between the Fund’s portfolio and the Underlying Index resulting from legal restrictions, costs or liquidity constraints.

*Index Risk.* Unlike many investment companies, the Fund does not utilize an investing strategy that seeks returns in excess of its Underlying Index. Therefore, the Fund would not necessarily buy

or sell a security unless that security is added or removed, respectively, from its Underlying Index, even if that security generally is underperforming.

*Issuer-Specific Changes.* The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

## Performance

The bar chart below shows how the Fund has performed. The table below the bar chart shows the Fund's average annual total returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing how the Fund's total return has varied from year to year and by showing how the Fund's average annual total returns compared with a broad measure of market performance and an additional index with characteristics relevant to the Fund. Although the information shown in the bar chart and the table gives you some idea of the risks involved in investing in the Fund, the Fund's past performance (before and after taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at [www.invescopowershares.com](http://www.invescopowershares.com).

### Annual Total Returns—Calendar Years

### Best Quarter

3.09% (1st Quarter 2012)

### Worst Quarter

(3.43)% (3rd Quarter 2015)

### Average Annual Total Returns for the Periods Ended December 31, 2015

After-tax returns in the table below are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns shown are not relevant to investors who hold Shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	1 Year	Since Inception (09/23/11)
Return Before Taxes	(3.29)%	2.30%
Return After Taxes on Distributions	(3.52)%	1.29%
Return After Taxes on Distributions and Sale of Fund Shares	(1.86)%	1.35%
Citi Custom Dim Sum (Offshore CNY) Bond Index (reflects no deduction for fees, expenses or taxes)	(2.12)%	3.16%
Barclays China Aggregate Index (reflects no deduction for fees, expenses or taxes)	3.95%	5.38%

## Management of the Fund

*Investment Adviser.* Invesco PowerShares Capital Management LLC (the "Adviser").

*Portfolio Managers.* The following individuals are responsible jointly and primarily for the day-to-day management of the Fund's portfolio:

Name	Title with Adviser/Trust	Date Began Managing the Fund
Peter Hubbard	Vice President and Director of Portfolio Management of the Adviser and Vice President of the Trust	Since Inception
Jeffrey W. Kernagis	Vice President and Senior Portfolio Manager of the Adviser	Since Inception
Gary Jones	Vice President and Portfolio Manager of the Adviser	January 2012
Philip Fang	Vice President and Portfolio Manager of the Adviser	Since Inception
Richard Ose	Vice President and Portfolio Manager of the Adviser	February 2014

## Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only with authorized participants ("APs") and only in large blocks of 50,000 Shares (each block of Shares is called a "Creation Unit"), or multiples thereof ("Creation Unit Aggregations"), in exchange for the deposit or delivery of cash. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may be purchased and sold only on a national securities exchange through brokers. Shares are listed for trading on NYSE Arca, Inc. and because the Shares will trade at market prices rather than NAV, Shares may trade at prices greater than NAV (at a premium), at NAV, or less than NAV (at a discount).

## Tax Information

The Fund's distributions will generally be taxable, typically as either ordinary income or long-term capital gain, unless you are invested through a tax-deferred arrangement, such as a 401(k) plan or an individual retirement account; in such cases, taxation will be deferred until assets are withdrawn from the plan. A sale of Shares may result in capital gain or loss.

# PowerShares Emerging Markets Sovereign Debt Portfolio

## Summary Information

### Investment Objective

The PowerShares Emerging Markets Sovereign Debt Portfolio (the "Fund") seeks investment results that generally correspond (before fees and expenses) to the price and yield of the DBIQ Emerging Market USD Liquid Balanced Index (the "Underlying Index").

### Fund Fees and Expenses

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund ("Shares"). Investors may pay brokerage commissions on their purchases and sales of Shares, which are not reflected in the table or the example below.

#### Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.50%
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.50%

### Example

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. This example does not include the brokerage commissions that investors may pay to buy and sell Shares. Although your actual costs may be higher or lower, your costs, based on these assumptions, would be:

1 Year	3 Years	5 Years	10 Years
\$51	\$160	\$280	\$628

### Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 27% of the average value of its portfolio, excluding the value of portfolio securities received or delivered as a result of the Fund's in-kind creations and redemptions.

### Principal Investment Strategies

The Fund generally will invest at least 80% of its total assets in U.S. dollar-denominated government bonds from emerging market countries that comprise the Underlying Index. The Underlying Index measures potential returns of a theoretical portfolio of liquid emerging market U.S. dollar-denominated government bonds. Strictly in accordance with its guidelines and mandated procedures, Deutsche Bank Securities Inc. ("DB" or the "Index Provider") selects one to three securities from each of the emerging market countries set forth below that (i) are denominated in U.S. dollars, (ii) are sovereign bonds, (iii) have at

least three years to maturity, and (iv) have an outstanding float of at least \$500 million. Historically, the Underlying Index has included bonds issued by the governments of Brazil, Colombia, Croatia, El Salvador, Hungary, Indonesia, Latvia, Lithuania, Mexico, Panama, Peru, the Philippines, Poland, Qatar, Romania, Russia, South Africa, South Korea, Sri Lanka, Turkey, Ukraine, Uruguay and Venezuela; however, this universe of countries may change in accordance with DB's determination of eligible emerging market countries and there is no assurance that a particular country will be represented in the Underlying Index at any given time. The Fund does not purchase all of the securities in the Underlying Index; instead, the Fund utilizes a "sampling" methodology to seek to achieve its investment objective.

*Concentration Policy.* The Fund will concentrate its investments (i.e., invest 25% or more of the value of its total assets) in securities of issuers in any one industry or sector only to the extent that the Underlying Index reflects a concentration in that industry or sector. The Fund will not otherwise concentrate its investments in securities of issuers in any one industry or sector.

### **Principal Risks of Investing in the Fund**

The following summarizes the principal risks of the Fund.

#### **The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.**

*Fixed-Income Securities Risk.* Fixed-income securities are subject to interest rate risk and credit risk. Interest rate risk refers to fluctuations in the value of a fixed-income security resulting from changes in the general level of interest rates. When the general level of interest rates goes up, the prices of most fixed-income securities go down. When the general level of interest rates goes down, the prices of most fixed-income securities go up. Fixed-income securities with longer maturities typically are more sensitive to changes in interest rates, making them more volatile than securities with shorter maturities. Credit risk refers to the possibility that the issuer of a security will be unable and/or unwilling to make timely interest payments and/or repay the principal on its debt. Debt instruments are subject to varying degrees of credit risk, which may be reflected in credit ratings. There is a possibility that the credit rating of a fixed-income security may be downgraded after purchase, which may adversely affect the value of the security.

*Changing Fixed-Income Market Conditions.* The current historically low interest rate environment was created in part by the Federal Reserve Board ("FRB") and certain foreign central banks keeping the federal funds and equivalent foreign rates at or near zero. The "tapering" in 2015 of the FRB's quantitative easing program, combined with the FRB's recent raising of the target range for the Federal Funds Rate (and likely eventual increase in equivalent foreign rates) may expose fixed-income markets to heightened volatility and reduced liquidity for certain fixed-income investments, particularly those with longer maturities, although it is difficult to predict the impact of this rate increase and any future rate increases on various markets. In addition, decreases in fixed-income dealer market-making capacity may also potentially lead to heightened volatility and reduced liquidity in the fixed-income

markets. As a result, the value of the Fund's investments and Share price may decline. Changes in central bank policies could also result in higher than normal shareholder redemptions, which could potentially increase portfolio turnover rate and the Fund's transaction costs.

*Sovereign Debt Risk.* Risks of sovereign debt include the availability of sufficient foreign exchange on the date a payment is due, the relative size of the debt service burden to the economy as a whole, and the government debtor's policy towards the International Monetary Fund and the political constraints to which a government debtor may be subject. The governmental authority that controls the repayment of sovereign debt may be unwilling or unable to repay the principal and/or interest when due in accordance with the terms of such securities due to the extent of its foreign reserves. If an issuer of sovereign debt defaults on payments of principal and/or interest, the Fund may have limited legal recourse against the issuer and/or guarantor. In certain cases, remedies must be pursued in the courts of the defaulting party itself, and the Fund's ability to obtain recourse may be limited.

*Emerging Markets Sovereign Debt Risk.* Government obligors in emerging market countries are among the world's largest debtors to commercial banks, other governments, international financial organizations and other financial institutions. Historically, certain issuers of the government debt securities in which the Fund may invest have experienced substantial difficulties in meeting their external debt obligations, resulting in defaults on certain obligations and the restructuring of certain indebtedness. Such restructuring arrangements have included obtaining additional credit to finance outstanding obligations and the reduction and rescheduling of payments of interest and principal through the negotiation of new or amended credit agreements.

*Global Bonds Risk.* Global bonds are subject to the same risks as other debt issues, notably credit risk, market risk, interest rate risk and liquidity risk. Investments in the securities of non-U.S. issuers involve risks beyond those associated with investments in U.S. securities, including greater market volatility, the availability of less reliable financial information, higher transactional costs, taxation by foreign governments, decreased market liquidity and political instability.

*Non-Investment Grade Securities Risk.* Non-investment grade securities and unrated securities of comparable credit quality are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. These securities may be subject to greater price volatility due to such factors as specific corporate developments, interest rate sensitivity, negative perceptions of the non-investment grade securities markets generally, real or perceived adverse economic and competitive industry conditions and less secondary market liquidity. If the issuer of non-investment grade securities defaults, the Fund may incur additional expenses to seek recovery.

*Liquidity Risk.* Liquidity risk exists when a particular investment is difficult to purchase or sell. If the Fund invests in illiquid securities or current portfolio securities become illiquid, it may reduce the returns of the Fund because the Fund may be unable to sell the illiquid securities at an advantageous time or price.

**Call Risk.** If interest rates fall, it is possible that issuers of callable securities with high interest coupons will “call” (or prepay) their bonds before their maturity date. If an issuer exercised such a call during a period of declining interest rates, the Fund may have to replace such called security with a lower yielding security. If that were to happen, the Fund’s net investment income could fall.

**Valuation Risk.** Financial information related to securities of non-U.S. issuers may be less reliable than information related to securities of U.S. issuers, which may make it difficult to obtain a current price for a non-U.S. security held by the Fund. In certain circumstances, market quotations may not be readily available for some Fund securities, and those securities may be fair valued. The value established for a security through fair valuation may be different from what would be produced if the security had been valued using market quotations. Fund securities that are valued using techniques other than market quotations, including “fair valued” securities, may be subject to greater fluctuation in their value from one day to the next than would be the case if market quotations were used. In addition, there is no assurance that the Fund could sell a portfolio security for the value established for it at any time, and it is possible that the Fund would incur a loss because a security is sold at a discount to its established value.

**Market Risk.** Securities in the Underlying Index are subject to market fluctuations. You should anticipate that the value of the Shares will decline, more or less, in correlation with any decline in value of the securities in the Underlying Index.

**Market Trading Risk.** The Fund faces numerous market trading risks, including the potential lack of an active market for the Shares, losses from trading in secondary markets, and disruption in the creation/redemption process of the Fund. Any of these factors may lead to the Shares trading at a premium or discount to the Fund’s net asset value (“NAV”).

**Non-Correlation Risk.** The Fund’s return may not match the return of the Underlying Index for a number of reasons. For example, the Fund incurs operating expenses not applicable to the Underlying Index, and incurs costs in buying and selling securities, especially when rebalancing the Fund’s securities holdings to reflect changes in the composition of the Underlying Index. Additionally, the Fund’s use of a representative sampling approach may cause the Fund not to be as well-correlated with the return of the Underlying Index as would be the case if the Fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. In addition, the performance of the Fund and the Underlying Index may vary due to asset valuation differences and differences between the Fund’s portfolio and the Underlying Index resulting from legal restrictions, costs or liquidity constraints.

**Sampling Risk.** The Fund’s use of a representative sampling approach will result in it holding a smaller number of securities than are in the Underlying Index. As a result, an adverse development to an issuer of securities that the Fund holds could result in a greater decline in NAV than would be the case if the Fund held all of the securities in the Underlying Index. To the extent the assets in the Fund are smaller, these risks will be greater.

**Index Risk.** Unlike many investment companies, the Fund does not utilize an investing strategy that seeks returns in excess of its Underlying Index. Therefore, the Fund would not necessarily buy or sell a security unless that security is added or removed, respectively, from its Underlying Index, even if that security generally is underperforming.

**Non-Diversified Fund Risk.** Because the Fund is non-diversified and can invest a greater portion of its assets in securities of individual issuers than a diversified fund, changes in the market value of a single investment could cause greater fluctuations in Share price than would occur in a diversified fund. This may increase the Fund’s volatility and cause the performance of a relatively small number of issuers to have a greater impact on the Fund’s performance.

**Issuer-Specific Changes.** The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

## Performance

The bar chart below shows how the Fund has performed. The table below the bar chart shows the Fund’s average annual total returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing how the Fund’s total return has varied from year to year and by showing how the Fund’s average annual total returns compared with a broad measure of market performance and an additional index with characteristics relevant to the Fund. Although the information shown in the bar chart and the table gives you some idea of the risks involved in investing in the Fund, the Fund’s past performance (before and after taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at [www.invescopowershares.com](http://www.invescopowershares.com).

### Annual Total Returns—Calendar Years

### Best Quarter

13.16% (2nd Quarter 2009)

### Worst Quarter

(8.74)% (4th Quarter 2008)

### Average Annual Total Returns for the Periods Ended December 31, 2015

After-tax returns in the table below are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor’s tax situation and may differ from those shown, and after-tax returns shown are not relevant to investors who hold Shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	1 Year	5 Years	Since Inception (10/11/07)
Return Before Taxes	1.99%	5.65%	6.53%
Return After Taxes on Distributions	(0.33)%	3.59%	4.37%
Return After Taxes on Distributions and Sale of Fund Shares	1.12%	3.49%	4.18%
DBIQ Emerging Market USD Liquid Balanced Index (reflects no deduction for fees, expenses or taxes)	2.52%	6.54%	7.68%
J.P. Morgan Emerging Markets Bond Index Global (reflects no deduction for fees, expenses or taxes)	1.23%	5.11%	6.43%

## Management of the Fund

*Investment Adviser.* Invesco PowerShares Capital Management LLC (the “Adviser”).

*Portfolio Managers.* The following individuals are responsible jointly and primarily for the day-to-day management of the Fund’s portfolio:

Name	Title with Adviser/Trust	Date Began Managing the Fund
Peter Hubbard	Vice President and Director of Portfolio Management of the Adviser and Vice President of the Trust	Since Inception
Jeffrey W. Kernagis	Vice President and Senior Portfolio Manager of the Adviser	Since Inception
Gary Jones	Vice President and Portfolio Manager of the Adviser	January 2012
Phillip Fang	Vice President and Portfolio Manager of the Adviser	Since inception
Richard Ose	Vice President and Portfolio Manager of the Adviser	February 2014

## Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only with authorized participants (“APs”) and only in large blocks of 100,000 Shares (each block of Shares is called a “Creation Unit”), or multiples thereof (“Creation Unit Aggregations”), in exchange for the deposit or delivery of a basket of securities. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may be purchased and sold only on a national securities exchange through brokers. Shares are listed for trading on NYSE Arca, Inc. and because the Shares will trade at market prices rather than NAV, Shares may trade at prices greater than NAV (at a premium), at NAV, or less than NAV (at a discount).

## Tax Information

The Fund’s distributions will generally be taxable, typically as either ordinary income or long-term capital gain, unless you are invested through a tax-deferred arrangement, such as a 401(k) plan or an individual retirement account; in such cases, taxation will be deferred until assets are withdrawn from the plan. A sale of Shares may result in capital gain or loss.

# PowerShares Fundamental High Yield<sup>®</sup> Corporate Bond Portfolio

## Summary Information

### Investment Objective

The PowerShares Fundamental High Yield<sup>®</sup> Corporate Bond Portfolio (the “Fund”) seeks investment results that generally correspond (before fees and expenses) to the price and yield of the RAFI<sup>®</sup> Bonds US High Yield 1-10 Index (the “Underlying Index”).

### Fund Fees and Expenses

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (“Shares”). Investors may pay brokerage commissions on their purchases and sales of Shares, which are not reflected in the table or the example below.

#### Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.50%
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.50%

### Example

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. This example does not include the brokerage commissions that investors may pay to buy and sell Shares. Although your actual costs may be higher or lower, your costs, based on these assumptions, would be:

1 Year	3 Years	5 Years	10 Years
\$51	\$160	\$280	\$628

### Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund’s performance. During the most recent fiscal year, the Fund’s portfolio turnover rate was 16% of the average value of its portfolio, excluding the value of portfolio securities received or delivered as a result of the Fund’s in-kind creations and redemptions.

### Principal Investment Strategies

The Fund generally will invest at least 80% of its total assets in high-yield corporate bonds that comprise the Underlying Index. The Underlying Index is comprised of U.S. dollar-denominated bonds which are SEC-registered securities or Rule 144A securities with registration rights (issued after July 31, 2013) and whose issuers are public companies listed on a major U.S. stock exchange. Only investible, non-convertible, non-exchangeable, non-zero, fixed coupon high-yield corporate bonds qualify for inclusion in the Underlying Index. Bonds of foreign agencies, governments or supra-nationals, as well as those issuers

that are not domiciled in the United States, are excluded from the Underlying Index. RYAN ALM, Inc. compiles and calculates the Underlying Index, which measures potential returns based on the Fundamental Index<sup>®</sup> approach developed by Research Affiliates, LLC ("RA" or the "Index Provider"). The Fund does not purchase all of the securities in the Underlying Index; instead, the Fund utilizes a "sampling" methodology to seek to achieve its investment objective.

*Concentration Policy.* The Fund will concentrate its investments (i.e., invest 25% or more of the value of its total assets) in securities of issuers in any one industry or sector only to the extent that the Underlying Index reflects a concentration in that industry or sector. The Fund will not otherwise concentrate its investments in securities of issuers in any one industry or sector.

### **Principal Risks of Investing in the Fund**

The following summarizes the principal risks of the Fund.

#### **The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.**

*Fixed-Income Securities Risk.* Fixed-income securities are subject to interest rate risk and credit risk. Interest rate risk refers to fluctuations in the value of a fixed-income security resulting from changes in the general level of interest rates. When the general level of interest rates goes up, the prices of most fixed-income securities go down. When the general level of interest rates goes down, the prices of most fixed-income securities go up. Fixed-income securities with longer maturities typically are more sensitive to changes in interest rates, making them more volatile than securities with shorter maturities. Credit risk refers to the possibility that the issuer of a security will be unable and/or unwilling to make timely interest payments and/or repay the principal on its debt. Debt instruments are subject to varying degrees of credit risk, which may be reflected in credit ratings. There is a possibility that the credit rating of a fixed-income security may be downgraded after purchase, which may adversely affect the value of the security.

*Changing Fixed-Income Market Conditions.* The current historically low interest rate environment was created in part by the Federal Reserve Board ("FRB") and certain foreign central banks keeping the federal funds and equivalent foreign rates at or near zero. The "tapering" in 2015 of the FRB's quantitative easing program, combined with the FRB's recent raising of the target range for the Federal Funds Rate (and likely eventual increase in equivalent foreign rates) may expose fixed-income markets to heightened volatility and reduced liquidity for certain fixed-income investments, particularly those with longer maturities, although it is difficult to predict the impact of this rate increase and any future rate increases on various markets. In addition, decreases in fixed-income dealer market-making capacity may also potentially lead to heightened volatility and reduced liquidity in the fixed-income markets. As a result, the value of the Fund's investments and Share price may decline. Changes in central bank policies could also result in higher than normal shareholder redemptions, which could potentially increase portfolio turnover rate and the Fund's transaction costs.

*Non-Investment Grade Securities Risk.* Non-investment grade securities and unrated securities of comparable credit quality are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. These securities may be subject to greater price volatility due to such factors as specific corporate developments, interest rate sensitivity, negative perceptions of the non-investment grade securities markets generally, real or perceived adverse economic and competitive industry conditions and less secondary market liquidity. If the issuer of non-investment grade securities defaults, the Fund may incur additional expenses to seek recovery.

*Liquidity Risk.* Liquidity risk exists when a particular investment is difficult to purchase or sell. If the Fund invests in illiquid securities or current portfolio securities become illiquid, it may reduce the returns of the Fund because the Fund may be unable to sell the illiquid securities at an advantageous time or price.

*Call Risk.* If interest rates fall, it is possible that issuers of callable securities with high interest coupons will "call" (or prepay) their bonds before their maturity date. If an issuer exercised such a call during a period of declining interest rates, the Fund may have to replace such called security with a lower yielding security. If that were to happen, the Fund's net investment income could fall.

*Market Risk.* Securities in the Underlying Index are subject to market fluctuations. You should anticipate that the value of the Shares will decline, more or less, in correlation with any decline in value of the securities in the Underlying Index.

*Market Trading Risk.* The Fund faces numerous market trading risks, including the potential lack of an active market for the Shares, losses from trading in secondary markets, and disruption in the creation/redemption process of the Fund. Any of these factors may lead to the Shares trading at a premium or discount to the Fund's net asset value ("NAV").

*Non-Correlation Risk.* The Fund's return may not match the return of the Underlying Index for a number of reasons. For example, the Fund incurs operating expenses not applicable to the Underlying Index, and incurs costs in buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Underlying Index. The Fund's use of a representative sampling approach may cause the Fund not to be as well-correlated with the return of the Underlying Index as would be the case if the Fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. In addition, the performance of the Fund and the Underlying Index may vary due to asset valuation differences and differences between the Fund's portfolio and the Underlying Index resulting from legal restrictions, costs or liquidity constraints.

*Sampling Risk.* The Fund's use of a representative sampling approach will result in it holding a smaller number of securities than are in the Underlying Index. As a result, an adverse development to an issuer of securities that the Fund holds could result in a greater decline in NAV than would be the case if the Fund held all of the securities in the Underlying Index. To the extent the assets in the Fund are smaller, these risks will be greater.

**Index Risk.** Unlike many investment companies, the Fund does not utilize an investing strategy that seeks returns in excess of its Underlying Index. Therefore, it would not necessarily buy or sell a security unless that security is added or removed, respectively, from the Underlying Index, even if that security generally is underperforming.

**Issuer-Specific Changes.** The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

## Performance

The bar chart below shows how the Fund has performed. The table below the bar chart shows the Fund's average annual total returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing how the Fund's total return has varied from year to year and by showing how the Fund's average annual total returns compared with a broad measure of market performance and an additional index with characteristics relevant to the Fund. Although the information shown in the bar chart and the table gives you some idea of the risks involved in investing in the Fund, the Fund's past performance (before and after taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at [www.invescopowershares.com](http://www.invescopowershares.com).

### Annual Total Returns—Calendar Years

#### Best Quarter

14.36% (2nd Quarter 2009)

#### Worst Quarter

(21.43)% (4th Quarter 2008)

### Average Annual Total Returns for the Periods Ended December 31, 2015

After-tax returns in the table below are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns shown are not relevant to investors who hold Shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	1 Year	5 Years	Since Inception (11/15/07)
Return Before Taxes	(2.62)%	4.19%	2.26%
Return After Taxes on Distributions	(4.47)%	2.21%	(0.15)%
Return After Taxes on Distributions and Sale of Fund Shares	(1.45)%	2.42%	0.72%
RAFI® Bonds US High Yield 1-10 Index <sup>(1)</sup> (reflects no deduction for fees, expenses or taxes)	(1.85)%	5.29%	N/A
Barclays U.S. Corporate High Yield Index (reflects no deduction for fees, expenses or taxes)	(4.47)%	5.04%	6.89%
Blended-RAFI® Bonds US High Yield 1-10 Index <sup>(2)</sup> (reflects no deduction for fees, expenses or taxes)	(1.85)%	5.29%	4.36%

- (1) Effective August 2, 2010, the Fund's underlying index is the RAFI™ High Yield Bond Index (which subsequently was renamed the RAFI™ Bonds US High Yield 1-10 Index). Prior to August 2, 2010, the Fund's original underlying index was the Wells Fargo® High Yield Bond Index. "Since Inception" performance for the RAFI™ Bonds US High Yield 1-10 Index is not available because the Index did not commence calculation and publication until December 31, 2009.
- (2) The data shown as "Blended" is comprised of the performance of the Fund's original underlying index (Wells Fargo® High Yield Bond Index) from Fund inception through the index conversion date, August 2, 2010, followed by the performance of the new underlying index starting at the index conversion date and through December 31, 2015.

## Management of the Fund

**Investment Adviser.** Invesco PowerShares Capital Management LLC (the "Adviser").

**Portfolio Managers.** The following individuals are responsible jointly and primarily for the day-to-day management of the Fund's portfolio:

Name	Title with Adviser/Trust	Date Began Managing Fund
Peter Hubbard	Vice President and Director of Portfolio Management of the Adviser and Vice President of the Trust	Since Inception
Jeffrey W. Kernagis	Vice President and Senior Portfolio Manager of the Adviser	Since Inception
Gary Jones	Vice President and Portfolio Manager of the Adviser	January 2012
Philip Fang	Vice President and Portfolio Manager of the Adviser	Since inception
Richard Ose	Vice President and Portfolio Manager of the Adviser	February 2014

## Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only with authorized participants ("APs") and only in large blocks of 100,000 Shares (each block of Shares is called a "Creation Unit"), or multiples thereof ("Creation Unit Aggregations"), in exchange for the deposit or delivery of a basket of securities. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may be purchased and sold only on a national securities exchange through brokers. Shares are listed for trading on NYSE Arca, Inc. and because the Shares will trade at market prices rather than NAV, Shares may trade at prices greater than NAV (at a premium), at NAV, or less than NAV (at a discount).

**Tax Information**

The Fund's distributions will generally be taxable, typically as either ordinary income or long-term capital gain, unless you are invested through a tax-deferred arrangement, such as a 401(k) plan or an individual retirement account; in such cases, taxation will be deferred until assets are withdrawn from the plan. A sale of Shares may result in capital gain or loss.

# PowerShares Fundamental Investment Grade Corporate Bond Portfolio

## Summary Information

### Investment Objective

The PowerShares Fundamental Investment Grade Corporate Bond Portfolio (the "Fund") seeks investment results that generally correspond (before fees and expenses) to the price and yield of the RAFI™ Bonds US Investment Grade 1-10 Index (the "Underlying Index").

### Fund Fees and Expenses

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund ("Shares"). Investors may pay brokerage commissions on their purchases and sales of Shares, which are not reflected in the table or the example below.

#### Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.22%
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.22%

### Example

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. This example does not include the brokerage commissions that investors may pay to buy and sell Shares. Although your actual costs may be higher or lower, your costs, based on these assumptions, would be:

1 Year	3 Years	5 Years	10 Years
\$23	\$71	\$124	\$280

### Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 16% of the average value of its portfolio, excluding the value of portfolio securities received or delivered as a result of the Fund's in-kind creations and redemptions.

### Principal Investment Strategies

The Fund generally will invest at least 80% of its total assets in the component securities that comprise the Underlying Index. The Underlying Index is comprised of U.S. dollar-denominated bonds which are SEC-registered securities or Rule 144A securities with registration rights (issued after July 31, 2013) and whose issuers are public companies listed on a major U.S. stock exchange. Only investible, non-convertible, non-exchangeable, non-zero, fixed coupon investment grade corporate bonds qualify for inclusion in the Underlying Index. Bonds of foreign agencies, governments or supra-nationals, as well as

those issuers that are not domiciled in the United States are excluded from the Underlying Index. Ryan ALM, Inc. compiles and calculates the Underlying Index, which measures potential returns based on a methodology approach developed by Research Affiliates, LLC ("RA" or the "Index Provider") utilizing fundamental measures. The Fund does not purchase all of the securities in the Underlying Index; instead, the Fund utilizes a "sampling" methodology to seek to achieve its investment objective.

*Concentration Policy.* The Fund will concentrate its investments (i.e., invest more than 25% of the value of its net assets) in securities of issuers in any one industry or sector only to the extent that the Underlying Index reflects a concentration in that industry or sector. The Fund will not otherwise concentrate its investments in securities of issuers in any one industry or sector.

### **Principal Risks of Investing in the Fund**

The following summarizes the principal risks of the Fund.

#### **The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.**

*Fixed-Income Securities Risk.* Fixed-income securities are subject to interest rate risk and credit risk. Interest rate risk refers to fluctuations in the value of a fixed-income security resulting from changes in the general level of interest rates. When the general level of interest rates goes up, the prices of most fixed-income securities go down. When the general level of interest rates goes down, the prices of most fixed-income securities go up. Fixed-income securities with longer maturities typically are more sensitive to changes in interest rates, making them more volatile than securities with shorter maturities. Credit risk refers to the possibility that the issuer of a security will be unable and/or unwilling to make timely interest payments and/or repay the principal on its debt. Debt instruments are subject to varying degrees of credit risk, which may be reflected in credit ratings. There is a possibility that the credit rating of a fixed-income security may be downgraded after purchase, which may adversely affect the value of the security.

*Changing Fixed-Income Market Conditions.* The current historically low interest rate environment was created in part by the Federal Reserve Board ("FRB") and certain foreign central banks keeping the federal funds and equivalent foreign rates at or near zero. The "tapering" in 2015 of the FRB's quantitative easing program, combined with the FRB's recent raising of the target range for the Federal Funds Rate (and likely eventual increase in equivalent foreign rates) may expose fixed-income markets to heightened volatility and reduced liquidity for certain fixed-income investments, particularly those with longer maturities, although it is difficult to predict the impact of this rate increase and any future rate increases on various markets. In addition, decreases in fixed-income dealer market-making capacity may also potentially lead to heightened volatility and reduced liquidity in the fixed-income markets. As a result, the value of the Fund's investments and Share price may decline. Changes in central bank policies could also result in higher than normal shareholder redemptions, which could potentially increase portfolio turnover rate and the Fund's transaction costs.

*Liquidity Risk.* Liquidity risk exists when a particular investment is difficult to purchase or sell. If the Fund invests in illiquid securities or current portfolio securities become illiquid, it may reduce the returns of the Fund because the Fund may be unable to sell the illiquid securities at an advantageous time or price.

*Call Risk.* If interest rates fall, it is possible that issuers of callable securities with high interest coupons will "call" (or prepay) their bonds before their maturity date. If an issuer exercised such a call during a period of declining interest rates, the Fund may have to replace such called security with a lower yielding security. If that were to happen, the Fund's net investment income could fall.

*Market Risk.* Securities in the Underlying Index are subject to market fluctuations. You should anticipate that the value of the Shares will decline, more or less, in correlation with any decline in value of the securities in the Underlying Index.

*Market Trading Risk.* The Fund faces numerous market trading risks, including the potential lack of an active market for the Shares, losses from trading in secondary markets, and disruption in the creation/redemption process of the Fund. Any of these factors may lead to the Shares trading at a premium or discount to the Fund's net asset value ("NAV").

*Sampling Risk.* The Fund's use of a representative sampling approach will result in it holding a smaller number of securities than are in the Underlying Index. As a result, an adverse development to an issuer of securities that the Fund holds could result in a greater decline in NAV than would be the case if the Fund held all of the securities in the Underlying Index. To the extent the assets in the Fund are smaller, these risks will be greater.

*Industry Concentration Risk.* The Underlying Index from time to time may be concentrated to a significant degree in securities of issuers located in a single industry or a sector. To the extent that the Underlying Index concentrates in the securities of issuers in a particular industry or sector, the Fund will also concentrate its investments to approximately the same extent. By concentrating its investments in an industry or sector, the Fund faces more risks than if it were diversified broadly over numerous industries or sectors. Such industry-based risks, any of which may adversely affect the companies in which the Fund invests, may include, but are not limited to, the following: general economic conditions or cyclical market patterns that could negatively affect supply and demand in a particular industry; competition for resources, adverse labor relations, political or world events; obsolescence of technologies; and increased competition or new product introductions that may affect the profitability or viability of companies in an industry. In addition, at times, such industry or sector may be out of favor and underperform other industries or the market as a whole.

*Non-Correlation Risk.* The Fund's return may not match the return of the Underlying Index for a number of reasons. For example, the Fund incurs operating expenses not applicable to the Underlying Index, and incurs costs in buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Underlying Index. The Fund's use of a representative sampling approach may cause the Fund not to be

as well-correlated with the return of the Underlying Index as would be the case if the Fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. In addition, the performance of the Fund and the Underlying Index may vary due to asset valuation differences and differences between the Fund's portfolio and the Underlying Index resulting from legal restrictions, costs or liquidity constraints.

**Index Risk.** Unlike many investment companies, the Fund does not utilize an investing strategy that seeks returns in excess of its Underlying Index. Therefore, it would not necessarily buy or sell a security unless that security is added or removed, respectively, from the Underlying Index, even if that security generally is underperforming.

**Issuer-Specific Changes.** The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

## Performance

The bar chart below shows how the Fund has performed. The table below the bar chart shows the Fund's average annual total returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing how the Fund's total return has varied from year to year and by showing how the Fund's average annual total returns compared with a broad measure of market performance and an additional index with characteristics relevant to the Fund. Although the information shown in the bar chart and the table gives you some idea of the risks involved in investing in the Fund, the Fund's past performance (before and after taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at [www.invescopowershares.com](http://www.invescopowershares.com).

### Annual Total Returns—Calendar Years

#### Best Quarter

2.57% (3rd Quarter 2012)

#### Worst Quarter

(2.83)% (2nd Quarter 2013)

### Average Annual Total Returns for the Periods Ended December 31, 2015

After-tax returns in the table below are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns shown are not relevant to investors who hold Shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	1 Year	Since Inception (09/15/11)
Return Before Taxes	0.75%	2.62%
Return After Taxes on Distributions	(0.35)%	1.64%
Return After Taxes on Distributions and Sale of Fund Shares	0.43%	1.59%
RAFI™ Bonds US Investment Grade 1-10 Index (reflects no deduction for fees, expenses or taxes)	1.18%	3.19%
Barclays U.S. Corporate Index (reflects no deduction for fees, expenses or taxes)	(0.68)%	3.90%

## Management of the Fund

**Investment Adviser.** Invesco PowerShares Capital Management LLC (the "Adviser").

**Portfolio Managers.** The following individuals are responsible jointly and primarily for the day-to-day management of the Fund's portfolio:

Name	Title with Adviser/Trust	Date Began Managing the Fund
Peter Hubbard	Vice President and Director of Portfolio Management of the Adviser and Vice President of the Trust	Since Inception
Jeffrey W. Kernagis	Vice President and Senior Portfolio Manager of the Adviser	Since Inception
Gary Jones	Vice President and Portfolio Manager of the Adviser	January 2012
Philip Fang	Vice President and Portfolio Manager of the Adviser	Since Inception
Richard Ose	Vice President and Portfolio Manager of the Adviser	February 2014

## Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only with authorized participants ("APs") and only in large blocks of 50,000 Shares (each block of Shares is called a "Creation Unit"), or multiples thereof ("Creation Unit Aggregations"), in exchange for the deposit or delivery of a basket of securities. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may be purchased and sold only on a national securities exchange through brokers. Shares are listed for trading on NYSE Arca, Inc. and because the Shares will trade at market prices rather than NAV, Shares may trade at prices greater than NAV (at a premium), at NAV, or less than NAV (at a discount).

## Tax Information

The Fund's distributions will generally be taxable, typically as either ordinary income or long-term capital gain, unless you are invested through a tax-deferred arrangement, such as a 401(k) plan or an individual retirement account; in such cases, taxation will be deferred until assets are withdrawn from the plan. A sale of Shares may result in capital gain or loss.

# PowerShares Global Short Term High Yield Bond Portfolio

## Summary Information

### Investment Objective

The PowerShares Global Short Term High Yield Bond Portfolio (the “Fund”) seeks investment results that generally correspond (before fees and expenses) to the price and yield of the DB Global Short Maturity High Yield Bond Index (the “Underlying Index”).

### Fund Fees and Expenses

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (“Shares”). Investors may pay brokerage commissions on their purchases and sales of Shares, which are not reflected in the table or the example below.

#### Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.35%
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.35%

### Example

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. This example does not include the brokerage commissions that investors may pay to buy and sell Shares. Although your actual costs may be higher or lower, your costs, based on these assumptions, would be:

1 Year	3 Years	5 Years	10 Years
\$36	\$113	\$197	\$443

### Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund’s performance. During the most recent fiscal year, the Fund’s portfolio turnover rate was 50% of the average value of its portfolio, excluding the value of portfolio securities received or delivered as a result of the Fund’s in-kind creations and redemptions.

### Principal Investment Strategies

The Fund generally will invest at least 80% of its total assets in U.S. and foreign short-term, non-investment grade bonds included in the Underlying Index, all of which are denominated in U.S. dollars. Strictly in accordance with its guidelines and mandated procedures, Deutsche Bank Securities Inc. (“DB” or the “Index Provider”) selects such bonds issued by corporations, as well as sovereign, sub-sovereign or quasi-government entities, from a universe of eligible securities for inclusion in the Underlying Index that: (i) are denominated in U.S. dollars; (ii) are rated below “investment grade” (i.e., have a

“composite rating” from DB of no greater than “BB+,” but no less than “C”); (iii) have three years or less to maturity; and (iv) have a fixed coupon.

Eligible bonds must be rated by at least one of Standard & Poor’s Ratings Group, a division of The McGraw-Hill Companies, Inc. (“S&P”), Moody’s Investors Service, Inc. (“Moody’s”) or Fitch Ratings Inc. (“Fitch”). DB converts all available ratings for each bond into a numerical score, and then calculates an average score for each bond from those available ratings that corresponds to DB’s “composite rating” system.

Eligible bonds include either “short-term” bonds (i.e., bonds that have three years or less until maturity from the date they were issued) or “long-term seasoned” bonds (i.e., bonds that had a maturity longer than three years at the date they were issued, but currently have three years or less until maturity). To be eligible for inclusion in the Underlying Index, a “short-term” bond (excluding Eurodollar bonds) must have a minimum amount outstanding of at least \$100 million, and a “long-term seasoned” bond (excluding Eurodollar bonds) must have a minimum amount outstanding of at least \$250 million. Short-term Eurodollar bonds must have more than \$200 million outstanding and long-term seasoned Eurodollar bonds must have more than \$350 million outstanding. The Fund does not purchase all of the securities in the Underlying Index; instead, the Fund utilizes a “sampling” methodology to seek to achieve its investment objective.

**Concentration Policy.** The Fund will concentrate its investments (i.e., invest more than 25% of the value of its net assets) in securities of issuers in any one industry or group of industries only to the extent that the Underlying Index reflects a concentration in that industry or group of industries. The Fund will not otherwise concentrate its investments in securities of issuers in any one industry or group of industries.

### **Principal Risks of Investing in the Fund**

The following summarizes the principal risks of the Fund.

#### **The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.**

**Fixed-Income Securities Risk.** Fixed-income securities are subject to interest rate risk and credit risk. Interest rate risk refers to fluctuations in the value of a fixed-income security resulting from changes in the general level of interest rates. When the general level of interest rates goes up, the prices of most fixed-income securities go down. When the general level of interest rates goes down, the prices of most fixed income securities go up. Credit risk refers to the possibility that the issuer of a security will be unable and/or unwilling to make timely interest payments and/or repay the principal on its debt. Debt instruments are subject to varying degrees of credit risk, which may be reflected in credit ratings. There is a possibility that the credit rating of a fixed-income security may be downgraded after purchase, which may adversely affect the value of the security.

**Changing Fixed-Income Market Conditions.** The current historically low interest rate environment was created in part by the Federal Reserve Board (“FRB”) and certain foreign central banks keeping

the federal funds and equivalent foreign rates at or near zero. The “tapering” in 2015 of the FRB’s quantitative easing program, combined with the FRB’s recent raising of the target range for the Federal Funds Rate (and likely eventual increase in equivalent foreign rates) may expose fixed-income markets to heightened volatility and reduced liquidity for certain fixed-income investments, particularly those with longer maturities, although it is difficult to predict the impact of this rate increase and any future rate increases on various markets. In addition, decreases in fixed-income dealer market-making capacity may also potentially lead to heightened volatility and reduced liquidity in the fixed-income markets. As a result, the value of the Fund’s investments and Share price may decline. Changes in central bank policies could also result in higher than normal shareholder redemptions, which could potentially increase portfolio turnover rate and the Fund’s transaction costs.

**Short-Term Bond Risk.** The Fund will invest in bonds with a short term (i.e., three years or less) until maturity. The amount of time until a fixed-income security matures can lead to various risks, including changes in interest rates over the life of a bond. Short-term fixed income securities generally provide lower returns than longer-term fixed income securities. The average maturity of the Fund’s investments will affect the volatility of the Fund’s share price.

**Non-Investment Grade Securities Risk.** Non-investment grade securities are considered speculative and are subject to the increased risk of an issuer’s inability to meet principal and interest payment obligations. These securities may be subject to greater price volatility due to such factors as specific corporate developments, interest rate sensitivity, negative perceptions of the non-investment grade securities markets generally, real or perceived adverse economic and competitive industry conditions and less secondary market liquidity. If the issuer of a non-investment grade security defaults, the Fund may incur additional expenses to seek recovery.

**Global Bonds Risk.** Global bonds are subject to the same risks as other debt securities, notably credit risk, market risk, interest rate risk and liquidity risk. Investments in the securities of non-U.S. issuers involve risks beyond those associated with investments in U.S. securities, including greater market volatility, the availability of less reliable financial information, higher transactional costs, taxation by foreign governments, decreased market liquidity and political instability.

**Foreign Investment Risk.** Investments in the securities of non-U.S. issuers involve risks beyond those associated with investments in U.S. securities. Foreign securities may have relatively low market liquidity, greater market volatility, decreased publicly available information, and less reliable financial information about issuers, and inconsistent and potentially less stringent accounting, auditing and financial reporting requirements and standards of practice comparable to those applicable to domestic issuers. Foreign securities also are subject to the risks of expropriation, nationalization, political instability or other adverse political or economic developments and the difficulty of enforcing obligations in other countries. Investments in foreign securities also may be subject to dividend withholding or confiscatory taxes, currency blockage

and/or transfer restrictions and higher transactional costs. As the Fund will invest in securities denominated in foreign currencies, fluctuations in the value of the U.S. dollar relative to the values of other currencies may adversely affect investments in foreign securities and may negatively impact the Fund's returns.

*Sovereign Debt Risk.* Risks of sovereign debt include the relative size of the debt burden to the economy as a whole and the government debtor's policy towards the International Monetary Fund and the political constraints to which a government debtor may be subject. The governmental authority that controls the repayment of sovereign debt may be unwilling or unable to repay the principal and/or interest when due in accordance with the terms of such securities due to the extent of its foreign reserves. If an issuer of sovereign debt defaults on payments of principal and/or interest, the Fund may have limited legal recourse against the issuer and/or guarantor. In certain cases, remedies must be pursued in the courts of the defaulting party itself, and the Fund's ability to obtain recourse may be limited.

*Sub-Sovereign Debt Risk.* Sub-sovereign government bonds represent the debt of state, provincial, territorial, municipal, local or other political sub-divisions, including other governmental entities or agencies, other than sovereign governments. In addition to risks of investing in sovereign debt generally, risks of investing in sub-sovereign debt include the fact that such investments may or may not be issued by, or guaranteed as to principal and interest by, the sub-sovereign's larger sovereign entity. Certain foreign sub-sovereign securities may be backed by the issuer's right to borrow from a central bank or other regional banking entity, while others may be backed only by the assets and credit of the issuing foreign sub-sovereign entity.

*Supranational Entities Risk.* The Fund may invest in obligations issued or guaranteed by supranational entities, which may include, for example, entities such as the International Bank for Reconstruction and Development (the World Bank). If one or more shareholders of a supranational entity fails to make necessary additional capital contributions, the entity may be unable to pay interest or repay principal on its debt securities, and the Fund may lose money on such investments.

*Liquidity Risk.* Liquidity risk exists when a particular investment is difficult to purchase or sell. If the Fund invests in illiquid securities or current portfolio securities become illiquid, it may reduce the returns of the Fund because the Fund may be unable to sell the illiquid securities at an advantageous time or price.

*Call Risk.* If interest rates fall, it is possible that issuers of callable securities with high interest coupons will "call" (or prepay) their bonds before their maturity date. If an issuer exercised such a call during a period of declining interest rates, the Fund may have to replace such called security with a lower yielding security. If that were to happen, the Fund's net investment income could fall.

*Valuation Risk.* Financial information related to securities of non-U.S. issuers may be less reliable than information related to securities of U.S. issuers, which may make it difficult to obtain a current price for a non-U.S. security held by the Fund. In certain circumstances, market quotations may not be readily available for some Fund securities, and those securities may be fair valued. The

value established for a security through fair valuation may be different from what would be produced if the security had been valued using market quotations. Fund securities that are valued using techniques other than market quotations, including "fair valued" securities, may be subject to greater fluctuation in their value from one day to the next than would be the case if market quotations were used. In addition, there is no assurance that the Fund could sell a portfolio security for the value established for it at any time, and it is possible that the Fund would incur a loss because a security is sold at a discount to its established value.

*Valuation Time Risk.* The Fund will invest in foreign bonds and, because foreign exchanges may be open on days when the Fund does not price its Shares, the value of the non-U.S. securities in the Fund's portfolio may change on days when you will not be able to purchase or sell your Shares. As a result, trading spreads and the resulting premium or discount on the Shares may widen, and, therefore, increase the difference between the market price of the Shares and the net asset value ("NAV") of such Shares.

*Market Risk.* Securities in the Underlying Index are subject to market fluctuations. You should anticipate that the value of the Shares will decline, more or less, to the same extent as any decline in value of the securities in the Underlying Index.

*Market Trading Risk.* The Fund faces numerous market trading risks, including the potential lack of an active market for the Shares, losses from trading in secondary markets, and disruption in the creation/redemption process of the Fund. Any of these factors may lead to the Shares trading at a premium or discount to the Fund's NAV.

*Geographic Concentration Risk.* The Fund may invest a significant portion of its total assets in securities of issuers from a specific country or geographic region. A natural or other disaster could occur in a country or geographic region in which the Fund invests, which could affect the economy or particular business operations of companies in that specific country or geographic region and adversely impact the Fund's investments in the affected country or region.

*Non-Correlation Risk.* The Fund's return may not exactly match the return of the Underlying Index for a number of reasons. For example, the Fund incurs operating expenses not applicable to the Underlying Index, and incurs costs in buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Underlying Index. Additionally, the Fund's use of a representative sampling approach may cause the Fund not to be as well correlated with the return of the Underlying Index as would be the case if the Fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. In addition, the performance of the Fund and the Underlying Index may vary due to asset valuation differences and differences between the Fund's portfolio and the Underlying Index resulting from legal restrictions, costs or liquidity constraints.

*Sampling Risk.* Although it may hold as many securities as necessary to achieve its investment objective, the Fund, by using a representative sampling approach, generally will hold a smaller number of securities than the Underlying Index. As a result, an

adverse development to an issuer of securities that the Fund holds could result in a greater decline in NAV than would be the case if the Fund held all of the securities in the Underlying Index. To the extent the assets in the Fund are smaller, these risks will be greater.

**Index Risk.** Unlike many investment companies, the Fund does not utilize an investing strategy that seeks returns in excess of its Underlying Index. Therefore, the Fund would not necessarily buy or sell a security unless that security is added or removed, respectively, from its Underlying Index, even if that security generally is underperforming.

**Non-Diversified Fund Risk.** Because the Fund is non-diversified and can invest a greater portion of its assets in securities of individual issuers than a diversified fund, changes in the market value of a single investment could cause greater fluctuations in Share price than would occur in a diversified fund. This may increase the Fund's volatility and cause the performance of a relatively small number of issuers to have a greater impact on the Fund's performance.

**Issuer-Specific Changes.** The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

## Performance

The bar chart below shows how the Fund has performed. The table below the bar chart shows the Fund's average annual total returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing how the Fund's total return has varied from year to year and by showing how the Fund's average annual total return compared with a broad measure of market performance and an additional index with characteristics relevant to the Fund. Although the information shown in the bar chart and the table gives you some idea of the risks involved in investing in the Fund, the Fund's past performance (before and after taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at [www.invescopowershares.com](http://www.invescopowershares.com).

### Annual Total Returns—Calendar Years

### Best Quarter

1.83% (2nd Quarter 2015)

### Worst Quarter

(2.11)% (3rd Quarter 2014)

## Average Annual Total Returns for the Periods Ended December 31, 2015

After-tax returns in the table below are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns shown are not relevant to investors who hold Shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	1 Year	Since Inception (06/20/13)
Return Before Taxes	3.03%	1.87%
Return After Taxes on Distributions	1.05%	0.06%
Return After Taxes on Distributions and Sale of Fund Shares	1.71%	0.61%
DB Global Short Maturity High Yield Bond Index (reflects no deduction for fees, expenses or taxes)	2.37%	2.52%
The BofA Merrill Lynch 0-5 Year US High Yield Constrained Index (reflects no deduction for fees, expenses or taxes)	(4.77)%	0.61%

## Management of the Fund

**Investment Adviser.** Invesco PowerShares Capital Management LLC (the "Adviser").

**Portfolio Managers.** The following individuals are responsible jointly and primarily for the day-to-day management of the Fund's portfolio:

Name	Title with Adviser/Trust	Date Began Managing the Fund
Peter Hubbard	Vice President and Director of Portfolio Management of the Adviser and Vice President of the Trust	Since Inception
Jeffrey W. Kernagis	Vice President and Senior Portfolio Manager of the Adviser	Since Inception
Gary Jones	Vice President and Portfolio Manager of the Adviser	Since Inception
Philip Fang	Vice President and Portfolio Manager of the Adviser	Since Inception
Richard Ose	Vice President and Portfolio Manager of the Adviser	Since Inception

## Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only with authorized participants ("APs") and only in large blocks of 50,000 Shares (each block of Shares is called a "Creation Unit"), or multiples thereof ("Creation Unit Aggregations"), in exchange for the deposit or delivery of a basket of securities. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may be purchased and sold only on a national securities exchange through brokers. Shares are listed for trading on NYSE Arca, Inc. and because the Shares will trade at market

prices rather than NAV, Shares may trade at prices greater than NAV (at a premium), at NAV, or less than NAV (at a discount).

### **Tax Information**

The Fund's distributions will generally be taxable, typically as either ordinary income or long-term capital gain, unless you are invested through a tax-deferred arrangement, such as a 401(k) plan or an individual retirement account; in such cases, taxation will be deferred until assets are withdrawn from the plan. A sale of Shares may result in capital gain or loss.

# PowerShares International Corporate Bond Portfolio

## Summary Information

### Investment Objective

The PowerShares International Corporate Bond Portfolio (the "Fund") seeks investment results that generally correspond (before fees and expenses) to the price and yield of the S&P International Corporate Bond Index® (the "Underlying Index").

### Fund Fees and Expenses

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund ("Shares"). Investors may pay brokerage commissions on their purchases and sales of Shares, which are not reflected in the table or the example below.

#### Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.50%
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.50%

### Example

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds.

This example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. This example does not include the brokerage commissions that investors may pay to buy and sell Shares. Although your actual costs may be higher or lower, your costs, based on these assumptions, would be:

1 Year	3 Years	5 Years	10 Years
\$51	\$160	\$280	\$628

### Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 13% of the average value of its portfolio.

### Principal Investment Strategies

The Fund generally will invest at least 80% of its total assets in investment grade corporate bonds that comprise the Underlying Index. The Underlying Index measures the performance of investment grade corporate bonds issued in the following currencies of Group of Ten ("G10") countries, excluding the U.S. Dollar (USD): Australia Dollar (AUD), British Pound (GBP), Canadian Dollar (CAD), Euro (EUR), Japanese Yen (JPY), New Zealand Dollar (NZD), Norwegian Krone (NOK), Swedish Krona (SEK) and Swiss Franc (SFR). S&P Dow Jones Indices LLC (the "Index Provider") constructs the Underlying Index from investment grade corporate bonds denominated in the currencies noted above. The Fund does not purchase all of the securities in the Underlying Index; instead, the Fund utilizes a "sampling" methodology to seek to achieve its investment objective.

*Concentration Policy.* The Fund will concentrate its investments (i.e., invest 25% or more of the value of its total assets) in securities of issuers in any one industry or sector only to the extent that the Underlying Index reflects a concentration in that industry or sector. The Fund will not otherwise concentrate its investments in securities of issuers in any one industry or sector.

### **Principal Risks of Investing in the Fund**

The following summarizes the principal risks of the Fund.

#### **The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.**

*Fixed-Income Securities Risk.* Fixed-income securities are subject to interest rate risk and credit risk. Interest rate risk refers to fluctuations in the value of a fixed-income security resulting from changes in the general level of interest rates. When the general level of interest rates goes up, the prices of most fixed-income securities go down. When the general level of interest rates goes down, the prices of most fixed-income securities go up. Fixed-income securities with longer maturities typically are more sensitive to changes in interest rates, making them more volatile than securities with shorter maturities. Credit risk refers to the possibility that the issuer of a security will be unable and/or unwilling to make timely interest payments and/or repay the principal on its debt. Debt instruments are subject to varying degrees of credit risk, which may be reflected in credit ratings. There is a possibility that the credit rating of a fixed-income security may be downgraded after purchase, which may adversely affect the value of the security.

*Changing Fixed-Income Market Conditions.* The current historically low interest rate environment was created in part by the Federal Reserve Board ("FRB") and certain foreign central banks keeping the federal funds and equivalent foreign rates at or near zero. The "tapering" in 2015 of the FRB's quantitative easing program, combined with the FRB's recent raising of the target range for the Federal Funds Rate (and likely eventual increase in equivalent foreign rates) may expose fixed-income markets to heightened volatility and reduced liquidity for certain fixed-income investments, particularly those with longer maturities, although it is difficult to predict the impact of this rate increase and any future rate increases on various markets. In addition, decreases in fixed-income dealer market-making capacity may also potentially lead to heightened volatility and reduced liquidity in the fixed-income markets. As a result, the value of the Fund's investments and Share price may decline. Changes in central bank policies could also result in higher than normal shareholder redemptions, which could potentially increase portfolio turnover rate and the Fund's transaction costs.

*Global Bonds Risk.* Global bonds are subject to the same risks as other debt issues, notably credit risk, market risk, interest rate risk and liquidity risk. Investments in the securities of non-U.S. issuers involve risks beyond those associated with investments in U.S. securities, including greater market volatility, the availability of less reliable financial information, higher transactional costs, taxation by foreign governments, decreased market liquidity and political instability.

*Currency Risk.* The Fund invests in corporate bonds issued by non-U.S. companies and much of the income received by the Fund will be in foreign currencies. Because the Fund's net asset value ("NAV") is determined in U.S. dollars, the Fund's NAV could decline if the currency of the non-U.S. market in which the Fund invests depreciates against the U.S. dollar, even if the value of the Fund's holdings, measured in the foreign currency, increases.

*Call Risk.* If interest rates fall, it is possible that issuers of callable securities with high interest coupons will "call" (or prepay) their bonds before their maturity date. If an issuer exercised such a call during a period of declining interest rates, the Fund may have to replace such called security with a lower yielding security. If that were to happen, the Fund's net investment income could fall.

*Valuation Risk.* Financial information related to securities of non-U.S. issuers may be less reliable than information related to securities of U.S. issuers, which may make it difficult to obtain a current price for a non-U.S. security held by the Fund. In certain circumstances, market quotations may not be readily available for some Fund securities, and those securities may be fair valued. The value established for a security through fair valuation may be different from what would be produced if the security had been valued using market quotations. Fund securities that are valued using techniques other than market quotations, including "fair valued" securities, may be subject to greater fluctuation in their value from one day to the next than would be the case if market quotations were used. In addition, there is no assurance that the Fund could sell a portfolio security for the value established for it at any time, and it is possible that the Fund would incur a loss because a security is sold at a discount to its established value.

*Market Risk.* Securities in the Underlying Index are subject to market fluctuations. You should anticipate that the value of the Shares will decline, more or less, in correlation with any decline in value of the securities in the Underlying Index.

*Market Trading Risk.* The Fund faces numerous market trading risks, including the potential lack of an active market for the Shares, losses from trading in secondary markets, and disruption in the creation/redemption process of the Fund. Any of these factors may lead to the Shares trading at a premium or discount to the Fund's NAV.

*Sampling Risk.* The Fund's use of a representative sampling approach will result in it holding a smaller number of securities than are in the Underlying Index. As a result, an adverse development to an issuer of securities that the Fund holds could result in a greater decline in NAV than would be the case if the Fund held all of the securities in the Underlying Index. To the extent the assets in the Fund are smaller, these risks will be greater.

*Cash Transaction Risk.* Unlike most exchange-traded funds ("ETFs"), the Fund currently intends to effect creations and redemptions principally for cash, rather than principally in-kind, due to the nature of the Fund's investments. As such, an investment in Shares may be less tax efficient than an investment in shares of conventional ETFs, which utilize an entirely in-kind redemption process. Also, there may be a substantial difference in the after-tax rate of return between the Fund and conventional ETFs.

**Non-Correlation Risk.** The Fund's return may not match the return of the Underlying Index for a number of reasons. For example, the Fund incurs operating expenses not applicable to the Underlying Index, and incurs costs in buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Underlying Index. Because the Fund issues and redeems Creation Units (as defined below) principally for cash, it will incur higher costs in buying and selling securities than if it issued and redeemed Creation Units in-kind. Additionally, the Fund's use of a representative sampling approach may cause the Fund to not be as well correlated with the return of the Underlying Index as would be the case if the Fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. In addition, the performance of the Fund and the Underlying Index may vary due to asset valuation differences and differences between the Fund's portfolio and the Underlying Index resulting from legal restrictions, costs or liquidity constraints.

**Index Risk.** Unlike many investment companies, the Fund does not utilize an investing strategy that seeks returns in excess of its Underlying Index. Therefore, it would not necessarily buy or sell a security unless that security is added or removed, respectively, from the Underlying Index, even if that security generally is underperforming.

**Issuer-Specific Changes.** The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

## Performance

The bar chart below shows how the Fund has performed. The table below the bar chart shows the Fund's average annual total returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing how the Fund's total return has varied from year to year and how the Fund's average annual total returns compared with a broad measure of market performance an additional index with characteristics relevant to the Fund. Although the information shown in the bar chart and the table gives you some idea of the risks involved in investing in the Fund, the Fund's past performance (before and after taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at [www.invescopowershares.com](http://www.invescopowershares.com).

### Annual Total Returns—Calendar Years

### Best Quarter

7.61% (3rd Quarter 2012)

### Worst Quarter

(6.45)% (1st Quarter 2015)

## Average Annual Total Returns for the Periods Ended December 31, 2015

After-tax returns in the table below are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns shown are not relevant to investors who hold Shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	1 Year	5 Years	Since Inception (06/03/10)
Return Before Taxes	(9.40)%	1.66%	3.29%
Return After Taxes on Distributions	(9.55)%	0.75%	2.42%
Return After Taxes on Distributions and Sale of Fund Shares	(5.32)%	0.94%	2.22%
S&P International Corporate Bond Index® (Net) (reflects invested dividends net of withholding taxes, but reflects no deduction for fees, expenses or other taxes)	(9.59)%	1.36%	3.14%
Barclays Pan-European Aggregate Index (reflects no deduction for fees, expenses or taxes)	(8.24)%	1.76%	3.33%

## Management of the Fund

**Investment Adviser.** Invesco PowerShares Capital Management LLC (the "Adviser").

**Portfolio Managers.** The following individuals are responsible jointly and primarily for the day-to-day management of the Fund's portfolio:

Name	Title with Adviser/Trust	Date Began Managing the Fund
Peter Hubbard	Vice President and Director of Portfolio Management of the Adviser and Vice President of the Trust	Since Inception
Jeffrey W. Kernagis	Vice President and Senior Portfolio Manager of the Adviser	Since Inception
Gary Jones	Vice President and Portfolio Manager of the Adviser	January 2012
Philip Fang	Vice President and Portfolio Manager of the Adviser	Since Inception
Richard Ose	Vice President and Portfolio Manager of the Adviser	February 2014

## Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only with authorized participants ("APs") and only in large blocks of 50,000 Shares (each block of Shares is called a "Creation Unit"), or multiples thereof ("Creation Unit Aggregations"), in exchange for the deposit or delivery of cash. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may be purchased and sold only on a national securities exchange through brokers. Shares are listed for trading

on NYSE Arca, Inc. and because the Shares will trade at market prices rather than NAV, Shares may trade at prices greater than NAV (at a premium), at NAV, or less than NAV (at a discount).

**Tax Information**

The Fund's distributions will generally be taxable, typically as either ordinary income or long-term capital gain, unless you are invested through a tax-deferred arrangement, such as a 401(k) plan or an individual retirement account; in such cases, taxation will be deferred until assets are withdrawn from the plan. A sale of Shares may result in capital gain or loss.

# PowerShares LadderRite 0-5 Year Corporate Bond Portfolio

## Summary Information

### Investment Objective

The PowerShares LadderRite 0-5 Year Corporate Bond Portfolio (the "Fund") seeks investment results that generally correspond (before fees and expenses) to the price and yield of the NASDAQ LadderRite® 0-5 Year USD Corporate Bond Index (the "Underlying Index").

### Fund Fees and Expenses

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund ("Shares"). Investors may pay brokerage commissions on their purchases and sales of Shares, which are not reflected in the table or the example below.

#### Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.22%
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.22%

### Example

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds.

This example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. This example does not include the brokerage commissions that investors may pay to buy and sell Shares. Although your actual costs may be higher or lower, your costs, based on these assumptions, would be:

1 Year	3 Years	5 Years	10 Years
\$23	\$71	\$124	\$280

### Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. During the Fund's most recent fiscal year, the Fund's portfolio turnover rate was 9% of the average value of its portfolio, excluding the value of portfolio securities received or delivered as a result of the Fund's in-kind creations and redemptions.

### Principal Investment Strategies

The Fund generally will invest at least 80% of its total assets in U.S. and foreign investment grade corporate bonds that comprise the Underlying Index. The Underlying Index measures potential returns of a theoretical portfolio of fixed income securities with a yield curve based upon remaining effective terms to maturity of five years or less. Using a "laddered strategy," Nasdaq, Inc. (the "Index Provider") includes in the Underlying Index a portfolio of bonds with short- to intermediate-term maturities, meaning that it divides the

components of the Underlying Index into five equally weighted groups of bonds with staggered terms to maturity in an annual, sequential (“laddered”) structure from zero to five years.

Strictly in accordance with its guidelines and mandated procedures, the Index Provider selects such bonds issued by companies domiciled in the U.S. and other developed countries for inclusion in the Underlying Index that: (i) are denominated in U.S. dollars; (ii) pay fixed amounts of taxable interest; (iii) are rated as “investment grade” by at least one of Standard & Poor’s Ratings Group, a division of The McGraw-Hill Companies, Inc. (“S&P”), Moody’s Investors Service, Inc. (“Moody’s”) or Fitch Ratings Inc. (“Fitch”) (i.e., have a grade of BBB- or higher from Fitch or S&P or of Baa3 or higher from Moody’s); (iv) have an outstanding face value of at least \$500 million; and (v) have five years or less to maturity. Bonds must have an initial term to maturity of at least one year to be eligible for inclusion in the Underlying Index. As of the date of this Prospectus, the Underlying Index may include bonds from companies domiciled in the U.S., Canada, Japan, Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and the United Kingdom; however, this universe may change in accordance with the Underlying Index’s methodology.

The Fund does not purchase all of the securities in the Underlying Index; instead, the Fund utilizes a “sampling” methodology to seek to achieve its investment objective.

*Concentration Policy.* The Fund will concentrate its investments (i.e., invest more than 25% of the value of its net assets) in securities of issuers in any one industry or group of industries only to the extent that the Underlying Index reflects a concentration in that industry or group of industries. The Fund will not otherwise concentrate its investments in securities of issuers in any one industry or group of industries.

### **Principal Risks of Investing in the Fund**

The following summarizes the principal risks of the Fund.

#### **The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.**

*Fixed-Income Securities Risk.* Fixed-income securities are subject to interest rate risk and credit risk. Interest rate risk refers to fluctuations in the value of a fixed-income security resulting from changes in the general level of interest rates. When the general level of interest rates goes up, the prices of most fixed-income securities go down. When the general level of interest rates goes down, the prices of most fixed-income securities go up. Fixed-income securities with longer maturities typically are more sensitive to changes in interest rates, making them more volatile than securities with shorter maturities. Credit risk refers to the possibility that the issuer of a security will be unable and/or unwilling to make timely interest payments and/or repay the principal on its debt. Debt instruments are subject to varying degrees of credit risk, which may be reflected in credit ratings. There is a possibility that the credit rating of a fixed-income security may be downgraded after purchase, which may adversely affect the value of the security.

*Foreign Investment Risk.* Investments in the securities of non-U.S. issuers involve risks beyond those associated with investments in U.S. securities. Foreign securities may have relatively low market liquidity, greater market volatility, decreased publicly available information and less reliable financial information about issuers, and inconsistent and potentially less stringent accounting, auditing and financial reporting requirements and standards of practice comparable to those applicable to domestic issuers. Foreign securities also are subject to the risks of expropriation, nationalization, political instability or other adverse political or economic developments and the difficulty of enforcing obligations in other countries. Investments in foreign securities also may be subject to dividend withholding or confiscatory taxes, currency blockage and/or transfer restrictions and higher transactional costs.

*Changing Fixed-Income Market Conditions.* The current historically low interest rate environment was created in part by the Federal Reserve Board (“FRB”) and certain foreign central banks keeping the federal funds and equivalent foreign rates at or near zero. The “tapering” in 2015 of the FRB’s quantitative easing program, combined with the FRB’s recent raising of the target range for the Federal Funds Rate (and likely eventual increase in equivalent foreign rates) may expose fixed-income markets to heightened volatility and reduced liquidity for certain fixed-income investments, particularly those with longer maturities, although it is difficult to predict the impact of this rate increase and any future rate increases on various markets. In addition, decreases in fixed-income dealer market-making capacity may also potentially lead to heightened volatility and reduced liquidity in the fixed-income markets. As a result, the value of the Fund’s investments and Share price may decline. Changes in central bank policies could also result in higher than normal shareholder redemptions, which could potentially increase portfolio turnover rate and the Fund’s transaction costs.

*Short-Term and Intermediate-Term Bond Risk.* The Fund will invest in bonds with short or intermediate terms (i.e., five years or less) until maturity. The amount of time until a fixed income security matures can lead to various risks, including changes in interest rates over the life of a bond. Short-term and intermediate-term fixed income securities generally provide lower returns than longer-term fixed income securities. The average maturity of the Fund’s investments will affect the volatility of the Fund’s share price.

*Liquidity Risk.* Liquidity risk exists when a particular investment is difficult to purchase or sell. If the Fund invests in illiquid securities or portfolio securities become illiquid, it may reduce the returns of the Fund because the Fund may be unable to sell the illiquid securities at an advantageous time or price.

*Call Risk.* If interest rates fall, it is possible that issuers of callable securities with high interest coupons will “call” (or prepay) their bonds before their maturity date. If an issuer exercised such a call during a period of declining interest rates, the Fund may have to replace such called security with a lower yielding security. If that were to happen, the Fund’s net investment income could fall.

*Valuation Risk.* Financial information related to securities of non-U.S. issuers may be less reliable than information related to

securities of U.S. issuers, which may make it difficult to obtain a current price for a non-U.S. security held by the Fund. In certain circumstances, market quotations may not be readily available for some Fund securities, and those securities may be fair valued. The value established for a security through fair valuation may be different from what would be produced if the security had been valued using market quotations. Fund securities that are valued using techniques other than market quotations, including "fair valued" securities, may be subject to greater fluctuation in their value from one day to the next than would be the case if market quotations were used. In addition, there is no assurance that the Fund could sell a portfolio security for the value established for it at any time, and it is possible that the Fund would incur a loss because a security is sold at a discount to its established value.

**Valuation Time Risk.** The Fund may invest a portion of its assets in foreign bonds and, because foreign exchanges may be open on days when the Fund does not price its Shares, the value of the non-U.S. securities in the Fund's portfolio may change on days when you will not be able to purchase or sell your Shares. As a result, trading spreads and the resulting premium or discount on the Shares may widen, and, therefore, increase the difference between the market price of the Shares and the net asset value ("NAV") of such Shares.

**Market Risk.** Securities in the Underlying Index are subject to market fluctuations. You should anticipate that the value of the Shares will decline, more or less, to the same extent as any decline in value of the securities in the Underlying Index.

**Market Trading Risk.** The Fund faces numerous market trading risks, including the potential lack of an active market for the Shares, losses from trading in secondary markets, and disruption in the creation/redemption process of the Fund. Any of these factors may lead to the Shares trading at a premium or discount to the Fund's NAV.

**Geographic Concentration Risk.** The Fund may invest a significant portion of its total assets in securities of issuers from a specific country or geographic region. A natural or other disaster could occur in a country or geographic region in which the Fund invests, which could affect the economy or particular business operations of companies in that specific country or geographic region and adversely impact the Fund's investments in the affected country or region.

**Non-Correlation Risk.** The Fund's return may not exactly match the return of the Underlying Index for a number of reasons. For example, the Fund incurs operating expenses not applicable to the Underlying Index, and incurs costs in buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Underlying Index. Additionally, the Fund's use of a representative sampling approach may cause the Fund not to be as well-correlated with the return of the Underlying Index as would be the case if the Fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. In addition, the performance of the Fund and the Underlying Index may vary due to asset valuation differences and differences between the Fund's portfolio and the Underlying Index resulting from legal restrictions, costs or liquidity constraints.

**Sampling Risk.** The Fund's use of a representative sampling approach may result in it holding a smaller number of securities than are in the Underlying Index. As a result, an adverse development respecting an issuer of securities held by the Fund could result in a greater decline in NAV than would be the case if the Fund held all of the securities in the Underlying Index. To the extent the assets in the Fund are smaller, these risks will be greater.

**Index Risk.** Unlike many investment companies, the Fund does not utilize an investing strategy that seeks returns in excess of the Underlying Index. Therefore, the Fund would not necessarily buy or sell a security unless that security is added or removed, respectively, from its Underlying Index, even if that security generally is underperforming.

**Non-Diversified Fund Risk.** Because the Fund is non-diversified and can invest a greater portion of its assets in securities of individual issuers than a diversified fund, changes in the market value of a single investment could cause greater fluctuations in Share price than would occur in a diversified fund. This may increase the Fund's volatility and cause the performance of a relatively small number of issuers to have a greater impact on the Fund's performance.

**Issuer-Specific Changes.** The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

## Performance

The bar chart below shows how the Fund has performed. The table below the bar chart shows the Fund's average annual total returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing the Fund's total return in its first calendar year and by showing how the Fund's average annual total return compared with a broad measure of market performance and an additional index with characteristics relevant to the Fund. Although the information shown in the bar chart and the table gives you some idea of the risks involved in investing in the Fund, the Fund's past performance (before and after taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at [www.invescopowershares.com](http://www.invescopowershares.com).

**Annual Total Returns—Calendar Year**

**Best Quarter**

0.87% (1st Quarter 2015)

**Worst Quarter**

(0.33)% (4th Quarter 2015)

## Average Annual Total Returns for the Periods Ended December 31, 2015

After-tax returns in the table below are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns shown are not relevant to investors who hold Shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	1 Year	Since Inception (09/10/14)
Return Before Taxes	1.07%	0.98%
Return After Taxes on Distributions	0.41%	0.38%
Return After Taxes on Distributions and Sale of Fund Shares	0.61%	0.48%
NASDAQ LadderRite® 0-5 Year USD Corporate Bond Index (reflects no deduction for fees, expenses or taxes)	1.11%	1.06%
The BofA Merrill Lynch 0-5 Year US Corporate Index (reflects no deduction for fees, expenses or taxes)	1.19%	1.04%

## Management of the Fund

*Investment Adviser.* Invesco PowerShares Capital Management LLC (the "Adviser").

*Portfolio Managers.* The following individuals are responsible jointly and primarily for the day-to-day management of the Fund's portfolio:

Name	Title with Adviser/Trust	Date Began Managing the Fund
Peter Hubbard	Vice President and Director of Portfolio Management of the Adviser and Vice President of the Trust	Since Inception
Jeffrey W. Kernagis	Vice President and Senior Portfolio Manager of the Adviser	Since Inception
Gary Jones	Vice President and Portfolio Manager of the Adviser	Since Inception
Richard Ose	Vice President and Portfolio Manager of the Adviser	Since Inception
Philip Fang	Vice President and Portfolio Manager of the Adviser	Since Inception

## Purchase and Sale of Shares

The Fund will issue and redeem Shares at NAV only with authorized participants ("APs") and only in large blocks of 50,000 Shares (each block of Shares is called a "Creation Unit"), or multiples thereof ("Creation Unit Aggregations"), in exchange for the deposit or delivery of a basket of securities. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may be purchased and sold only on a national securities exchange through brokers. Shares will be listed for trading on The NASDAQ Stock Market LLC and because the Shares will trade at market prices rather than NAV, Shares may trade at prices greater than NAV (at a premium), at NAV, or less than NAV (at a discount).

## Tax Information

The Fund's distributions will generally be taxable, typically as either ordinary income or long-term capital gain, unless you are invested through a tax-deferred arrangement, such as a 401(k) plan or an individual retirement account; in such cases, taxation will be deferred until assets are withdrawn from the plan. A sale of Shares may result in capital gain or loss.

# PowerShares National AMT-Free Municipal Bond Portfolio

## Summary Information

### Investment Objective

The PowerShares National AMT-Free Municipal Bond Portfolio (the "Fund") seeks investment results that generally correspond (before fees and expenses) to the price and yield of The BofA Merrill Lynch National Long-Term Core Plus Municipal Securities Index (the "Underlying Index").

### Fund Fees and Expenses

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund ("Shares"). Investors may pay brokerage commissions on their purchases and sales of Shares, which are not reflected in the table or the example below.

#### Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.28%
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.28%

### Example

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. This example does not include the brokerage commissions that investors may pay to buy and sell Shares. Although your actual costs may be higher or lower, your costs, based on these assumptions, would be:

1 Year	3 Years	5 Years	10 Years
\$29	\$90	\$157	\$356

### Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 4% of the average value of its portfolio.

### Principal Investment Strategies

The Fund generally will invest at least 80% of its total assets in municipal securities that comprise the Underlying Index and that also are exempt from the federal alternative minimum tax ("AMT"). The Underlying Index is composed of U.S. dollar-denominated, investment grade, tax-exempt debt publicly issued by U.S. states and territories or their political subdivisions, in the U.S. domestic market with a term of at least 15 years remaining to final maturity. The Fund does not purchase all of the securities in the Underlying Index; instead, the Fund utilizes a "sampling" methodology to seek to achieve its investment objective.

*Concentration Policy.* The Fund will concentrate its investments (i.e., invest 25% or more of the value of its total assets) in securities of issuers in any one industry or sector only to the extent that the Underlying Index reflects a concentration in that industry or sector. The Fund will not otherwise concentrate its investments in securities of issuers in any one industry or sector.

### **Principal Risks of Investing in the Fund**

The following summarizes the principal risks of the Fund.

#### **The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.**

*Fixed-Income Securities Risk.* Fixed-income securities are subject to interest rate risk and credit risk. Interest rate risk refers to fluctuations in the value of a fixed-income security resulting from changes in the general level of interest rates. When the general level of interest rates goes up, the prices of most fixed-income securities go down. When the general level of interest rates goes down, the prices of most fixed-income securities go up. Fixed-income securities with longer maturities typically are more sensitive to changes in interest rates, making them more volatile than securities with shorter maturities. Credit risk refers to the possibility that the issuer of a security will be unable and/or unwilling to make timely interest payments and/or repay the principal on its debt. Debt instruments are subject to varying degrees of credit risk, which may be reflected in credit ratings. There is a possibility that the credit rating of a fixed-income security may be downgraded after purchase, which may adversely affect the value of the security.

*Changing Fixed-Income Market Conditions.* The current historically low interest rate environment was created in part by the Federal Reserve Board ("FRB") and certain foreign central banks keeping the federal funds and equivalent foreign rates at or near zero. The "tapering" in 2015 of the FRB's quantitative easing program, combined with the FRB's recent raising of the target range for the Federal Funds Rate (and likely eventual increase in equivalent foreign rates) may expose fixed-income markets to heightened volatility and reduced liquidity for certain fixed-income investments, particularly those with longer maturities, although it is difficult to predict the impact of this rate increase and any future rate increases on various markets. In addition, decreases in fixed-income dealer market-making capacity may also potentially lead to heightened volatility and reduced liquidity in the fixed-income markets. As a result, the value of the Fund's investments and Share price may decline. Changes in central bank policies could also result in higher than normal shareholder redemptions, which could potentially increase portfolio turnover rate and the Fund's transaction costs.

*Municipal Securities Risk.* Litigation, legislation or other political events, local business or economic conditions or the bankruptcy of the issuer could have a significant effect on the ability of an issuer of municipal securities to make payments of principal and/or interest. Political changes and uncertainties in the municipal market related to taxation, legislative changes or the rights of municipal security holders can significantly affect municipal securities. Because many securities are issued to finance similar proj-

ects, especially those relating to education, health care, transportation and utilities, conditions in those sectors can affect the overall municipal market. In addition, changes in the financial condition of an individual municipal issuer can affect the overall municipal market. If the Internal Revenue Service ("IRS") determines that an issuer of a municipal security has not complied with applicable tax requirements, interest from the security could become taxable and the security could decline significantly in value.

*Puerto Rican Municipal Securities Risk.* Adverse market, political, economic or other conditions or developments within Puerto Rico may negatively affect the value of the Fund's holdings in Puerto Rican municipal obligations. The Puerto Rican economy is reliant on manufacturing, services and tourism and its economy and financial operations parallel the economic cycles of the United States. Current economic difficulties in the United States are likely to have an adverse impact on the overall economy of Puerto Rico. Moreover, like many other U.S. states and municipalities, Puerto Rico experienced a significant downturn during the recent recession. Puerto Rico continues to face significant fiscal challenges, including persistent government deficits, underfunded public pension benefit obligations, underfunded government retirement systems, sizable debt service obligations and a high unemployment rate. Many ratings organizations previously downgraded a number of securities issued in Puerto Rico or placed them on "negative watch." If the economic situation in Puerto Rico persists or worsens, the volatility, credit quality and performance of the Fund could be adversely affected.

*Municipal Insurance Risk.* A portion of the municipal securities that the Fund holds may be covered by insurance that guarantees the bond's scheduled payment of interest and repayment of principal. Municipal security insurance does not insure against market fluctuations or fluctuations in the Fund's Share price. In addition, a municipal security insurance policy will not cover: (i) repayment of a municipal security before maturity (redemption), (ii) prepayment or payment of an acceleration premium (except for a mandatory sinking fund redemption) or any other provision of a bond indenture that advances the maturity of the bond, or (iii) nonpayment of principal or interest caused by negligence or bankruptcy of the paying agent. A mandatory sinking fund redemption may be a provision of a municipal security issue whereby part of the municipal security issue may be retired before maturity.

*Call Risk.* If interest rates fall, it is possible that issuers of callable securities with high interest coupons will "call" (or prepay) their bonds before their maturity date. If an issuer exercised such a call during a period of declining interest rates, the Fund may have to replace such called security with a lower yielding security. If that were to happen, the Fund's net investment income could fall.

*Tax Risk.* There is no guarantee that the Fund's income will be exempt from federal or state income taxes. Events occurring after the date of issuance of a municipal bond or after the Fund's acquisition of a municipal bond may result in a determination that interest on that bond is includible in gross income for federal income tax purposes retroactively to its date of issuance. Such a determination may cause a portion of prior distributions by the

Fund to its shareholders to be taxable to those shareholders in the year of receipt. Federal or state changes in income or alternative minimum tax rates or in the tax treatment of municipal bonds may make municipal bonds less attractive as investments and cause them to lose value.

**Market Risk.** Securities in the Underlying Index are subject to market fluctuations. You should anticipate that the value of the Shares will decline, more or less, in correlation with any decline in value of the securities in the Underlying Index.

**Market Trading Risk.** The Fund faces numerous market trading risks, including the potential lack of an active market for the Shares, losses from trading in secondary markets, and disruption in the creation/redemption process of the Fund. Any of these factors may lead to the Shares trading at a premium or discount to the Fund's net asset value ("NAV").

**Sampling Risk.** The Fund's use of a representative sampling approach will result in it holding a smaller number of securities than are in the Underlying Index. As a result, an adverse development to an issuer of securities that the Fund holds could result in a greater decline in NAV than would be the case if the Fund held all of the securities in the Underlying Index. To the extent the assets in the Fund are smaller, these risks will be greater.

**Cash Transaction Risk.** Unlike most exchange-traded funds ("ETFs"), the Fund currently intends to effect creations and redemptions principally for cash, rather than principally in-kind, due to the nature of the Fund's investments. As such, an investment in Shares may be less tax efficient than an investment in shares of conventional ETFs, which utilize an entirely in-kind redemption process. Also, there may be a substantial difference in the after-tax rate of return between the Fund and conventional ETFs.

**Non-Correlation Risk.** The Fund's return may not match the return of the Underlying Index for a number of reasons. For example, the Fund incurs operating expenses not applicable to the Underlying Index, and incurs costs in buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Underlying Index. Because the Fund issues and redeems Creation Units (as defined below) principally for cash, it will incur higher costs in buying and selling securities than if it issued and redeemed Creation Units in-kind. Additionally, the Fund's use of a representative sampling approach may cause the Fund to not be as well correlated with the return of the Underlying Index as would be the case if the Fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. In addition, the performance of the Fund and the Underlying Index may vary due to asset valuation differences and differences between the Fund's portfolio and the Underlying Index resulting from legal restrictions, costs or liquidity constraints.

**Index Risk.** Unlike many investment companies, the Fund does not utilize an investing strategy that seeks returns in excess of its Underlying Index. Therefore, it would not necessarily buy or sell a security unless that security is added or removed, respectively, from the Underlying Index, even if that security generally is underperforming.

**Issuer-Specific Changes.** The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

## Performance

The bar chart below shows how the Fund has performed. The table below the bar chart shows the Fund's average annual total returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing how the Fund's total return has varied from year to year and by showing how the Fund's average annual total returns compared with a broad measure of market performance and an additional index with characteristics relevant to the Fund. Although the information shown in the bar chart and the table gives you some idea of the risks involved in investing in the Fund, the Fund's past performance (before and after taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at [www.invescopowershares.com](http://www.invescopowershares.com).

### Annual Total Returns—Calendar Years

#### Best Quarter

10.32% (3rd Quarter 2009)

#### Worst Quarter

(7.76)% (3rd Quarter 2008)

### Average Annual Total Returns for the Periods Ended December 31, 2015

After-tax returns in the table below are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns shown are not relevant to investors who hold Shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	1 Year	5 Years	Since Inception (10/11/07)
Return Before Taxes	4.03%	6.65%	4.70%
Return After Taxes on Distributions	4.03%	6.65%	4.70%

Blended—The BofA Merrill Lynch National Insured Long-Term Core Plus Municipal Securities Index<sup>(2)</sup>  
(reflects no deduction for fees, expenses or taxes)

4.47%      7.20%      5.35%

- (1) Effective July 8, 2014, the Fund's underlying index changed to The BofA Merrill Lynch National Long-Term Core Plus Municipal Securities Index. "5 Years" and "Since Inception" information for the new underlying index is not available because the index did not commence until March 4, 2013.
- (2) The data shown as "Blended" is composed of the returns through December 31, 2015 of the Fund's current underlying index, as well as two prior underlying indices tracked by the Fund. The Fund tracked The BofA Merrill Lynch National Insured Long-Term Core Municipal Securities Index from its inception until the conversion date of that index, May 29, 2009, and then tracked The BofA Merrill Lynch National Insured Long-Term Core Plus Municipal Securities Index starting at the conversion date and through July 8, 2014.

## Management of the Fund

**Investment Adviser.** Invesco PowerShares Capital Management LLC (the "Adviser").

**Portfolio Managers.** The following individuals are responsible jointly and primarily for the day-to-day management of the Fund's portfolio:

Name	Title with Adviser/Trust	Date Began Managing the Fund
Peter Hubbard	Vice President and Director of Portfolio Management of the Adviser and Vice President of the Trust	Since Inception
Jeffrey W. Kernagis	Vice President and Senior Portfolio Manager of the Adviser	Since Inception
Gary Jones	Vice President and Portfolio Manager of the Adviser	January 2012
Philip Fang	Vice President and Portfolio Manager of the Adviser	Since Inception
Richard Ose	Vice President and Portfolio Manager of the Adviser	February 2014

## Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only with authorized participants ("APs") and only in large blocks of 50,000 Shares (each block of Shares is called a "Creation Unit"), or multiples thereof ("Creation Unit Aggregations"), in exchange for the deposit or delivery of cash. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may be purchased and sold only on a national securities exchange through brokers. Shares are listed for trading on NYSE Arca, Inc. and because the Shares will trade at market prices rather than NAV, Shares may trade at prices greater than NAV (at a premium), at NAV, or less than NAV (at a discount).

## Tax Information

Dividends paid by the Fund that are properly reported as "exempt-interest dividends" will not be subject to federal income tax. The Fund intends to invest its assets in a manner such that at least 80% of its dividend distributions to shareholders will generally be attributable to interest that is exempt from federal income tax and will not be a tax preference item for purposes of the AMT. Such dividends, however, may be included in a corporate shareholder's "adjusted current earnings" for AMT purposes.

The Fund's distributions, other than from net tax-exempt income, will generally be taxable, typically as either ordinary income or long-term capital gain, unless you are invested through a tax-deferred arrangement, such as a 401(k) plan or an individual retirement account; in such cases, taxation will be deferred until assets are withdrawn from the plan. A sale of Shares may result in a taxable capital gain or loss.

# PowerShares New York AMT-Free Municipal Bond Portfolio

## Summary Information

### Investment Objective

The PowerShares New York AMT-Free Municipal Bond Portfolio (the "Fund") seeks investment results that generally correspond (before fees and expenses) to the price and yield of The BofA Merrill Lynch New York Long-Term Core Plus Municipal Securities Index (the "Underlying Index").

### Fund Fees and Expenses

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund ("Shares"). Investors may pay brokerage commissions on their purchases and sales of Shares, which are not reflected in the table or the example below.

#### Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.28%
Other Expenses	0.00%
Total Annual Fund Operating Expenses <sup>(1)</sup>	0.28%

### Example

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. This example does not include the brokerage commissions that investors may pay to buy and sell Shares. Although your actual costs may be higher or lower, your costs, based on these assumptions, would be:

1 Year	3 Years	5 Years	10 Years
\$29	\$90	\$157	\$356

### Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 18% of the average value of its portfolio.

### Principal Investment Strategies

The Fund generally will invest at least 80% of its total assets in municipal securities that comprise the Underlying Index and that also are exempt from the federal alternative minimum tax ("AMT"). The Underlying Index is composed of U.S. dollar-denominated, investment grade, tax-exempt debt publicly issued by New York or any U.S. territory or their political subdivisions, in the U.S. domestic market with a term of at least 15 years remaining to final maturity. The Fund does not purchase all of the securities in the Underlying Index; instead, the Fund utilizes a "sampling" methodology to seek to achieve its investment objective.

*Concentration Policy.* The Fund will concentrate its investments (i.e., invest 25% or more of the value of its total assets) in securities of issuers in any one industry or sector only to the extent that the Underlying Index reflects a concentration in that industry or sector. The Fund will not otherwise concentrate its investments in securities of issuers in any one industry or sector.

### **Principal Risks of Investing in the Fund**

The following summarizes the principal risks of the Fund.

#### **The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.**

*Fixed-Income Securities Risk.* Fixed-income securities are subject to interest rate risk and credit risk. Interest rate risk refers to fluctuations in the value of a fixed-income security resulting from changes in the general level of interest rates. When the general level of interest rates goes up, the prices of most fixed-income securities go down. When the general level of interest rates goes down, the prices of most fixed-income securities go up. Fixed-income securities with longer maturities typically are more sensitive to changes in interest rates, making them more volatile than securities with shorter maturities. Credit risk refers to the possibility that the issuer of a security will be unable and/or unwilling to make timely interest payments and/or repay the principal on its debt. Debt instruments are subject to varying degrees of credit risk, which may be reflected in credit ratings. There is a possibility that the credit rating of a fixed-income security may be downgraded after purchase, which may adversely affect the value of the security.

*Changing Fixed-Income Market Conditions.* The current historically low interest rate environment was created in part by the Federal Reserve Board ("FRB") and certain foreign central banks keeping the federal funds and equivalent foreign rates at or near zero. The "tapering" in 2015 of the FRB's quantitative easing program, combined with the FRB's recent raising of the target range for the Federal Funds Rate (and likely eventual increase in equivalent foreign rates) may expose fixed-income markets to heightened volatility and reduced liquidity for certain fixed-income investments, particularly those with longer maturities, although it is difficult to predict the impact of this rate increase and any future rate increases on various markets. In addition, decreases in fixed-income dealer market-making capacity may also potentially lead to heightened volatility and reduced liquidity in the fixed-income markets. As a result, the value of the Fund's investments and Share price may decline. Changes in central bank policies could also result in higher than normal shareholder redemptions, which could potentially increase portfolio turnover rate and the Fund's transaction costs.

*Municipal Securities Risk.* Litigation, legislation or other political events, local business or economic conditions or the bankruptcy of the issuer could have a significant effect on the ability of an issuer of municipal securities to make payments of principal and/or interest. Political changes and uncertainties in the municipal market related to taxation, legislative changes or the rights of municipal security holders can significantly affect municipal securities. Because many securities are issued to finance similar projects,

especially those relating to education, health care, transportation and utilities, conditions in those sectors can affect the overall municipal market. In addition, changes in the financial condition of an individual municipal issuer can affect the overall municipal market. If the Internal Revenue Service ("IRS") determines that an issuer of a municipal security has not complied with applicable tax requirements, interest from the security could become taxable and the security could decline significantly in value.

*New York Municipal Securities Risk.* Because the Fund invests a substantial portion of its assets in New York municipal securities, the Fund will have greater exposure to negative political, economic, regulatory or other factors within the State of New York, including the financial condition of its public authorities and political subdivisions, than certain funds that invest in a broader base of securities. Unfavorable developments in any economic sector may have a substantial impact on the overall New York municipal market. Certain issuers of New York municipal bonds have experienced serious financial difficulties in the past and reoccurrence of these difficulties may impair the ability of certain New York issuers to pay principal or interest on their obligations.

*Puerto Rican Municipal Securities Risk.* Adverse market, political, economic or other conditions or developments within Puerto Rico may negatively affect the value of the Fund's holdings in Puerto Rican municipal obligations. The Puerto Rican economy is reliant on manufacturing, services and tourism and its economy and financial operations parallel the economic cycles of the United States. Current economic difficulties in the United States are likely to have an adverse impact on the overall economy of Puerto Rico. Moreover, like many other U.S. states and municipalities, Puerto Rico experienced a significant downturn during the recent recession. Puerto Rico continues to face significant fiscal challenges, including persistent government deficits, underfunded public pension benefit obligations, underfunded government retirement systems, sizable debt service obligations and a high unemployment rate. Many ratings organizations previously downgraded a number of securities issued in Puerto Rico or placed them on "negative watch." If the economic situation in Puerto Rico persists or worsens, the volatility, credit quality and performance of the Fund could be adversely affected.

*Municipal Insurance Risk.* A portion of the municipal securities that the Fund holds may be covered by insurance that guarantees the bond's scheduled payment of interest and repayment of principal. Municipal security insurance does not insure against market fluctuations or fluctuations in the Fund's Share price. In addition, a municipal security insurance policy will not cover: (i) repayment of a municipal security before maturity (redemption), (ii) prepayment or payment of an acceleration premium (except for a mandatory sinking fund redemption) or any other provision of a bond indenture that advances the maturity of the bond, or (iii) nonpayment of principal or interest caused by negligence or bankruptcy of the paying agent. A mandatory sinking fund redemption may be a provision of a municipal security issue whereby part of the municipal security issue may be retired before maturity.

*State-Specific and U.S. Territories' Concentration Risk.* The Fund will be less diversified geographically than a fund investing across

many states and therefore has greater exposure to adverse economic and political changes in New York and Puerto Rico.

**Call Risk.** If interest rates fall, it is possible that issuers of callable securities with high interest coupons will “call” (or prepay) their bonds before their maturity date. If an issuer exercised such a call during a period of declining interest rates, the Fund may have to replace such called security with a lower yielding security. If that were to happen, the Fund’s net investment income could fall.

**Tax Risk.** There is no guarantee that the Fund’s income will be exempt from federal or state income taxes. Events occurring after the date of issuance of a municipal bond or after the Fund’s acquisition of a municipal bond may result in a determination that interest on that bond is includible in gross income for federal income tax purposes retroactively to its date of issuance. Such a determination may cause a portion of prior distributions by the Fund to its shareholders to be taxable to those shareholders in the year of receipt. Federal or state changes in income or alternative minimum tax rates or in the tax treatment of municipal bonds may make municipal bonds less attractive as investments and cause them to lose value.

**Market Risk.** Securities in the Underlying Index are subject to market fluctuations. You should anticipate that the value of the Shares will decline, more or less, in correlation with any decline in value of the securities in the Underlying Index.

**Market Trading Risk.** The Fund faces numerous market trading risks, including the potential lack of an active market for the Shares, losses from trading in secondary markets, and disruption in the creation/redemption process of the Fund. Any of these factors may lead to the Shares trading at a premium or discount to the Fund’s net asset value (“NAV”).

**Sampling Risk.** The Fund’s use of a representative sampling approach will result in it holding a smaller number of securities than are in the Underlying Index. As a result, an adverse development to an issuer of securities that the Fund holds could result in a greater decline in NAV than would be the case if the Fund held all of the securities in the Underlying Index. To the extent the assets in the Fund are smaller, these risks will be greater.

**Cash Transaction Risk.** Unlike most exchange-traded funds (“ETFs”), the Fund currently intends to effect creations and redemptions principally for cash, rather than principally in-kind, due to the nature of the Fund’s investments. As such, an investment in Shares may be less tax efficient than an investment in shares of conventional ETFs, which utilize an entirely in-kind redemption process. Also, there may be a substantial difference in the after-tax rate of return between the Fund and conventional ETFs.

**Non-Correlation Risk.** The Fund’s return may not match the return of the Underlying Index for a number of reasons. For example, the Fund incurs operating expenses not applicable to the Underlying Index, and incurs costs in buying and selling securities, especially when rebalancing the Fund’s securities holdings to reflect changes in the composition of the Underlying Index. Because the Fund issues and redeems Creation Units (as defined below) principally for cash, it will incur higher costs in buying and selling securities

than if it issued and redeemed Creation Units in-kind. Additionally, the Fund’s use of a representative sampling approach may cause the Fund to not be as well correlated with the return of the Underlying Index as would be the case if the Fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. In addition, the performance of the Fund and the Underlying Index may vary due to asset valuation differences and differences between the Fund’s portfolio and the Underlying Index resulting from legal restrictions, costs or liquidity constraints.

**Index Risk.** Unlike many investment companies, the Fund does not utilize an investing strategy that seeks returns in excess of its Underlying Index. Therefore, it would not necessarily buy or sell a security unless that security is added or removed, respectively, from the Underlying Index, even if that security generally is underperforming.

**Non-Diversified Fund Risk.** Because the Fund is non-diversified and can invest a greater portion of its assets in securities of individual issuers than a diversified fund, changes in the market value of a single investment could cause greater fluctuations in Share price than would occur in a diversified fund. This may increase the Fund’s volatility and cause the performance of a relatively small number of issuers to have a greater impact on the Fund’s performance.

**Issuer-Specific Changes.** The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

## Performance

The bar chart below shows how the Fund has performed. The table below the bar chart shows the Fund’s average annual total returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing how the Fund’s total return has varied from year to year and by showing how the Fund’s average annual total returns compared with a broad measure of market performance and an additional index with characteristics relevant to the Fund. Although the information shown in the bar chart and the table gives you some idea of the risks involved in investing in the Fund, the Fund’s past performance (before and after taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at [www.invescopowershares.com](http://www.invescopowershares.com).

**Annual Total Returns—Calendar Years**

**Best Quarter**

8.94% (3rd Quarter 2009)

**Worst Quarter**

(7.91)% (3rd Quarter 2008)

## Average Annual Total Returns for the Periods Ended December 31, 2015

After-tax returns in the table below are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns shown are not relevant to investors who hold Shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	1 Year	5 Years	Since Inception (10/11/07)
Return Before Taxes	3.82%	6.03%	4.10%
Return After Taxes on Distributions	3.82%	6.01%	4.08%
Return After Taxes on Distributions and Sale of Fund Shares	3.65%	5.59%	4.07%
The BofA Merrill Lynch New York Long-Term Core Plus Municipal Securities Index (reflects no deduction for fees, expenses or taxes) <sup>(1)</sup>	4.52%	N/A	N/A
Barclays Municipal Bond 20 Year Index (reflects no deduction for fees, expenses or taxes)	3.93%	7.08%	5.69%
Blended—The BofA Merrill Lynch New York Long-Term Core Plus Municipal Securities Index <sup>(2)</sup> (reflects no deduction for fees, expenses or taxes)	4.52%	6.59%	4.92%

- (1) Effective July 8, 2014, the Fund's underlying index changed to The BofA Merrill Lynch New York Long-Term Core Plus Municipal Securities Index. "5 Years" and "Since Inception" information for the new underlying index is not available because the index did not commence until February 12, 2013.
- (2) The data shown as "Blended" is composed of the returns through December 31, 2015 of the Fund's current underlying index, as well as two prior underlying indices tracked by the Fund. The Fund tracked The BofA Merrill Lynch New York Insured Long-Term Core Municipal Securities Index from its inception until the conversion date of that index, May 29, 2009, and then tracked The BofA Merrill Lynch New York Insured Long-Term Core Plus Municipal Securities Index starting at the conversion date and through July 8, 2014.

### Management of the Fund

**Investment Adviser.** Invesco PowerShares Capital Management LLC (the "Adviser").

**Portfolio Managers.** The following individuals are responsible jointly and primarily for the day-to-day management of the Fund's portfolio:

Name	Title with Adviser/Trust	Date Began Managing the Fund
Peter Hubbard	Vice President and Director of Portfolio Management of the Adviser and Vice President of the Trust	Since Inception
Jeffrey W. Kernagis	Vice President and Senior Portfolio Manager of the Adviser	Since Inception
Gary Jones	Vice President and Portfolio Manager of the Adviser	January 2012
Philip Fang	Vice President and Portfolio Manager of the Adviser	Since Inception
Richard Ose	Vice President and Portfolio Manager of the Adviser	February 2014

### Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only with authorized participants ("APs") and only in large blocks of 50,000 Shares (each block of Shares is called a "Creation Unit"), or multiples thereof ("Creation Unit Aggregations"), in exchange for the deposit or delivery of cash. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may be purchased and sold only on a national securities exchange through brokers. Shares are listed for trading on NYSE Arca, Inc. and because the Shares will trade at market prices rather than NAV, Shares may trade at prices greater than NAV (at a premium), at NAV, or less than NAV (at a discount).

### Tax Information

Dividends paid by the Fund that are properly reported as "exempt-interest dividends" will not be subject to federal income tax. The Fund intends to invest its assets in a manner such that at least 80% of its dividend distributions to shareholders will generally be attributable to interest that is exempt from federal income tax and will not be a tax preference item for purposes of the AMT. Such dividends, however, may be included in a corporate shareholder's "adjusted current earnings" for AMT purposes.

The Fund's distributions, other than from net tax-exempt income, will generally be taxable, typically as either ordinary income or long-term capital gain, unless you are invested through a tax-deferred arrangement, such as a 401(k) plan or an individual retirement account; in such cases, taxation will be deferred until assets are withdrawn from the plan. A sale of Shares may result in a taxable capital gain or loss.

## Summary Information

### Investment Objective

The PowerShares Preferred Portfolio (the "Fund") seeks investment results that generally correspond to the price and yield (before fees and expenses) of The BofA Merrill Lynch Core Plus Fixed Rate Preferred Securities Index (the "Underlying Index").

### Fund Fees and Expenses

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund ("Shares"). Investors may pay brokerage commissions on their purchases and sales of Shares, which are not reflected in the table or example below.

#### Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.50%
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.50%

### Example

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. This example does not include the brokerage commissions that investors may pay to buy and sell Shares. Although your actual costs may be higher or lower, your costs, based on these assumptions, would be:

1 Year	3 Years	5 Years	10 Years
\$51	\$160	\$280	\$628

### Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 12% of the average value of its portfolio, excluding the value of portfolio securities received or delivered as a result of the Fund's in-kind creations and redemptions.

### Principal Investment Strategies

The Fund generally will invest at least 80% of its total assets in fixed rate U.S. dollar-denominated preferred securities that comprise the Underlying Index. The Underlying Index is a market capitalization-weighted index designed to reflect the total return performance of the fixed rate U.S. dollar-denominated preferred securities market. The Underlying Index includes both traditional and other preferred securities, including preferred securities issued by foreign companies in the form of American depositary receipts ("ADRs"), as well as senior and subordinate debt securities. Unlisted preferred securities are excluded from the Underlying Index, but unlisted senior or subordinated debt-like securities are eligible for inclusion. The Underlying Index may include Rule 144A securities. However, as of the date of this Prospectus, Rule 144A securities represent less than 1%

of the Underlying Index. Strictly in accordance with its guidelines and mandated procedures, Merrill Lynch, Pierce, Fenner & Smith Incorporated (“BofA Merrill Lynch” or the “Index Provider”) selects securities for the Underlying Index using a rules-based methodology. Qualifying securities must be rated at least B3 (based on an average of Moody’s Investors Services, Inc. (“Moody’s”), Standard & Poor’s, a division of McGraw-Hill Companies, Inc. (“S&P”) and Fitch Ratings, Inc. (“Fitch”)) and must have an investment grade country risk profile (based on an average of Moody’s, S&P and Fitch foreign currency long-term sovereign debt ratings). The Fund does not purchase all of the securities in the Underlying Index; instead, the Fund utilizes a “sampling” methodology to seek to achieve its investment objective.

*Concentration Policy.* The Fund will concentrate its investments (i.e., invest 25% or more of the value of its total assets) in securities of issuers in any one industry or sector only to the extent that the Underlying Index reflects a concentration in that industry or sector. The Fund will not otherwise concentrate its investments in securities of issuers in any one industry or sector.

### Principal Risks of Investing in the Fund

The following summarizes the principal risks of the Fund.

#### **The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.**

*Fixed-Income Securities Risk.* Fixed-income securities are subject to interest rate risk and credit risk. Interest rate risk refers to fluctuations in the value of a fixed-income security resulting from changes in the general level of interest rates. When the general level of interest rates goes up, the prices of most fixed-income securities go down. When the general level of interest rates goes down, the prices of most fixed-income securities go up. Fixed-income securities with longer maturities typically are more sensitive to changes in interest rates, making them more volatile than securities with shorter maturities. Credit risk refers to the possibility that the issuer of a security will be unable and/or unwilling to make timely interest payments and/or repay the principal on its debt. Debt instruments are subject to varying degrees of credit risk, which may be reflected in credit ratings. There is a possibility that the credit rating of a fixed-income security may be downgraded after purchase, which may adversely affect the value of the security.

*Changing Fixed-Income Market Conditions.* The current historically low interest rate environment was created in part by the Federal Reserve Board (“FRB”) and certain foreign central banks keeping the federal funds and equivalent foreign rates at or near zero. The “tapering” in 2015 of the FRB’s quantitative easing program, combined with the FRB’s recent raising of the target range for the Federal Funds Rate (and likely eventual increase in equivalent foreign rates) may expose fixed-income markets to heightened volatility and reduced liquidity for certain fixed-income investments, particularly those with longer maturities, although it is difficult to predict the impact of this rate increase and any future rate increases on various markets. In addition, decreases in fixed-income dealer market-making capacity may also potentially lead to heightened volatility and reduced liquidity in the fixed-income

markets. As a result, the value of the Fund’s investments and Share price may decline. Changes in central bank policies could also result in higher than normal shareholder redemptions, which could potentially increase portfolio turnover rate and the Fund’s transaction costs.

*Non-Investment Grade Securities Risk.* Non-investment grade securities and unrated securities of comparable credit quality are subject to the increased risk of an issuer’s inability to meet principal and interest payment obligations. These securities may be subject to greater price volatility due to such factors as specific corporate developments, interest rate sensitivity, negative perceptions of the non-investment grade securities markets generally, real or perceived adverse economic and competitive industry conditions and less secondary market liquidity. If the issuer of non-investment grade securities defaults, the Fund may incur additional expenses to seek recovery.

*Preferred Securities Risk.* There are special risks associated with investing in preferred securities. Preferred securities may include provisions that permit the issuer, in its discretion, to defer or omit distributions for a certain period of time. If the Fund owns a security that is deferring or omitting its distributions, the Fund may be required to report the distribution on its tax returns, even though it may not have received this income. Further, preferred securities may lose substantial value due to the omission or deferment of dividend payments.

*Financial Institutions Risk.* Investments in financial institutions may be subject to certain risks, including, but not limited to, the risk of regulatory actions, changes in interest rates and concentration of loan portfolios in an industry or sector. Financial institutions are highly regulated and may suffer setbacks should regulatory rules and interpretations under which they operate change. Likewise, there is a high level of competition among financial institutions, which could adversely affect the viability of an institution.

*Foreign Investment Risk.* The Fund’s investments in non-U.S. issuers, although limited to ADRs, may involve unique risks compared to investing in securities of U.S. issuers, including, among others, greater market volatility, the availability of less reliable financial information, higher transactional costs, taxation by foreign governments, decreased market liquidity and political instability. Foreign issuers often are subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are U.S. securities, and, therefore, not all material information regarding these issuers will be available. Securities exchanges or foreign governments may adopt rules or regulations that may negatively impact the Fund’s ability to invest in foreign securities or may prevent the Fund from repatriating its investments.

*Call Risk.* If interest rates fall, it is possible that issuers of callable securities with high interest coupons will “call” (or prepay) their bonds before their maturity date. If an issuer exercised such a call during a period of declining interest rates, the Fund may have to replace such called security with a lower yielding security. If that were to happen, the Fund’s net investment income could fall.

**Small- and Mid-Capitalization Company Risk.** Investing in securities of small- and mid-capitalization companies involves greater risk than customarily is associated with investing in larger, more established companies. These companies' securities may be more volatile and less liquid than those of more established companies. These securities may have returns that vary, sometimes significantly, from the overall securities market. Often small- and mid-capitalization companies and the industries in which they focus are still evolving and, as a result, they may be more sensitive to changing market conditions.

**Market Risk.** Securities in the Underlying Index are subject to market fluctuations. You should anticipate that the value of the Shares will decline, more or less, in correlation with any decline in value of the securities in the Underlying Index.

**Market Trading Risk.** The Fund faces numerous market trading risks, including the potential lack of an active market for the Shares, losses from trading in secondary markets, and disruption in the creation/redemption process of the Fund. Any of these factors may lead to the Shares trading at a premium or discount to the Fund's net asset value ("NAV").

**Sampling Risk.** The Fund's use of a representative sampling approach will result in it holding a smaller number of securities than are in the Underlying Index. As a result, an adverse development to an issuer of securities that the Fund holds could result in a greater decline in NAV than would be the case if the Fund held all of the securities in the Underlying Index. To the extent the assets in the Fund are smaller, these risks will be greater.

**Non-Correlation Risk.** The Fund's return may not match the return of the Underlying Index for a number of reasons. For example, the Fund incurs operating expenses not applicable to the Underlying Index, and incurs costs in buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Underlying Index. The Fund's use of a representative sampling approach may cause the Fund not to be as well-correlated with the return of the Underlying Index as would be the case if the Fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. In addition, the performance of the Fund and the Underlying Index may vary due to asset valuation differences and differences between the Fund's portfolio and the Underlying Index resulting from legal restrictions, costs or liquidity constraints.

**Index Risk.** Unlike many investment companies, the Fund does not utilize an investing strategy that seeks returns in excess of its Underlying Index. Therefore, it would not necessarily buy or sell a security unless that security is added or removed, respectively, from the Underlying Index, even if that security generally is underperforming.

**Non-Diversified Fund Risk.** Because the Fund is non-diversified and can invest a greater portion of its assets in securities of individual issuers than a diversified fund, changes in the market value of a single investment could cause greater fluctuations in Share price than would occur in a diversified fund. This may increase the Fund's volatility and cause the performance of a relatively small number of issuers to have a greater impact on the Fund's performance.

**Issuer-Specific Changes.** The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

## Performance

The bar chart below shows how the Fund has performed. The table below the bar chart shows the Fund's average annual total returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing how the Fund's total return has varied from year to year and by showing how the Fund's average annual total returns compared with a broad measure of market performance and an additional index with characteristics relevant to the Fund. Although the information shown in the bar chart and the table gives you some idea of the risks involved in investing in the Fund, the Fund's past performance (before and after taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at [www.invescopowershares.com](http://www.invescopowershares.com).

### Annual Total Returns—Calendar Years

#### Best Quarter

30.66% (2nd Quarter 2009)

#### Worst Quarter

(20.82)% (1st Quarter 2009)

### Average Annual Total Returns for the Periods Ended December 31, 2015

After-tax returns in the table below are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns shown are not relevant to investors who hold Shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	1 Year	5 Years	Since Inception (01/31/08)
Return Before Taxes	8.08%	7.66%	3.26%
Return After Taxes on Distributions	6.20%	5.82%	1.37%
Return After Taxes on Distributions and Sale of Fund Shares	5.37%	5.57%	1.99%
The BofA Merrill Lynch Core Plus Fixed Rate Preferred Securities Index <sup>(1)</sup> (reflects no deduction for fees, expenses or taxes)	8.53%	N/A	N/A
S&P U.S. Preferred Stock Index (reflects no deduction for fees, expenses or taxes)	5.47%	7.09%	5.85%
Blended—The BofA Merrill Lynch Core Plus Fixed Rate Preferred Securities Index <sup>(2)</sup> (reflects no deduction for fees, expenses or taxes)	8.53%	8.12%	4.06%

- (1) Effective July 8, 2014, the Fund's underlying index changed to The BofA Merrill Lynch Core Plus Fixed Rate Preferred Securities Securities Index. "5 Years" and "Since Inception" information for the new underlying index is not available because the index did not commence until February 12, 2013.
- (2) The data shown as "Blended" is composed of the original underlying index (The BofA Merrill Lynch Core Fixed Rate Preferred Securities Index) from Fund inception until the conversion date, April 2, 2012, followed by the performance of the new underlying index (The BofA Merrill Lynch Core Plus Fixed Rate Preferred Securities Index) starting at the index conversion date and through December 31, 2015.

## Management of the Fund

**Investment Adviser.** Invesco PowerShares Capital Management LLC (the "Adviser").

**Portfolio Managers.** The following individuals are responsible jointly and primarily for the day-to-day management of the Fund's portfolio:

Name	Title with Adviser/Trust	Date Began Managing the Fund
Peter Hubbard	Vice President and Director of Portfolio Management of the Adviser and Vice President of the Trust	Since Inception
Jeffrey W. Kernagis	Vice President and Senior Portfolio Manager of the Adviser	Since Inception
Gary Jones	Vice President and Portfolio Manager of the Adviser	January 2012
Philip Fang	Vice President and Portfolio Manager of the Adviser	Since Inception
Richard Ose	Vice President and Portfolio Manager of the Adviser	February 2014

## Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only with authorized participants ("APs") and only in large blocks of 50,000 Shares (each block of Shares is called a "Creation Unit"), or multiples thereof ("Creation Unit Aggregations"), in exchange for the deposit or delivery of a basket of securities. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may be purchased and sold only on a national securities exchange through brokers. Shares are listed for trading on NYSE Arca, Inc. and because the Shares will trade at market prices rather than NAV, Shares may trade at prices greater than NAV (at a premium), at NAV, or less than NAV (at a discount).

## Tax Information

The Fund's distributions will generally be taxable, typically as either ordinary income or long-term capital gain, unless you are invested through a tax-deferred arrangement, such as a 401(k) plan or an individual retirement account; in such cases, taxation will be deferred until assets are withdrawn from the plan. A sale of Shares may result in capital gain or loss.

# PowerShares Senior Loan Portfolio

## Summary Information

### Investment Objective

The PowerShares Senior Loan Portfolio (the "Fund") seeks investment results that generally correspond (before fees and expenses) to the price and yield of the S&P/LSTA U.S. Leveraged Loan 100 Index (the "Underlying Index").

### Fund Fees and Expenses

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund ("Shares"). Investors may pay brokerage commissions on their purchases and sales of Shares, which are not reflected in the table or the example below.

#### Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.65%
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.65%

### Example

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. This example does not include brokerage commissions that investors may pay to buy and sell Shares. Although your actual costs may be higher or lower, your costs, based on these assumptions, would be:

1 Year	3 Years	5 Years	10 Years
\$66	\$208	\$362	\$810

### Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 43%.

### Principal Investment Strategies

The Fund generally will invest at least 80% of its net assets (plus any borrowings for investment purposes) in senior loans that comprise the Underlying Index. Invesco PowerShares Capital Management LLC (the "Adviser") and the Fund's sub-adviser, Invesco Senior Secured Management, Inc. (the "Sub-Adviser"), define senior loans to include loans referred to as leveraged loans, bank loans and/or floating rate loans. Banks and other lending institutions generally issue senior loans to corporations, partnerships or other entities ("borrowers"). These borrowers operate in a variety of industries and geographic regions, including foreign countries.

Senior loans often are issued in connection with recapitalizations, acquisitions, leveraged buyouts and re-financings. Senior loans typically are structured and administered by a financial institution that acts as agent for the lenders in the lending group. The Fund

generally will purchase loans from banks or other financial institutions through assignments or participations. The Fund may acquire a direct interest in a loan from the agent or another lender by assignment or an indirect interest in a loan as a participation in another lender's portion of a loan. The Fund generally will sell loans it holds by way of an assignment, but may sell participation interests in such loans at any time to facilitate its ability to fund redemption requests.

S&P Dow Jones Indices LLC (the "Index Provider") compiles, maintains and calculates the Underlying Index, which tracks the market-weighted performance of the largest institutional leveraged loans based on market weightings, spreads and interest payments. A leveraged loan is rated below investment grade quality or is unrated but deemed to be of comparable quality. The Fund will invest in loans that are expected to be below investment grade quality and to bear interest at a floating rate that periodically resets. The Underlying Index may include, and the Fund may acquire and retain, loans of borrowers that have filed for bankruptcy protection. The Fund does not purchase all of the securities in the Underlying Index; instead, the Fund utilizes a "sampling" methodology to seek to achieve its investment objective.

*Concentration Policy.* The Fund will concentrate its investments (i.e., invest 25% or more of the value of its total assets) in securities of issuers in any one industry or sector only to the extent that the Underlying Index reflects a concentration in that industry or sector. The Fund will not otherwise concentrate its investments in securities of issuers in any one industry or sector.

### **Principal Risks of Investing in the Fund**

The following summarizes the principal risks of the Fund.

#### **The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.**

*Fixed-Income Securities Risk.* Fixed-income securities are subject to interest rate risk and credit risk. Interest rate risk refers to fluctuations in the value of a fixed-income security resulting from changes in the general level of interest rates. When the general level of interest rates goes up, the prices of most fixed-income securities go down. When the general level of interest rates goes down, the prices of most fixed-income securities go up. Fixed-income securities with longer maturities typically are more sensitive to changes in interest rates, making them more volatile than securities with shorter maturities. Credit risk refers to the possibility that the issuer of a security will be unable and/or unwilling to make timely interest payments and/or repay the principal on its debt. Debt instruments are subject to varying degrees of credit risk, which may be reflected in credit ratings. There is a possibility that the credit rating of a fixed-income security may be downgraded after purchase, which may adversely affect the value of the security.

*Changing Fixed-Income Market Conditions.* The current historically low interest rate environment was created in part by the Federal Reserve Board ("FRB") and certain foreign central banks keeping the federal funds and equivalent foreign rates at or near zero. The "tapering" in 2015 of the FRB's quantitative easing program,

combined with the FRB's recent raising of the target range for the Federal Funds Rate (and likely eventual increase in equivalent foreign rates) may expose fixed-income markets to heightened volatility and reduced liquidity for certain fixed-income investments, particularly those with longer maturities, although it is difficult to predict the impact of this rate increase and any future rate increases on various markets. In addition, decreases in fixed-income dealer market-making capacity may also potentially lead to heightened volatility and reduced liquidity in the fixed-income markets. As a result, the value of the Fund's investments and Share price may decline. Changes in central bank policies could also result in higher than normal shareholder redemptions, which could potentially increase portfolio turnover rate and the Fund's transaction costs.

*Risk of Investing in Loans.* Investments in loans are subject to interest rate risk and credit risk. Interest rate risk refers to fluctuations in the value of a loan resulting from changes in the general level of interest rates. Credit risk refers to the possibility that the borrower of a loan will be unable and/or unwilling to make timely interest payments and/or repay the principal on its obligation. Default in the payment of interest or principal on a loan will result in a reduction in the value of the loan and consequently a reduction in the value of the Fund's investments and a potential decrease in the net asset value ("NAV") of the Fund. Although the loans in which the Fund will invest generally will be secured by specific collateral, there can be no assurance that such collateral would satisfy the borrower's obligation in the event of non-payment of scheduled interest or principal or that such collateral could be readily liquidated. In the event of the bankruptcy of a borrower, the Fund's access to the collateral may be limited by bankruptcy or other insolvency laws and, therefore, the Fund could experience delays or limitations with respect to its ability to realize the benefits of the collateral securing a loan.

There is no organized exchange on which loans are traded and reliable market quotations may not be readily available. Therefore, elements of judgment may play a greater role in valuation of loans than for securities with a more developed secondary market and the Fund may not realize full value in the event of the need to sell a loan. To the extent that a secondary market does exist for certain loans, the market may be subject to volatility, irregular trading activity, wide bid/ask spreads, decreased liquidity and extended trade settlement periods. Some loans are subject to the risk that a court, pursuant to fraudulent conveyance or other similar laws, could subordinate the loans to presently existing or future indebtedness of the borrower or take other action detrimental to lenders, including the Fund, such as invalidation of loans or causing interest previously paid to be refunded to the borrower. Investments in loans also are subject to the risk of changes in legislation or state or federal regulations. If such legislation or regulations impose additional requirements or restrictions on the ability of financial institutions to make loans, the availability of loans for investment by the Fund may be adversely affected. Many loans are not registered with the Securities and Exchange Commission (the "SEC") or any state securities commission and often are not rated by any nationally recognized rating service. Generally, there is less readily available, reliable information about most loans than is the case for many other types of securities. Although a loan may be senior to equity and other debt securities

in a borrower's capital structure, such obligations may be structurally subordinated to obligations of the borrower's subsidiaries.

*Senior Loans Risk.* The risks associated with senior loans are similar to the risks of junk bonds, although senior loans typically are senior and secured, whereas junk bonds often are subordinated and unsecured. Investments in senior loans typically are below investment grade and are considered speculative because of the credit risk of their issuers. Such companies are more likely to default on their payments of interest and principal owed, and such defaults could reduce the Fund's NAV and income distributions. An economic downturn generally leads to a higher non-payment rate, and a senior loan may lose significant value before a default occurs. There is no assurance that the liquidation of the collateral would satisfy the claims of the borrower's obligations in the event of the non-payment of scheduled interest or principal, or that the collateral could be readily liquidated. Economic and other events (whether real or perceived) can reduce the demand for certain senior loans or senior loans generally, which may reduce market prices. Senior loans and other debt securities also are subject to the risk of price declines and to increases in prevailing interest rates, although floating-rate debt instruments such as senior loans in which the Fund may be expected to invest are substantially less exposed to this risk than fixed-rate debt instruments. No active trading market may exist for certain senior loans, which may impair the ability of the Fund to realize full value in the event of the need to liquidate such assets. Adverse market conditions may impair the liquidity of some actively traded senior loans. Longer interest rate reset periods generally increase fluctuations in value as a result of changes in market interest rates.

*Risks of Loan Assignments and Participations.* As the purchaser of an assignment, the Fund typically succeeds to all the rights and obligations of the assigning institution and becomes a lender under the credit agreement with respect to the debt obligation; however, the Fund may not be able to unilaterally enforce all rights and remedies under the loan and with regard to any associated collateral. Because assignments may be arranged through private negotiations between potential assignees and potential assignors, the rights and obligations acquired by the Fund as the purchaser of an assignment may differ from, and be more limited than, those held by the assigning lender. In addition, if the loan is foreclosed, the Fund could become part owner of any collateral and could bear the costs and liabilities of owning and disposing of the collateral. The Fund may be required to pass along to a purchaser that buys a loan from the Fund by way of assignment, a portion of any fees to which the Fund is entitled under the loan. In connection with purchasing participations, the Fund generally will have no right to enforce compliance by the borrower with the terms of the loan agreement relating to the loan, nor any rights of set-off against the borrower, and the Fund may not directly benefit from any collateral supporting the loan in which it has purchased the participation. As a result, the Fund will be subject to the credit risk of both the borrower and the lender that is selling the participation. In the event of the insolvency of the lender selling a participation, the Fund may be treated as a general creditor of the lender and may not benefit from any set-off between the lender and the borrower.

*Non-Investment Grade Securities Risk.* All or a significant portion of the loans in which the Fund will invest may be determined to be non-investment grade loans that are considered speculative. The Fund also may invest in junk bonds. Non-investment grade loans and bonds, and unrated loans and bonds of comparable credit quality are subject to the increased risk of a borrower's or issuer's inability to meet principal and interest payment obligations. These securities may be subject to greater price volatility due to such factors as specific corporate developments, interest rate sensitivity, negative perceptions of the non-investment grade securities markets generally, real or perceived adverse economic and competitive industry conditions and less secondary market liquidity. If the borrower of lower-rated loans or issuer of lower-rated bonds defaults, the Fund may incur additional expenses to seek recovery.

*Prepayment Risk.* The ability of the borrower of a loan to repay principal prior to maturity can limit the potential for gains by the Fund. During periods of declining interest rates, the borrower of a loan may exercise its option to prepay principal earlier than scheduled, forcing the Underlying Index, and therefore the Fund, to replace such a loan with a lower yielding loan. If interest rates are falling, the Fund may have to reinvest the unanticipated proceeds at lower interest rates, resulting in a decline in the Fund's income.

*Reinvestment Risk.* Proceeds from a current investment of the Fund, both interest payments and principal payments, may be reinvested in instruments that offer lower yields than the current investment due in part to market conditions and the interest rate environment at the time of reinvestment. Reinvestment risk is greater on short- to intermediate-term loans.

*Liquidity Risk.* A majority of the Fund's assets are likely to be invested in loans that are less liquid than securities traded on national exchanges. Loans with reduced liquidity involve greater risk than securities with more liquid markets. Available market quotations for such loans may vary over time, and if the credit quality of a loan unexpectedly declines, secondary trading of that loan may decline for a period of time. In the event that the Fund voluntarily or involuntarily liquidates portfolio assets during periods of infrequent trading, it may not receive full value for those assets.

*Risk of Investing in Loans to Non-U.S. Borrowers.* The Fund may invest all or a portion of its assets in loans of non-U.S. borrowers. The Fund's investments in loans of non-U.S. borrowers may be affected by political and social instability; changes in economic or taxation policies; difficulties when enforcing obligations; decreased liquidity; and increased volatility. Foreign borrowers may be subject to less regulation resulting in less publicly available information about the borrowers.

*Market Risk.* Securities in the Underlying Index are subject to market fluctuations. You should anticipate that the value of the Shares will decline, more or less, in correlation with any decline in value of the securities in the Underlying Index.

*Market Trading Risk.* The Fund faces numerous market trading risks, including the potential lack of an active market for the Shares, losses from trading in secondary markets, and disruption in the creation/redemption process of the Fund. Any of these factors may lead to the Shares trading at a premium or discount to the Fund's NAV.

**Sampling Risk.** The Fund's use of a representative sampling approach will result in its holding a smaller number of loans than are in the Underlying Index. As a result, an adverse development respecting a borrower of a loan held by the Fund could result in a greater decline in NAV than would be the case if the Fund held all of the loans in the Underlying Index. To the extent the assets in the Fund are smaller, these risks will be greater.

**Cash Transaction Risk.** Unlike most exchange-traded funds ("ETFs"), the Fund currently intends to effect creations and redemptions principally for cash, rather than principally in-kind, due to the nature of the Fund's investments. As such, an investment in Shares may be less tax efficient than an investment in shares of conventional ETFs, which utilize an entirely in-kind redemption process. Also, there may be a substantial difference in the after-tax rate of return between the Fund and conventional ETFs.

**Industry Concentration Risk.** The Underlying Index from time to time may be concentrated to a significant degree in securities of issuers located in a single industry or a sector. To the extent that the Underlying Index concentrates in the securities of issuers in a particular industry or sector, the Fund will also concentrate its investments to approximately the same extent. By concentrating its investments in an industry or sector, the Fund faces more risks than if it were diversified broadly over numerous industries or sectors. Such industry-based risks, any of which may adversely affect the companies in which the Fund invests, may include, but are not limited to, the following: general economic conditions or cyclical market patterns that could negatively affect supply and demand in a particular industry; competition for resources, adverse labor relations, political or world events; obsolescence of technologies; and increased competition or new product introductions that may affect the profitability or viability of companies in an industry. In addition, at times, such industry or sector may be out of favor and underperform other industries or the market as a whole.

**Non-Correlation Risk.** The Fund's return may not match the return of the Underlying Index for a number of reasons. For example, the Fund incurs operating expenses not applicable to the Underlying Index, and incurs costs in buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Underlying Index. Because the Fund issues and redeems Creation Units (as defined below) principally for cash, it will incur higher costs in buying and selling securities than if it issued and redeemed Creation Units in-kind. Additionally, the Fund's use of a representative sampling approach may cause the Fund to not be as well correlated with the return of the Underlying Index as would be the case if the Fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. In addition, the performance of the Fund and the Underlying Index may vary due to asset valuation differences and differences between the Fund's portfolio and the Underlying Index resulting from legal restrictions, costs or liquidity constraints.

**Index Risk.** Unlike many investment companies, the Fund does not utilize an investing strategy that seeks returns in excess of its Underlying Index. Therefore, it would not necessarily buy or sell a

security unless that security is added or removed, respectively, from the Underlying Index, even if that security generally is underperforming.

**Issuer-Specific Changes.** The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

**When Issued and Delayed Delivery Transactions.** The Fund may also purchase and sell interests in senior loans and other portfolio securities on a when issued and delayed delivery basis. No income accrues to the Fund on such interests or securities in connection with such purchase transactions prior to the date that the Fund actually takes delivery of such interests or securities. These transactions are subject to market fluctuation; the value of the interests in senior loans and other portfolio debt securities at delivery may be more or less than their purchase price, and yields generally available on such interests or securities when delivery occurs may be higher or lower than yields on the interests or securities obtained pursuant to such transactions. Because the Fund relies on the buyer or seller, as the case may be, to consummate the transaction, failure by the other party to complete the transaction may result in the Fund missing the opportunity of obtaining a price or yield considered to be advantageous. When the Fund is the buyer in such a transaction, however, it will maintain, in a segregated account with its custodian, cash, liquid securities or liquid senior loans having an aggregate value at least equal to the amount of such purchase commitments until payment is made. The Fund will make commitments to purchase such interests or securities on such basis only with the intention of actually acquiring these interests or securities, but the Fund may sell such interests or securities prior to the settlement date if such sale is considered to be advisable. To the extent the Fund engages in when issued and delayed delivery transactions, it will do so for the purpose of acquiring interests or securities for the Fund's portfolio consistent with the Fund's investment objective and policies and not for the purpose of investment leverage. No specific limitation exists as to the percentage of the Fund's assets which may be used to acquire securities on a when issued or delayed delivery basis.

## **Performance**

The bar chart below shows how the Fund has performed. The table below the bar chart shows the Fund's average annual total returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing how the Fund's total return has varied from year to year and by showing how the Fund's average annual total returns compared with a broad measure of market performance and an additional index with characteristics relevant to the Fund. Although the information shown in the bar chart and the table gives you some idea of the risks involved in investing in the Fund, the Fund's past performance (before and after taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at [www.invescopowershares.com](http://www.invescopowershares.com).

## Annual Total Returns—Calendar Years

### Best Quarter

4.29% (1st Quarter 2012)

### Worst Quarter

(2.30)% (3rd Quarter 2015)

## Average Annual Total Returns for the Periods Ended December 31, 2015

After-tax returns in the table below are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns shown are not relevant to investors who hold Shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	1 Year	Since Inception (03/03/11)
Return Before Taxes	(2.86)%	2.10%
Return After Taxes on Distributions	(4.48)%	0.38%
Return After Taxes on Distributions and Sale of Fund Shares	(1.59)%	0.91%
S&P/LSTA U.S. Leveraged Loan 100 Index (reflects no deduction for fees, expenses or taxes)	(2.75)%	2.36%
Barclays U.S. Aggregate Index (reflects no deduction for fees, expenses or taxes)	0.55%	3.42%

## Management of the Fund

**Investment Adviser.** Invesco PowerShares Capital Management LLC (the "Adviser").

**Investment Sub-Adviser.** Invesco Senior Secured Management, Inc. (the "Sub-Adviser").

**Portfolio Managers.** The following individuals are responsible jointly and primarily for the day-to-day management of the Fund's portfolio:

Name	Title with Sub-Adviser/Adviser/Trust	Date Began Managing the Fund
Scott Baskind	Head of Global Senior Loans and Chief Investment Officer of the Sub-Adviser	Since Inception
Seth Misshula	Head Trader and Portfolio Manager of the Sub-Adviser	February 2014
Peter Hubbard	Vice President and Director of Portfolio Management of the Adviser and Vice President of the Trust	Since Inception
Jeffrey W. Kernagis	Vice President and Senior Portfolio Manager of the Adviser	Since Inception
Gary Jones	Vice President and Portfolio Manager of the Adviser	January 2012
Philip Fang	Vice President and Portfolio Manager of the Adviser	Since Inception
Richard Ose	Vice President and Portfolio Manager of the Adviser	February 2014

## Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only with authorized participants ("APs") and only in large blocks of 100,000 Shares (each block of Shares is called a "Creation Unit"), or multiples thereof ("Creation Unit Aggregations") in exchange for the deposit or delivery of cash. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may be purchased and sold only on a national securities exchange through brokers. Shares are listed for trading on NYSE Arca, Inc. and because the Shares will trade at market prices rather than NAV, Shares may trade at prices greater than NAV (at a premium), at NAV, or less than NAV (at a discount).

## Tax Information

The Fund's distributions will generally be taxable, typically as either ordinary income or long-term capital gain, unless you are invested through a tax-deferred arrangement, such as a 401(k) plan or an individual retirement account; in such cases, taxation will be deferred until assets are withdrawn from the plan. A sale of Shares may result in capital gain or loss.

# PowerShares Variable Rate Preferred Portfolio

## Summary Information

### Investment Objective

The PowerShares Variable Rate Preferred Portfolio (the "Fund") seeks investment results that generally correspond (before fees and expenses) to the price and yield of the Wells Fargo® Hybrid and Preferred Securities Floating and Variable Rate Index (the "Underlying Index").

### Fund Fees and Expenses

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund ("Shares"). Investors may pay brokerage commissions on their purchases and sales of Shares, which are not reflected in the table or the example below.

#### Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.50%
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.50%

### Example

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds.

This example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. This example does not include the brokerage commissions that investors may pay to buy and sell Shares. Although your actual costs may be higher or lower, your costs, based on these assumptions, would be:

1 Year	3 Years	5 Years	10 Years
\$51	\$160	\$280	\$628

### Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 5% of the average value of its portfolio, excluding the value of portfolio securities received or delivered as a result of the Fund's in-kind creations and redemptions.

### Principal Investment Strategies

The Fund generally will invest at least 90% of its total assets in the securities that comprise the Underlying Index. The Underlying Index is a market capitalization-weighted index designed to track the performance of preferred stock, as well as certain types of "hybrid securities" that are functionally equivalent to preferred stocks, that are issued by U.S.-based or foreign issuers and that pay a floating or variable rate dividend or coupon. Strictly in accordance with its guidelines and mandated procedures, Wells Fargo Securities, LLC (together with Wells Fargo & Company, the "Index Provider") employs a proprietary methodology to select for the Underlying Index issues of preferred stock and "hybrid securities" that, in the Index Provider's judgment, are functionally equivalent to preferred

stock, including certain convertible securities, depositary preferred stock, trust preferred securities, perpetual subordinated debt listed on the New York Stock Exchange (the "NYSE"), NYSE Arca or NASDAQ and other types of hybrid securities that receive preferred treatment within an issuer's capital structure similar to that of traditional preferred stock. To be eligible for inclusion in the Underlying Index, the preferred stock or hybrid security must: (i) maintain a minimum par value of \$100 million outstanding or a minimum of 10 million shares outstanding; (ii) have floating or variable dividends or coupons; and (iii) be U.S. dollar denominated and U.S. registered (or otherwise exempt from registration in the United States). The Fund considers the traditional preferred stocks and functionally equivalent hybrid securities included in the Underlying Index, collectively, to be "Preferred Securities."

In general, preferred stock is a class of equity security that is so named because it is "preferred" over common stock within an issuer's capital structure. This preference means that an issuer must pay distributions on its preferred stock before paying dividends on its common stock, and that claims of preferred stockholders to an issuer's assets are placed ahead of claims of common stockholders when an issuer liquidates. However, as an equity security, preferred stock is junior to an issuer's various forms of debt.

Hybrid securities that are "functionally equivalent" to preferred stock are those securities that, like traditional preferred stock, have preference over the common stock within an issuer's capital structure, and are issued and traded in a similar manner to traditional preferred stock. Like preferred stock (but unlike debt securities or common stock), hybrid securities have the ability to defer dividend payments to stockholders and to extend their maturity dates to different durations.

Variable- or floating-rate securities pay interest at rates that adjust whenever a specified benchmark interest rate (e.g., the LIBOR or a T-Bill rate) changes, float at a fixed margin above a generally recognized base lending rate, or are reset or re-determined on specified dates (such as the last day of a month or calendar quarter). Dividends may be paid on a variable rate percentage of the fixed par value at which the preferred stock is issued, and preferred stocks often have a liquidation value that equals the original purchase price of the stock at the time of issuance.

The Fund does not purchase all of the Preferred Securities in the Underlying Index; instead, the Fund utilizes a "sampling" methodology to seek to achieve its investment objective.

*Concentration Policy.* The Fund will concentrate its investments (i.e., invest 25% or more of the value of its total assets) in securities of issuers in any one industry or sector only to the extent that the Underlying Index reflects a concentration in that industry or sector. The Fund will not otherwise concentrate its investments in securities of issuers in any one industry or sector.

### **Principal Risks of Investing in the Fund**

The following summarizes the principal risks of the Fund.

**The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.**

*Preferred Stock Risk.* Preferred stock is subject to issuer-specific and overall market risks that are generally applicable to equity securities as a whole; however, there are special risks associated with investing in preferred stock. Preferred stock may be less liquid than many other types of securities, such as common stock, and generally provides no voting rights with respect to the issuer. Preferred stock also faces greater risks of non-payment, as it may be subordinated to bonds or other debt instruments in an issuer's capital structure, meaning that an issuer's preferred stock generally pays dividends only after the issuer makes required payments to holders of its bonds and other debt. Because of the subordinated position of preferred stock in an issuer's capital structure, its quality and value depends heavily on an issuer's profitability and cash flows rather than on any legal claims to specific assets. Also, in certain circumstances, an issuer of a preferred stock may call or redeem it prior to a specified date or may convert it to common stock, all of which may negatively impact its return.

*Convertible Securities Risk.* A convertible security generally is a preferred stock that may be converted within a specified period of time into common stock. Convertible securities nevertheless remain subject to the risks of both debt and equity securities. As with other equity securities, the value of a convertible security tends to decrease as the price of the underlying stock goes down. However, like a debt security, a convertible security provides a fixed income stream and also tends to decrease in value when interest rates rise. Moreover, many convertible securities are subject to the same risks as lower-rated debt securities.

*Hybrid Securities Risk.* Although generally considered an equity security within an issuer's capital structure, a hybrid security may exhibit characteristics akin to a debt security or other evidence of indebtedness on which the value of the interest, or principal of which, is determined by reference to changes in the value of a reference instrument or financial strength of a reference entity (e.g., a security or other financial instrument, asset, currency or interest rate). The price of a hybrid security and any applicable reference instrument may not move in the same direction or at the same time. An investment in a hybrid security may entail significant risks not associated with a similar investment in a traditional equity security. The risks of a particular hybrid security will depend upon the terms of the instrument, but may include the possibility of significant changes in the value of any applicable reference instrument. Hybrid securities potentially are more volatile than traditional equity securities. Hybrid instruments may carry credit risk of their issuer, as well as liquidity risk, since they often are "customized" to meet the needs of an issuer or a particular investor, and therefore the number of investors that buy such instruments in the secondary market may be small.

*Interest Rate and Call Risk.* Although a Preferred Security represents an equity interest in a company, a Preferred Security has economic characteristics similar to those of debt securities, and therefore also is subject to many of the risks associated with debt securities, including interest rate risk and call risk. Interest rate risk refers to fluctuations in the value of a Preferred Security resulting from changes in the general level of interest rates. When the general level of interest rates goes up, the prices of Preferred Securities may go down, causing the Fund's assets to decline. The

current historically low interest rate environment increases the risk associated with rising interest rates. Additionally, if interest rates fall, it is possible that issuers of callable Preferred Securities will “call” (or prepay) that security before its maturity date. If a call were exercised by an issuer during or following a period of declining interest rates, the Fund likely will be forced to replace that called Preferred Security with a lower yielding security.

*Liquidity Risk.* Variable- and floating-rate Preferred Securities may be subject to liquidity risk, which occurs when a particular investment is difficult to purchase or sell. If the Fund invests in illiquid securities or current portfolio securities become illiquid, it may reduce the returns of the Fund because the Fund may be unable to sell the illiquid securities at an advantageous time or price.

*Risk of Subordinated Debt.* Perpetual subordinated debt is a type of hybrid instrument that has no maturity date for the return of principal and does not need to be redeemed by the issuer. These investments typically have lower credit ratings and lower priority than other obligations of an issuer during bankruptcy, presenting a greater risk for nonpayment. This risk increases as the priority of the obligation becomes lower. Payments on these securities may be subordinated to all existing and future liabilities and obligations of subsidiaries and associated companies of an issuer. Additionally, some perpetual subordinated debt does not restrict the ability of an issuer’s subsidiaries to incur further unsecured indebtedness.

*Foreign Investment Risk.* The Fund’s investments in Preferred Securities of non-U.S. issuers may involve unique risks compared to its investments in U.S. issuers, including, among others, greater market volatility, the availability of less reliable financial information, higher transactional costs, taxation by foreign governments, decreased market liquidity and political instability. Foreign issuers often are subject to less stringent requirements regarding accounting, auditing, financial reporting and recordkeeping than are U.S. issuers, and therefore all material information regarding these issuers may not be available. Additionally, foreign governments may adopt rules or regulations that may negatively impact the Fund’s ability to invest in foreign securities or may prevent the Fund from repatriating its investments.

*Industry Concentration Risk.* In following its methodology, the Underlying Index from time to time may be concentrated to a significant degree in Preferred Securities of issuers located in a single industry or a sector. To the extent that the Underlying Index concentrates in the securities of issuers in a particular industry or sector, the Fund also will concentrate its investments to approximately the same extent. By concentrating its investments in an industry or sector, the Fund faces more risks than if it were diversified broadly over numerous industries or sectors. Such industry-based risks, any of which may adversely affect the companies in which the Fund invests, may include, but are not limited to, the following: general economic conditions or cyclical market patterns that could negatively affect supply and demand in a particular industry; competition for resources, adverse labor relations, political or world events; obsolescence of technologies; and increased competition or new product introductions that may affect the profitability or viability of companies in an industry. In addition, at times, such industry or sector may be out of favor and underperform other industries or the market as a whole.

*Market Risk.* Securities in the Underlying Index are subject to market fluctuations. You should anticipate that the value of the Shares will decline, more or less, to the same extent as any decline in value of the securities in the Underlying Index.

*Market Trading Risk.* The Fund faces numerous market trading risks, including the potential lack of an active market for the Shares, losses from trading in secondary markets, and disruption in the creation/redemption process of the Fund. Any of these factors may lead to the Shares trading at a premium or discount to the Fund’s net asset value (“NAV”).

*Index Risk.* Unlike many investment companies, the Fund does not utilize an investing strategy that seeks returns in excess of the Underlying Index. Therefore, the Fund would not necessarily buy or sell a security unless that security is added or removed, respectively, from the Underlying Index, even if that security generally is underperforming.

*Non-Correlation Risk.* The Fund’s return may not match the return of the Underlying Index for a number of reasons. For example, the Fund incurs operating expenses not applicable to the Underlying Index, and incurs costs in buying and selling securities, especially when rebalancing the Fund’s securities holdings to reflect changes in the composition of the Underlying Index. The Fund’s use of a representative sampling approach may cause the Fund not to be as well-correlated with the return of the Underlying Index as would be the case if the Fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. In addition, the performance of the Fund and the Underlying Index may vary due to asset valuation differences and differences between the Fund’s portfolio and the Underlying Index resulting from legal restrictions, costs or liquidity constraints.

*Sampling Risk.* The Fund’s use of a representative sampling approach may result in its holding a smaller number of securities than are in the Underlying Index. As a result, an adverse development respecting an issuer of securities held by the Fund could result in a greater decline in NAV than would be the case if the Fund held all of the securities in the Underlying Index. To the extent the assets in the Fund are smaller, these risks will be greater.

*Non-Diversified Fund Risk.* Because the Fund is non-diversified and can invest a greater portion of its assets in securities of individual issuers than a diversified fund changes in the market value of a single investment could cause greater fluctuations in Share price than would occur in a diversified fund. This may increase the Fund’s volatility and cause the performance of a relatively small number of issuers to have a greater impact on the Fund’s performance.

*Small- and Mid-Capitalization Company Risk.* Investing in securities of small- and mid-capitalization companies involves greater risk than customarily is associated with investing in larger, more established companies. These companies’ securities may be more volatile and less liquid than those of more established companies. These securities may have returns that vary, sometimes significantly, from the overall securities market. Often small- and mid-capitalization companies and the industries in which they focus are still evolving and, as a result, they may be more sensitive to changing market conditions.

*Issuer-Specific Changes.* The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

## Performance

The bar chart below shows how the Fund has performed. The table below the bar chart shows the Fund's average annual total returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing the Fund's total return in its first calendar year and by showing how the Fund's average annual total return compared with a broad measure of market performance and an additional index with characteristics relevant to the Fund. Although the information shown in the bar chart and the table gives you some idea of the risks involved in investing in the Fund, the Fund's past performance (before and after taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at [www.invescopowershares.com](http://www.invescopowershares.com).

### Annual Total Returns—Calendar Year

### Best Quarter

3.10% (1st Quarter 2015)

### Worst Quarter

(0.84)% (2nd Quarter 2015)

### Average Annual Total Returns for the Periods Ended December 31, 2015

After-tax returns in the table below are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns shown are not relevant to investors who hold Shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	1 Year	Since Inception (05/01/14)
Return Before Taxes	2.99%	2.98%
Return After Taxes on Distributions	1.30%	1.47%
Return After Taxes on Distributions and Sale of Fund Shares	2.15%	1.88%
Wells Fargo® Hybrid and Preferred Securities Floating and Variable Rate Index (reflects no deduction for fees, expenses or taxes)	3.37%	3.42%
S&P U.S. Preferred Stock Index (reflects no deduction for fees, expenses or taxes)	5.47%	6.04%

## Management of the Fund

*Investment Adviser.* Invesco PowerShares Capital Management LLC (the "Adviser").

*Portfolio Managers.* The following individuals are responsible jointly and primarily for the day-to-day management of the Fund's portfolio:

Name	Title with Adviser/Trust	Date Began Managing the Fund
Peter Hubbard	Vice President and Director of Portfolio Management of the Adviser and Vice President of the Trust	Since Inception
Jeffrey W. Kernagis	Vice President and Senior Portfolio Manager of the Adviser	Since Inception
Gary Jones	Vice President and Portfolio Manager of the Adviser	Since Inception
Philip Fang	Vice President and Portfolio Manager of the Adviser	Since Inception
Richard Ose	Vice President and Portfolio Manager of the Adviser	Since Inception

## Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only with authorized participants ("APs") and only in large blocks of 100,000 Shares (each block of Shares is called a "Creation Unit"), or multiples thereof ("Creation Unit Aggregations"), in exchange for the deposit or delivery of a basket of securities. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may be purchased and sold only on a national securities exchange through brokers. Shares are expected to be listed for trading on NYSE Arca, Inc. and because the Shares will trade at market prices rather than NAV, Shares may trade at prices greater than NAV (at a premium), at NAV, or less than NAV (at a discount).

## Tax Information

The Fund's distributions will generally be taxable, typically as either ordinary income or long-term capital gain, unless you are invested through a tax-deferred arrangement, such as a 401(k) plan or an individual retirement account; in such cases, taxation will be deferred until assets are withdrawn from the plan. A sale of Shares may result in capital gain or loss.

# PowerShares VRDO Tax-Free Weekly Portfolio

## Summary Information

### Investment Objective

The PowerShares VRDO Tax-Free Weekly Portfolio (the "Fund") seeks investment results that generally correspond (before fees and expenses) to the price and yield of the Bloomberg US Municipal AMT-Free Weekly VRDO Index (the "Underlying Index").

### Fund Fees and Expenses

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund ("Shares"). Investors may pay brokerage commissions on their purchases and sales of Shares, which are not reflected in the table or the example below.

#### Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.25%
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.25%

### Example

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. This example does not include the brokerage commissions that investors may pay to buy and sell Shares. Although your actual costs may be higher or lower, your costs, based on these assumptions, would be:

1 Year	3 Years	5 Years	10 Years
\$26	\$80	\$141	\$318

### Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund did not have a portfolio turnover rate, since the Fund invested only in securities that are excluded from portfolio turnover rate calculations.

### Principal Investment Strategies

The Fund generally will invest at least 80% of its total assets in variable rate demand obligation ("VRDO") bonds that are exempt from federal income tax with interest rates that reset weekly, which comprise the Underlying Index. Bloomberg Finance L.P. (collectively with its affiliates, "Bloomberg" or the "Index Provider") compiles and calculates the Underlying Index, which is comprised of municipal securities issued in the primary market as VRDOs. Bonds in the Underlying Index that are to be included in the Index must be rated by at least one of the following statistical ratings agencies: Moody's Investors Services, Inc. ("Moody's") as A-3 for long-term bonds or Prime-2 for short-term bonds; by Standard & Poor's, a division of The McGraw-Hill Company, Inc. ("S&P") as A- for long-term bonds or A-2 for short-term bonds; and by Fitch Ratings, Inc. ("Fitch") as A- for long-term bonds or F-2 for short-term bonds. The Fund does not purchase all of the

securities in the Underlying Index; instead, the Fund utilizes a “sampling” methodology to seek to achieve its investment objective.

*Concentration Policy.* The Fund will concentrate its investments (i.e., invest 25% or more of the value of its total assets) in securities of issuers in any one industry or sector only to the extent that the Underlying Index reflects a concentration in that industry or sector. The Fund will not otherwise concentrate its investments in securities of issuers in any one industry or sector.

### **Principal Risks of Investing in the Fund**

The following summarizes the principal risks of the Fund.

#### **The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.**

*Fixed-Income Securities Risk.* Fixed-income securities are subject to interest rate risk and credit risk. Interest rate risk refers to fluctuations in the value of a fixed-income security resulting from changes in the general level of interest rates. When the general level of interest rates goes up, the prices of most fixed-income securities go down. When the general level of interest rates goes down, the prices of most fixed-income securities go up. Fixed-income securities with longer maturities typically are more sensitive to changes in interest rates, making them more volatile than securities with shorter maturities. Credit risk refers to the possibility that the issuer of a security will be unable and/or unwilling to make timely interest payments and/or repay the principal on its debt. Debt instruments are subject to varying degrees of credit risk, which may be reflected in credit ratings. There is a possibility that the credit rating of a fixed-income security may be downgraded after purchase, which may adversely affect the value of the security.

*Changing Fixed-Income Market Conditions.* The current historically low interest rate environment was created in part by the Federal Reserve Board (“FRB”) and certain foreign central banks keeping the federal funds and equivalent foreign rates at or near zero. The “tapering” in 2015 of the FRB’s quantitative easing program, combined with the FRB’s recent raising of the target range for the Federal Funds Rate (and likely eventual increase in equivalent foreign rates) may expose fixed-income markets to heightened volatility and reduced liquidity for certain fixed-income investments, particularly those with longer maturities, although it is difficult to predict the impact of this rate increase and any future rate increases on various markets. In addition, decreases in fixed-income dealer market-making capacity may also potentially lead to heightened volatility and reduced liquidity in the fixed-income markets. As a result, the value of the Fund’s investments and Share price may decline. Changes in central bank policies could also result in higher than normal shareholder redemptions, which could potentially increase portfolio turnover rate and the Fund’s transaction costs.

*Variable Rate Debt Obligations Risk.* There may not be an active secondary market with respect to particular variable rate instruments in which the Fund invests, which could make disposing of a variable rate instrument difficult during periods that the Fund is not

entitled to exercise its demand rights or if the issuer and/or the Remarketing Agent defaulted on its payment obligation. This could cause the Fund to suffer a loss with respect to such instruments.

*Municipal Securities Risk.* Litigation, legislation or other political events, local business or economic conditions or the bankruptcy of the issuer could have a significant effect on the ability of an issuer of municipal securities to make payments of principal and/or interest. Political changes and uncertainties in the municipal market related to taxation, legislative changes or the rights of municipal security holders can significantly affect municipal securities. Because many securities are issued to finance similar projects, especially those relating to education, health care, transportation and utilities, conditions in those sectors can affect the overall municipal market. In addition, changes in the financial condition of an individual municipal issuer can affect the overall municipal market. If the Internal Revenue Service (“IRS”) determines that an issuer of a municipal security has not complied with applicable tax requirements, interest from the security could become taxable and the security could decline significantly in value.

*Municipal Insurance Risk.* The municipal securities that the Fund holds may be covered by insurance that guarantees the bond’s scheduled payment of interest and repayment of principal. Municipal security insurance does not insure against market fluctuations or fluctuations in the Fund’s Share price. In addition, a municipal security insurance policy will not cover: (i) repayment of a municipal security before maturity (redemption), (ii) prepayment or payment of an acceleration premium (except for a mandatory sinking fund redemption) or any other provision of a bond indenture that advances the maturity of the bond, or (iii) nonpayment of principal or interest caused by negligence or bankruptcy of the paying agent. A mandatory sinking fund redemption may be a provision of a municipal security issue whereby part of the municipal security issue may be retired before maturity.

*Tax Risk.* There is no guarantee that the Fund’s income will be exempt from federal or state income taxes. Events occurring after the date of issuance of a municipal bond or after the Fund’s acquisition of a municipal bond may result in a determination that interest on that bond is includible in gross income for federal income tax purposes retroactively to its date of issuance. Such a determination may cause a portion of prior distributions by the Fund to its shareholders to be taxable to those shareholders in the year of receipt. Federal or state changes in income or alternative minimum tax rates or in the tax treatment of municipal bonds may make municipal bonds less attractive as investments and cause them to lose value.

*Call Risk.* If interest rates fall, it is possible that issuers of callable securities with high interest coupons will “call” (or prepay) their bonds before their maturity date. If an issuer exercised such a call during a period of declining interest rates, the Fund may have to replace such called security with a lower yielding security. If that were to happen, the Fund’s net investment income could fall.

**Market Risk.** Securities in the Underlying Index are subject to market fluctuations. You should anticipate that the value of the Shares will decline, more or less, in correlation with any decline in value of the securities in the Underlying Index.

**Market Trading Risk.** The Fund faces numerous market trading risks, including the potential lack of an active market for the Shares, losses from trading in secondary markets, and disruption in the creation/redemption process of the Fund. Any of these factors may lead to the Shares trading at a premium or discount to the Fund's net asset value ("NAV").

**Sampling Risk.** The Fund's use of a representative sampling approach will result in it holding a smaller number of securities than are in the Underlying Index. As a result, an adverse development to an issuer of securities that the Fund holds could result in a greater decline in NAV than would be the case if the Fund held all of the securities in the Underlying Index. To the extent the assets in the Fund are smaller, these risks will be greater.

**Cash Transaction Risk.** Unlike most exchange-traded funds ("ETFs"), the Fund currently intends to effect creations and redemptions principally for cash, rather than principally in-kind, due to the nature of the Fund's investments. As such, an investment in Shares may be less tax efficient than an investment in shares of conventional ETFs, which utilize an entirely in-kind redemption process. Also, there may be a substantial difference in the after-tax rate of return between the Fund and conventional ETFs.

**Non-Correlation Risk.** The Fund's return may not match the return of the Underlying Index for a number of reasons. For example, the Fund incurs operating expenses not applicable to the Underlying Index, and incurs costs in buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Underlying Index. Because the Fund issues and redeems Creation Units (as defined below) principally for cash, it will incur higher costs in buying and selling securities than if it issued and redeemed Creation Units principally in-kind. Additionally, the Fund's use of a representative sampling approach may cause the Fund not to be as well-correlated with the return of the Underlying Index as would be the case if the Fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. In addition, the performance of the Fund and the Underlying Index may vary due to asset valuation differences and differences between the Fund's portfolio and the Underlying Index resulting from legal restrictions, costs or liquidity constraints. In addition to the above, the Fund's correlation to its Underlying Index may be adversely affected by a low yield environment.

**Index Risk.** Unlike many investment companies, the Fund does not utilize an investing strategy that seeks returns in excess of its Underlying Index. Therefore, it would not necessarily buy or sell a security unless that security is added or removed, respectively, from the Underlying Index, even if that security generally is underperforming.

**Issuer-Specific Changes.** The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

## Performance

The bar chart below shows how the Fund has performed. The table below the bar chart shows the Fund's average annual total returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing how the Fund's total return has varied from year to year and by showing how the Fund's average annual total returns compared with a broad measure of market performance and an additional index with characteristics relevant to the Fund. Although the information shown in the bar chart and the table gives you some idea of the risks involved in investing in the Fund, the Fund's past performance (before and after taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at [www.invescopowershares.com](http://www.invescopowershares.com).

### Annual Total Returns—Calendar Years

#### Best Quarter

0.86% (1st Quarter 2008)

#### Worst Quarter

(0.04)% (1st, 3rd and 4th Quarters 2014 and 1st, 2nd, 3rd and 4th Quarters, 2015)

### Average Annual Total Returns for the Periods Ended December 31, 2015

After-tax returns in the table below are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns shown are not relevant to investors who hold Shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	1 Year	5 Years	Since Inception (11/15/07)
Return Before Taxes	(0.16)%	0.08%	0.70%
Return After Taxes on Distributions	(0.16)%	0.08%	0.69%
Return After Taxes on Distributions and Sale of Fund Shares	(0.09)%	0.09%	0.70%
Bloomberg US Municipal AMT-Free Weekly VRDO Index <sup>(1)</sup> (reflects no deduction for fees, expenses or taxes)	0.04%	0.13%	N/A
Barclays Municipal 1 Year Index (reflects no deduction for fees, expenses or taxes)	0.61%	0.88%	1.77%
Blended-Bloomberg US Municipal AMT-Free Weekly VRDO Index <sup>(2)</sup> (reflects no deduction for fees, expenses or taxes)	0.04%	0.13%	0.61%

- (1) Effective August 5, 2010, the Fund's underlying index changed to the Bloomberg US Municipal AMT-Free Weekly VRDO Index. Prior to August 5, 2010, the Fund's original underlying index was the Thomson Municipal Market Data VRDO Index. "Since Inception" performance for the Bloomberg US Municipal AMT-Free Weekly VRDO Index is not available because the index did not commence calculation and publication until July 30, 2010.
- (2) The data shown as "Blended" is performance comprised of the performance of the original underlying index (Thomson Municipal Market Data VRDO Index) from Fund inception up to the index conversion date, August 5, 2010, followed by the performance of the new underlying index starting at the index conversion date and through December 31, 2015.

## Management of the Fund

**Investment Adviser.** Invesco PowerShares Capital Management LLC (the "Adviser").

**Portfolio Managers.** The following individuals are responsible jointly and primarily for the day-to-day management of the Fund's portfolio:

Name	Title with Adviser/Trust	Date Began Managing the Fund
Peter Hubbard	Vice President and Director of Portfolio Management of the Adviser and Vice President of the Trust	Since Inception
Jeffrey W. Kernagis	Vice President and Senior Portfolio Manager of the Adviser	Since Inception
Gary Jones	Vice President and Portfolio Manager of the Adviser	January 2012
Philip Fang	Vice President and Portfolio Manager of the Adviser	Since Inception
Richard Ose	Vice President and Portfolio Manager of the Adviser	February 2014

## Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only with authorized participants ("APs") and only in large blocks of 50,000 Shares (each block of Shares is called a "Creation Unit"), or multiples thereof ("Creation Unit Aggregations"), in exchange for the deposit or delivery of cash. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may be purchased and sold only on a national securities exchange through brokers. Shares are listed for trading on NYSE Arca, Inc. and because the Shares will trade at market prices rather than NAV, Shares may trade at prices greater than NAV (at a premium), at NAV, or less than NAV (at a discount).

## Tax Information

Dividends paid by the Fund that are designated properly as exempt-interest dividends will not be subject to federal income tax. The Fund intends to invest its assets in a manner such that a significant portion of its dividend distributions to shareholders will generally be exempt from federal income taxes (interest paid on municipal securities, however, may be subject to the alternative minimum tax in the hands of corporate shareholders).

The Fund's distributions, other than net tax-exempt income, will generally be taxable, typically as either ordinary income or long-term capital gain, unless you are invested through a tax-deferred arrangement, such as a 401(k) plan or an individual retirement account; in such cases, taxation will be deferred until assets are withdrawn from the plan. A sale of Shares may result in capital gain or loss.

---

## Additional Information About the Funds' Strategies and Risks

### Principal Investment Strategies

Each Fund generally will invest at least 80% of its total assets in securities that comprise its respective Underlying Index (except PowerShares CEF Income Composite Portfolio and PowerShares Variable Rate Preferred Portfolio, each of which will invest at least 90% of its total assets in securities included in its Underlying Index). Each Fund operates as an index fund and is not actively managed. Each Fund uses an "indexing" investment approach to attempt to seek investment results that generally correspond, before fees and expenses, to the performance of its Underlying Index. The Adviser (and for PowerShares Senior Loan Portfolio, the Sub-Adviser) seeks correlation over time of 0.95 or better between a Fund's performance and the performance of its Underlying Index; a figure of 1.00 would represent perfect correlation. Another means of evaluating the relationship between the returns of a Fund and its Underlying Index is to assess the "tracking error" between the two. Tracking error means the variation between each Fund's annual return and the return of its Underlying Index, expressed in terms of standard deviation. Each Fund seeks to have a tracking error of less than 5%, measured on a monthly basis over a one-year period by taking the standard deviation of the difference in the Fund's returns versus its Underlying Index's returns. Because each Fund uses an indexing approach to try to achieve its investment objective, each Fund does not take temporary defensive positions during periods of adverse market, economic or other conditions.

Each of PowerShares 1-30 Laddered Treasury Portfolio and PowerShares CEF Income Composite Portfolio generally invests in all of the securities comprising its Underlying Index in proportion to the weightings of the securities in the Underlying Index. However, under various circumstances, it may not be possible or practicable to purchase all of those securities in those same weightings. In those circumstances, certain funds may purchase a sample of securities in its Underlying Index.

For each Fund (except for PowerShares 1-30 Laddered Treasury Portfolio and PowerShares CEF Income Composite Portfolio), because of the practical difficulties and expense of purchasing all of the securities in each Fund's respective Underlying Index, each Fund does not purchase all of the securities in its Underlying Index; instead, each Fund utilizes a "sampling" methodology to seek to achieve its respective investment objective. Sampling means that the Adviser (and for PowerShares Senior Loan Portfolio, the Sub-Adviser) uses a quantitative analysis to select securities from the applicable Underlying Index universe to obtain a representative sample of securities that have, in the aggregate, investment characteristics similar to the Underlying Index in terms of key risk factors, performance attributes and other characteristics. These attributes and other characteristics include duration, maturity, credit quality, yield and coupon. The Adviser (and for PowerShares Senior Loan Portfolio, the Sub-Adviser) generally expects each Fund that utilizes the sampling methodology to hold less than the total number of securities in the applicable Underlying Index, but reserves the right to hold as many securities as it believes necessary to achieve each Fund's investment objective.

There also may be instances in which the Adviser or Sub-Adviser, as applicable, may choose to (i) overweight a security in an Underlying Index, (ii) purchase securities not contained in the Underlying Index that the Adviser or Sub-Adviser believe are appropriate to substitute for certain securities in that Underlying Index or (iii) utilize various combinations of other available investment techniques in seeking to track an Underlying Index. Each Fund may sell securities that are represented in the applicable Underlying Index in anticipation of their removal from the Underlying Index or purchase securities not represented in the Underlying Index in anticipation of their addition to the Underlying Index.

Additional information about the construction of each Fund's Underlying Index is set forth below in alphabetical order by index name.

#### ***Bloomberg US Municipal AMT-Free Weekly VRDO Index (PowerShares VRDO Tax-Free Weekly Portfolio)***

The Underlying Index for the PowerShares VRDO Tax-Free Weekly Portfolio is comprised of municipal securities issued in the primary market as VRDOs. Only VRDOs whose interest rates are reset weekly are included in the Underlying Index, and the Underlying Index excludes secondary or derivative VRDOs (tender option bonds). To be included in the Underlying Index, constituents must be rated by at least one of the following statistical rating agencies at the following minimum ratings: Moody's Investors Services, Inc. ("Moody's") as A-3 for long-term bonds or Prime-2 for short-term bonds; by Standard & Poor's, a division of The McGraw-Hill Company, Inc. ("S&P") as A- for long-term bonds or A-2 for short-term bonds; and by Fitch Ratings, Inc. ("Fitch") as A- for long-term bonds or F-2 for short-term bonds. The Index Provider rebalances the Underlying Index monthly, with individual bonds weighted by market value.

#### ***The BofA Merrill Lynch Build America Bond Index (PowerShares Build America Bond Portfolio)***

The BofA Merrill Lynch Build America Bond Index tracks the performance of U.S. dollar-denominated investment grade taxable municipal debt publicly issued under the Build America Bond program by U.S. states and territories and their political subdivisions in the U.S. market. Qualifying securities must have a minimum amount outstanding of \$1 million, at least 18 months remaining term to final maturity at the time of issuance and at least one year remaining term to final maturity, a fixed coupon schedule and an investment grade rating, based on an average of Moody's, S&P and Fitch. In addition, qualifying securities must be "direct pay" (i.e., a direct federal subsidy is paid to the issuer). The call date on which a pre-refunded bond will be redeemed is used for purposes of determining qualification with respect to final maturity requirements. Original issue zero coupon bonds qualify for inclusion in the Index. All Rule 144A securities, both with and without registration rights, and all defaulted securities are excluded from the Underlying Index for PowerShares Build America Bond Portfolio.

Constituents in the Underlying Index are capitalization-weighted based on their current amount outstanding times price plus accrued interest. Accrued interest is calculated assuming next-day settlement. Cash flows from bond payments that are received

during the month are retained in the Underlying Index until the end of the month and then are removed as part of the rebalancing. Cash does not earn any reinvestment income while it is held in the Underlying Index. The Index Provider rebalances the Underlying Index on the last calendar day of the month, based on information available up to and including the third business day before the last business day of the month. The Index Provider includes issues that meet the qualifying criteria in the Underlying Index for the following month. Issues that no longer meet the criteria during the course of the month remain in the Index until the next month-end rebalancing, at which point the Index Provider removes them from the Underlying Index.

***The BofA Merrill Lynch California Long-Term Core Plus Municipal Securities Index (PowerShares California AMT-Free Municipal Bond Portfolio)***

The BofA Merrill Lynch California Long-Term Core Plus Municipal Securities Index is designed to track the performance of U.S. dollar-denominated, investment grade, tax-exempt debt publicly issued by California or any U.S. territory, including Puerto Rico, and their political subdivisions, in the U.S. domestic market. Qualifying securities must have at least 15 years remaining term to final maturity, a fixed coupon schedule, a minimum amount outstanding of \$25 million per maturity and an investment grade rating (based on an average of Moody's, S&P and Fitch). The Index Provider excludes Single-Family Housing, Multi-Family Housing, Tobacco, original issue zero coupon, Rule 144A, taxable and AMT bonds from the Underlying Index.

The Index Provider retains cash flows from bond payments that are received during the month in the Underlying Index until the end of the month and then removes them as part of the rebalancing. Cash does not earn any reinvestment income while it is held in the Underlying Index. Accrued interest is calculated assuming next-day settlement. The Index Provider rebalances the Underlying Index on the last calendar day of the month based on information available up to and including the third business day before the last business day of the month. The Index Provider includes issues that meet the qualifying criteria in the Underlying Index for the following month. Issues that no longer meet the criteria during the course of the month remain in the Underlying Index until the next month-end rebalancing, at which point the Index Provider removes them from the Underlying Index.

***The BofA Merrill Lynch Core Plus Fixed Rate Preferred Securities Index (PowerShares Preferred Portfolio)***

The BofA Merrill Lynch Core Plus Fixed Rate Preferred Securities Index tracks the performance of fixed rate U.S. dollar denominated preferred securities issued in the U.S. domestic market. Qualifying securities must be rated at least B3 (based on an average of Moody's, S&P and Fitch) and must have an investment grade rated country of risk (based on an average of Moody's, S&P and Fitch foreign currency long-term sovereign debt ratings). In addition, qualifying securities must be issued as public securities or through a Rule 144A filing, must be issued in \$25, \$50, or \$100 par/liquidation preference increments, must have a fixed coupon or dividend schedule, must have a minimum amount outstanding of \$100 million and must have at least 18 months remaining term to final maturity at the time of issuance and at least one year

remaining term to final maturity as of the rebalancing date. Fixed-to-floating rate securities qualify for inclusion in the Underlying Index, provided they are callable within the fixed rate period and are at least one year from the last call prior to the date the bond transitions from a fixed to a floating rate security. The Underlying Index includes preference shares (perpetual preferred securities), ADRs, domestic and Yankee trust preferred securities having a minimum remaining term of at least one year, both dividend received deduction ("DRD")-eligible and non-DRD eligible preferred stock and senior debt. The Index Provider excludes from the Underlying Index auction market securities, convertibles, floaters, purchase units, purchase contracts, corporate pay-in-kind securities, securities issued by closed-end funds and derivative instruments such as repackaged securities, credit default swaps and \$1,000 par securities. Unlisted preferred securities are excluded from the Underlying Index, but unlisted senior or subordinated debt-like securities are included.

The Index Provider capitalization-weights constituents in the Underlying Index based on their current amount outstanding times price. The Index Provider retains cash flows from bond payments that are received during the month in the Underlying Index until the end of the month and then removes them as part of the rebalancing. Cash does not earn any reinvestment income while it is held in the Underlying Index. The Index Provider rebalances the Underlying Index on the last calendar day of the month, based on information available up to and including the third business day before the last business day of the month. The Index Provider includes issues that meet the qualifying criteria in the Underlying Index for the following month. Issues that no longer meet the criteria during the course of the month remain in the Underlying Index until the next month-end rebalancing, at which point the Index Provider removes them from the Underlying Index.

***The BofA Merrill Lynch National Long-Term Core Plus Municipal Securities Index (PowerShares National AMT-Free Municipal Bond Portfolio)***

The BofA Merrill Lynch National Long-Term Core Plus Municipal Securities Index is designed to track the performance of U.S. dollar-denominated, investment grade, tax-exempt long-term debt publicly issued by U.S. states and territories, and their political subdivisions, in the U.S. domestic market. Qualifying securities must have at least 15 years remaining term to final maturity, a fixed coupon schedule, a minimum amount outstanding of \$25 million per maturity and an investment grade rating (based on an average of Moody's, S&P and Fitch). The Index Provider excludes Single-Family Housing, Multi-Family Housing, Tobacco, original issue zero coupon, Rule 144A, taxable and AMT bonds from the Underlying Index.

The Index Provider retains cash flows from bond payments that are received during the month in the Underlying Index until the end of the month and then removes them as part of the rebalancing. Cash does not earn any reinvestment income while it is held in the Underlying Index. Accrued interest is calculated assuming next-day settlement. The Index Provider rebalances the Underlying Index on the last calendar day of the month based on information available up to and including the third business day before the last business day of the month. The Index Provider

includes issues that meet the qualifying criteria in the Underlying Index for the following month. Issues that no longer meet the criteria during the course of the month remain in the Underlying Index until the next month-end rebalancing, at which point the Index Provider removes them from the Underlying Index.

***The BofA Merrill Lynch New York Long-Term Core Plus Municipal Securities Index (PowerShares New York AMT-Free Municipal Bond Portfolio)***

The BofA Merrill Lynch New York Long-Term Core Plus Municipal Securities Index is designed to track the performance of U.S. dollar-denominated, investment grade, tax-exempt debt publicly issued by New York or any U.S. territory, including Puerto Rico, and their political subdivisions, in the U.S. domestic market. Qualifying securities must have at least 15 years remaining term to final maturity, a fixed coupon schedule, a minimum amount outstanding of \$25 million per maturity and an investment grade rating (based on an average of Moody's, S&P and Fitch). The Index Provider excludes Single-Family Housing, Multi-Family Housing, Tobacco, original issue zero coupon, Rule 144A, taxable and AMT bonds from the Underlying Index.

The Index Provider retains cash flows from bond payments that are received during the month in the Underlying Index until the end of the month and then removes them as part of the rebalancing. Accrued interest is calculated assuming next-day settlement. Cash does not earn any reinvestment income while it is held in the Underlying Index. The Index Provider rebalances the Underlying Index on the last calendar day of the month based on information available up to and including the third business day before the last business day of the month. The Index Provider includes issues that meet the qualifying criteria in the Underlying Index for the following month. Issues that no longer meet the criteria during the course of the month remain in the Underlying Index until the next month-end rebalancing, at which point the Index Provider removes them from the Underlying Index.

***Citi Custom Dim Sum (Offshore CNY) Bond Index (PowerShares Chinese Yuan Dim Sum Bond Portfolio)***

The Citi Custom Dim Sum (Offshore CNY) Bond Index is designed to provide exposure to RMB-denominated bonds that are issued and settled outside of mainland China. Strictly in accordance with the Underlying Index's guidelines and mandated procedures, securities must have a minimum maturity of one month and an outstanding amount of RMB 1 billion to be eligible for entry into the Underlying Index. There is no minimum rating requirement for inclusion in the Underlying Index. Securities with a maturity of less than one month are removed from the Underlying Index. The Underlying Index is composed of RMB-denominated bonds issued by governments, agencies, supnationals and corporations, excluding synthetics, convertible bonds, retail bonds and CDs. The Index Provider rebalances the Underlying Index monthly.

***DBIQ Emerging Market USD Liquid Balanced Index (PowerShares Emerging Markets Sovereign Debt Portfolio)***

The Underlying Index for PowerShares Emerging Markets Sovereign Debt Portfolio is constructed in two phases.

The first phase establishes a broad "Underlying Index Membership," which represents all of the bonds eligible for inclusion in the Underlying Index. The Index Provider first establishes a list of eligible countries on an annual basis based on ratings, size, liquidity and other considerations. Once the list of countries is set, the Index Provider generates the "Underlying Index Membership" by applying the criteria described below to all outstanding bonds:

- Issued in U.S. dollars;
- Sovereign bond;
- At least three years remain to maturity at the time of selection;
- Outstanding amount of \$500 million or greater;
- Fixed coupon bond; and
- Not a domestic issue, Rule 144A security, private placement, Brady Bond, restructured bond, bond in default, floating/variable coupon bond, sinking bond, callable bond, putable bond, zero coupon/zero coupon step-up bonds, bonds without cash flows, convertibles, inflation linked, other index-linked, cum or ex-warrant, floating rate notes with coupon cap, perpetual and accrued only bonds.

The second phase of the construction process seeks to optimize both potential performance and liquidity, while limiting turnover within the Underlying Index constituents. The Index Provider achieves this by selecting one to three bonds for each eligible country from the "Underlying Index Membership" according to the following criteria:

- (1) Each emerging market country with at least one eligible security will be included in the Underlying Index;
- (2) Each emerging market country cannot have more than three securities included from the "Underlying Index Membership" list;
- (3) Bonds within each emerging market country are selected on the basis of potential outperformance;
- (4) Each eligible emerging market country included will be given an equal weighting in the Underlying Index annually on the calendar day before March 1; and
- (5) Within each eligible emerging market country, each bond is given an equal market value weight annually on the calendar day before March 1.

The resulting Underlying Index consists of one to three bonds from each eligible emerging market country. The Index Provider generates the Underlying Index Membership on a quarterly basis, three business days before June 1, September 1 and December 1 of each year. Market values only are reset to equal between the eligible emerging market countries annually.

If an indexed bond defaults during the year, the Index Provider will replace it with another qualifying bond from the same country at month-end. Between the time the bond defaulted and month-end, the market value from the replaced bond is kept as cash. The Index Provider uses the cash to buy the replacing bond at ask price at month-end. If a replacement cannot be found for a defaulted bond from the same country, the Index Provider will

remove the country from the Underlying Index at quarter-end. In the period between the default and the next quarter rebalancing, the market value from the replaced bond(s) is kept as cash. The Index Provider will re-invest the cash proportionally to all other countries at month-end. Valuation data regarding the Underlying Index is available via Bloomberg, L.P.

### ***DB Global Short Maturity High Yield Bond Index (PowerShares Global Short Term High Yield Bond Portfolio)***

The Underlying Index for the PowerShares Global Short Term High Yield Bond Portfolio is designed to track the performance of a select group of short-term, U.S. dollar-denominated, noninvestment grade bonds that are issued by U.S. and foreign corporations, as well as by sovereign, sub-sovereign or quasi-government entities. Rule 144A securities, private placements, municipal bonds, Brady bonds, restructured bonds and covered, senior secured and subordinate notes are excluded from the Underlying Index.

To be eligible for inclusion in the Underlying Index, a bond must: (i) be denominated in U.S. dollars; (ii) be rated by at least one of S&P, Moody's or Fitch; (iii) be rated below "investment grade" (i.e., have a "composite rating" from DB of no greater than "BB+", but no less than "C"); (iv) have three years or less to maturity; and (v) have a fixed coupon.

In addition, "short-term" bonds (i.e., bonds that have three years or less until maturity from the date they were issued) other than Eurodollar bonds must have a minimum amount outstanding of at least \$100 million, and "long-term seasoned" bonds (i.e., bonds that had a maturity longer than three years at the date they were issued, but currently have three years or less until maturity) other than Eurodollar bonds must have a minimum amount outstanding of at least \$250 million. Short-term Eurodollar bonds must have more than \$200 million outstanding and long-term seasoned Eurodollar bonds must have more than \$350 million outstanding.

The Index Provider calculates the cumulative weight of bonds issued by each country. The cumulative weight of bonds from any one country will not exceed 40% of the weight of the Underlying Index. The Index Provider weights the constituents equally on an annual basis and rebalances the Underlying Index quarterly. If a bond reaches maturity, defaults or no longer meets the Underlying Index's eligibility criteria, the Index Provider will remove it from the Underlying Index, but will keep the redemption value of that bond in the Underlying Index as cash until the next rebalancing date.

### ***NASDAQ LadderRite® 0-5 Year USD Corporate Bond Index (PowerShares LadderRite 0-5 Year Corporate Bond Portfolio)***

The NASDAQ LadderRite® 0-5 Year USD Corporate Bond Index is designed to track a basket of investment grade bonds issued by U.S. and foreign corporations. The Underlying Index uses an equally weighted annual maturity ladder with bond durations up to five years until maturity.

To be eligible for inclusion in the Underlying Index, a bond must: (i) be denominated in U.S. dollars; (ii) pay fixed amounts of taxable interest; (iii) be rated as "investment grade" by at least any one of S&P, Moody's or Fitch (i.e., have a grade of BBB- or

higher from Fitch or S&P or of Baa3 or higher from Moody's); (iv) have an outstanding face value of at least \$500 million; and (v) have five years or less to maturity. Bonds must have an initial term to maturity of at least one year to be eligible for inclusion in the Underlying Index. As of the date of this prospectus, the Underlying Index may include bonds from companies domiciled in the United States, Canada, Japan, Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and the United Kingdom.

Regulation S bonds, Rule 144A bonds, Eurodollar, retail bonds, floating rate bonds, zero coupon bonds, convertible bonds, bonds cum or ex-warrant, bonds with one cash flow only, inflation- or index-linked bonds, bonds guaranteed by an agency, national or supranational government, bonds cum or ex-warrant, bonds with one cash flow only are excluded from the Underlying Index.

The Index Provider initially separates each constituent bond into groups based on each year of maturity (each, a "maturity tranche"), with equal weights being given to each maturity tranche. Within each maturity tranche, the Index Provider employs a market value weighting methodology to weight individual positions. On a monthly basis, the Index Provider will rebalance each maturity tranche to incorporate any new bonds that qualify for inclusion (subject to a minimum seasoning period of 90 days for new securities) and to remove any bonds that no longer qualify for inclusion. On a monthly basis, the Index Provider rebalances the Underlying Index only if the maturity allocations have moved beyond limits set by the Index Provider. Once added to the Underlying Index, a bond will be held to maturity unless it ceases to meet the criteria for inclusion. If a bond pays a coupon, is called or reaches maturity, the Index Provider will keep the value of the proceeds as cash until the next rebalancing date.

### ***RAFI™ Bonds US High Yield 1-10 Index (PowerShares Fundamental High Yield® Corporate Bond Portfolio)***

The Underlying Index for PowerShares Fundamental High Yield® Corporate Bond Portfolio is comprised of U.S. dollar-denominated bonds which are SEC-registered securities or Rule 144A securities with registration rights (issued after July 31, 2013) and whose issuers are public companies listed on a major U.S. stock exchange. Only non-convertible, non-exchangeable, non-zero, fixed coupon investible high-yield corporate bonds qualify for inclusion in the Underlying Index. Bonds of foreign agencies, governments or supra-nationals, as well as those issuers that are not domiciled in the United States are excluded from the Underlying Index. The Index Provider rebalances the Underlying Index at the end of every month and weights the constituents annually on March 31 according to a composite RA weight that is calculated for each eligible company. Composite RA weights are comprised of individual RA weights calculated for each company using each of the following four fundamental corporate accounting variables: book value of assets, gross sales, gross dividends and cash flow. Each company receives a composite RA weight equal to the ratio of its sales (or cash flow, dividends or book value of assets) to the aggregate sales (or cash flow, dividends or book value of assets) across all companies in the sample. If a company does not pay any dividends, the composite calculation does not give it a zero weight on that metric, but rather computes its weight as an

equally-weighted average of the remaining three metrics. The Index Provider will remove companies that receive a negative composite weight from the Underlying Index. Each issue must be rated Ba1/BB+ or lower by either Moody's or S&P, but not below B3/B- by either Moody's or S&P. Bonds that fall outside this range due to intra-month rating upgrades or downgrades are removed from the Underlying Index at month-end. All issues in the Underlying Index must have a minimum of two-year call protection. Poison puts and make-whole provisions, which allow the creditor or borrower, respectively, the right to require re-payment of the amount owed before the debt's maturity, are allowed.

The Index Provider divides the Underlying Index into two distinct maturity cells—1 to 5 years and 5 to 10 years—and selects the largest issue per maturity cell. As a result, the Underlying Index will have up to two bonds per issuer. If there is more than one issue with the same amount outstanding, then the Index Provider selects the most recent issue.

***RAFI™ Bonds US Investment Grade 1-10 Index (PowerShares Fundamental Investment Grade Corporate Bond Portfolio)***

The Underlying Index for PowerShares Fundamental Investment Grade Corporate Bond Portfolio is comprised of U.S. dollar-denominated bonds which are SEC-registered securities or Rule 144A securities with registration rights (issued after July 31, 2013) and whose issuers are public companies listed on a major U.S. stock exchange. Only non-convertible, non-exchangeable, non-zero, fixed coupon investible investment grade corporate bonds with greater than one year to maturity qualify for inclusion in the Underlying Index. Bonds of foreign agencies, governments or supra-nationals, as well as those issuers that are not domiciled in the United States are excluded from the Underlying Index. The Index Provider rebalances the Underlying Index at the end of every month and weights the constituents annually on March 31 according to a composite RA weight that is calculated for each eligible company. Composite RA weights are comprised of individual RA weights calculated for each company using each of the following four fundamental corporate accounting variables: book value of assets, gross sales, gross dividends and cash flow. Each company receives a composite RA weight equal to the ratio of its sales (or cash flow, dividends or book value of assets) to the aggregate sales (or cash flow, dividends or book value of assets) across all companies in the sample. If a company does not pay any dividends, the composite calculation does not give it a zero weight on that metric, but rather computes its weight as an equally-weighted average of the remaining three metrics. The Index Provider will remove companies that receive a negative composite weight from the Underlying Index. Each issue must be rated BBB/Baa and higher by both Moody's and S&P. Split-rated bonds are ineligible if either rating is below BBB/Baa. Bonds that are downgraded below BBB/Baa during the month are removed from the Underlying Index at month-end. All issues in the Underlying Index must have a minimum of two-year call protection. Poison puts and make-whole provisions, which allow the creditor or borrower, respectively, the right to require re-payment of the amount owed before the debt's maturity, are allowed.

The Index Provider divides the Underlying Index into two distinct maturity cells—1 to 5 years and 5 to 10 years—and selects the largest issue per maturity cell. If there is more than one issue with

the same amount outstanding, then the Index Provider selects the most recent issue. As a result, the Underlying Index will have up to two bonds per issuer.

***Ryan/NASDAQ U.S. 1-30 Year Treasury Laddered Index (PowerShares 1-30 Laddered Treasury Portfolio)***

The Underlying Index for the PowerShares 1-30 Laddered Treasury Portfolio is an equally weighted index of approximately 30 distinct issues with annual maturities from one to 30 years and includes U.S. Treasury-auctioned issues with fixed coupon rates that are non-callable. Treasury inflation-protected securities, bills or zero-coupon securities are not permitted. The Index Provider selects a February maturity for each annual maturity. If more than one February issue is available, the most liquid issue will be selected based upon market conditions. If no February maturity exists, then the most liquid issue closest to that February maturity will be selected with a maximum deviation of six months. As of the date of this Prospectus, there are no bonds for the years 2032 through 2035. The Underlying Index will overweight the issues in 2031 and 2036 to create average 2032, 2033, 2034 and 2035 maturities. In time, as new U.S. Treasury auctions produce bonds for those four years, they will be entered into the Underlying Index and reduce the overweighting in years 2031 and 2036. With that exception, all other issues will be equally weighted. As a bond matures, its proceeds will be reinvested in a 30-year maturity bond so that there will be a continuous maturity "laddered" portfolio of approximately 30 securities, meaning that securities holdings are scheduled to mature in a proportional, annual sequential pattern. Valuation data regarding the Underlying Index is available via Bloomberg, L.P.

***S&P International Corporate Bond Index® (PowerShares International Corporate Bond Portfolio)***

The Underlying Index for PowerShares International Corporate Bond Portfolio is constructed from Eurobonds and global bonds issued in Euros and British Pounds, and domestic corporate bonds denominated in Australia Dollar, Canadian Dollar, Japanese Yen, New Zealand Dollar, Norwegian Krone, Swedish Krona and Swiss Franc. To be included in the Underlying Index, a bond must be issued by a non-U.S. corporation. The country of the issuer must be a "developed country," as classified by the Bank for International Settlements in its international debt securities statistics, and a "developed market" under the S&P Dow Jones Indices' Country Classification. Only non-U.S. dollar, G10 currency denominated bonds are eligible for inclusion in the Underlying Index. Each bond must have a maturity date greater than one year from the last business day of the month of inclusion, and the total outstanding value of such bond must meet a minimum issuance threshold based on the bond's currency. The threshold may change depending on market conditions. Each bond also must be rated investment grade by Moody's or S&P Ratings Service. A bond's lower rating, if rated by both services, is used to determine eligibility for the Underlying Index. Temporary unrated tapped issues, in which the issuer reopens and sells debt instruments from past eligible rated issues, may be included in the Underlying Index. The Index Provider excludes debt issued by governments, government agencies, or any other form of public debt, and corporate debt with a government guarantee or any form of public guarantee from inclusion in the Underlying Index.

The Index Provider weights constituents by respective market values in U.S. dollars and rebalances the weights monthly. In addition, the Index Provider reconstitutes the Underlying Index annually each September. At each monthly rebalancing, single currency exposure is capped at 50%. At each annual rebalancing, if there are more than ten eligible bonds for a given currency, the Index Provider will remove 25% of the lowest-yielding bonds denominated in that currency. The Index Provider first calculates the weight of a bond by dividing the outstanding Underlying Index market value for the bond by the total outstanding Underlying Index market value for the eligible universe, converting all figures to U.S. dollars using spot foreign exchange rates as of the monthly rebalancing date. Then, the Index Provider calculates the aggregated weight for each currency. If the aggregated weight for a currency is more than 50%, the Index Provider modifies the weighting of each bond in this currency so that the modified aggregated weight for this currency is at 50%. The excess weight above the 50% cap is distributed to the remaining currencies according to each currency's aggregated weight.

### **S&P/LSTA U.S. Leveraged Loan 100 Index (PowerShares Senior Loan Portfolio)**

The Underlying Index for PowerShares Senior Loan Portfolio consists of 100 loan facilities drawn from a larger benchmark, the S&P/LSTA (Loan Syndications and Trading Association) Leveraged Loan Index ("LLI"), which covers more than 1224 facilities.

#### *Index Eligibility*

All syndicated leveraged loans covered by the LLI universe are eligible for inclusion in the Underlying Index. Term loans from syndicated credits must meet the following criteria at issuance to be eligible for inclusion in the LLI:

- Senior secured loan;
- Minimum initial term of one year;
- Minimum initial spread of 125 basis points over LIBOR;
- U.S.-dollar-denominated; and
- Par amount outstanding of \$50 million or greater.

Par Amount Outstanding. Loan facilities included in the Underlying Index are among the largest loan facilities from the LLI in terms of par amount outstanding.

Domicile. The Underlying Index covers all issuers regardless of origin; however, all facilities must be denominated in U.S. dollars.

2% Loan Cap. At each weekly review, facilities that exceed 2% of the market capitalization weight of the Underlying Index are reduced to 1.90%.

#### *Index Committee*

The Underlying Index is rules based, although the Underlying Index Committee reserves the right to exercise discretion when necessary.

#### *Timing of Changes*

- *Deletions.* On a weekly basis, the Underlying Index Committee removes facilities from the Underlying Index when they no longer are priced by LSTA/LPC (Loan Pricing Corporation) Mark-to-Market Pricing or when the facility is repaid.

- *Additions.* An Underlying Index addition generally is made only when a vacancy is created during the weekly review. Underlying Index additions are made according to par outstanding and overall liquidity. Liquidity is determined by the par outstanding and number of market bids available.
- *Rebalancing.* The Underlying Index Committee rebalances the Underlying Index semi-annually to avoid excessive turnover and reviews the Underlying Index for deletions on a weekly basis. At the weekly review, additions may be needed to maintain 100 constituents and the Underlying Index Committee re-weights constituents to maintain the 2% Loan Cap. The Underlying Index Committee, nevertheless, reserves the right to make adjustments to the Underlying Index at any time that it believes appropriate.

### **S-Network Composite Closed-End Fund Index<sup>SM</sup> (PowerShares CEF Income Composite Portfolio)**

For PowerShares CEF Income Composite Portfolio, the Index Provider reconstitutes and rebalances the Underlying Index quarterly. The number of constituents comprising the Underlying Index varies based on the number of closed-end funds that meet the Underlying Index's eligibility criteria at each quarterly rebalancing. The Index Provider selects constituents of the Underlying Index from a universe of approximately 350 closed-end funds that:

- (i) are organized under the laws of the United States and are in compliance with all applicable laws and regulations applicable to closed-end funds;
- (ii) have a stated investment objective of concentrating in the taxable fixed-income, high yield fixed-income or option income sector;
- (iii) trade on a recognized North American stock exchange that provides a "last closing price;"
- (iv) have a minimum capitalization value greater than \$100 million; and
- (v) have an average daily turnover of more than \$500,000 per day for the three months prior to the snapshot date.

A constituent in the Underlying Index also must maintain a total expense ratio below a certain threshold, which will vary depending upon prevailing interest rates. The reference threshold is 2% and is based on the 30-day LIBOR rate of 0.25%. The threshold will increase or decrease from this level by a factor of 30% of the difference between the reference LIBOR rate of 0.25% and the LIBOR rate on the record date. Once included in the Underlying Index, a closed-end fund may exceed the eligibility threshold by up to 25% of the eligibility threshold. The Index Provider will delete any current constituent from the Underlying Index that exceeds the eligibility threshold by more than 25%.

The Index Provider weights Underlying Index constituents based on their net assets, adjusted for their average share price discount and modified to ensure compliance with the diversification requirements of Subchapter M of the Internal Revenue Code of 1986, as amended (the "Internal Revenue Code"). The Index Provider will exclude from the Underlying Index closed-end funds whose shares have traded at average premiums of 20% (plus or minus the average premium/discount for all eligible constituents) or more to their NAVs for the 10 business days prior to the last

business day of the rebalancing month and closed-end funds whose market capitalization falls below \$75 million on the snapshot date.

Underlying Index values are calculated each trading day and are distributed over the New York Stock Exchange Global Index Feed between the hours of approximately 9:30 a.m. and 4:15 p.m., Eastern Time, under the symbol "CEFC." Underlying Index values are disseminated every 15 seconds.

Rebalancing data, including constituent weights and related information, is posted on the Underlying Index's website ([www.closedendfundindex.com](http://www.closedendfundindex.com)) prior to the open on the next business day following the rebalancing date. The Index Provider will issue a press announcement identifying additions and deletions to the Underlying Index no later than the Monday following the third Friday of the rebalancing month. Share weights of the constituents remain constant between quarters, except in the event of certain types of corporate actions, including stock splits and reverse stock splits. Share weights of the Underlying Index are not adjusted between rebalancing dates for shares issued or shares repurchased. Valuation data regarding the Underlying Index is available via Bloomberg, L.P.

### **Wells Fargo® Hybrid and Preferred Securities Floating and Variable Rate Index (PowerShares Variable Rate Preferred Portfolio)**

The Underlying Index is designed to track the performance of certain preferred stock and other hybrid securities that, in the Index Provider's judgment, are functionally equivalent to preferred stock, that meet certain criteria. Securities eligible for inclusion in the Underlying Index may be issued by either U.S.-based or foreign issuers and must:

- (i) maintain a minimum par value of \$100 million outstanding or a minimum of 10 million shares outstanding;
- (ii) have floating or variable dividends or coupons;
- (iii) be U.S.-dollar denominated; and
- (iv) be U.S. registered (or otherwise exempt from registration under Section 3(a)(2) of the Securities Act of 1933, as amended (the "Securities Act")).

In addition, securities that constitute 75% of the Underlying Index must have a minimum monthly trading volume of at least 250,000 trading units or a minimum notional volume traded per month of \$25 million. The Underlying Index excludes auction rate securities, contingent capital securities, securities subject to sinking fund provisions, shares in closed-end funds, municipal securities, tender option bonds or repackaged securities linked to a security, a basket of securities or an index. The Underlying Index also excludes securities issued by a special purpose vehicle, such as a collateralized mortgage obligation, a collateralized debt obligation or a collateralized loan obligation.

The Underlying Index is calculated by NYSE Group, with whom the Index Provider has contracted, using a market capitalization-weighted methodology based on a pool of Preferred Securities identified by the Index Provider in accordance with the terms of its methodology. No more than 45% of the total weight of the Underlying Index can be comprised of the sum of issuers whose

individual weighting in the pool exceeds 4.5%. If the 45% cap is breached, all the issuers are ranked in descending order of their weights and the first security to breach the 45% limit will have its weight reduced either until the rule is satisfied or the weight of that issuer relative to the pool reaches 4.5%. If that issuer has multiple component securities included in the Underlying Index, its securities will be reduced on a pro-rata basis determined by market capitalization. Further, this issuer's excess weight is proportionally redistributed to all issuers with weights below 4.5%. This process will be repeated until the 45% rule is satisfied. (The 4.5% weight limit above applies to issuers, not constituent securities. A constituent security may represent more than 4.5% of the Underlying Index.)

The Underlying Index is rebalanced at the close of the last trading day each month on NYSE Arca. All outstanding Preferred Securities are tested for suitability based on eligibility criteria. Securities that become ineligible are not removed until a rebalancing date except in the case of material events. Rebalancing also can occur at other times, following specific material events, such as forced redemption, tenders, calls, conversions, green-shoes, overallocments, re-openings, rights offerings, stock splits or mergers, and suspension from trading on an exchange. The Index Provider may, but is not required to, remove a constituent security from the Underlying Index upon the occurrence of other material events, including in the event that an issuer has become subject to, or is reasonably likely to become subject to, a bankruptcy, conservatorship or similar event or proceeding or an event has occurred that is reasonably likely to adversely impact the tax treatment to a U.S. taxpayer holder that is invested in an instrument linked to the Underlying Index or an event has occurred that materially adversely affects the ability of NYSE Arca to value the security.

### **Principal Risks of Investing in the Funds**

The following provides additional information about certain of the principal risks identified under "Principal Risks of Investing in the Fund" in each Fund's "Summary Information" section.

#### **Build America Bonds Risk.**

Build America Bonds are taxable municipal obligations issued pursuant to the Act or other legislation providing for the issuance of taxable municipal debt on which the issuer receives federal support. Enacted in February 2009, the Act authorizes state and local governments to issue taxable bonds on which, assuming certain specified conditions are satisfied, issuers may either (i) receive reimbursement from the U.S. Treasury with respect to its interest payments on the bonds ("direct pay" Build America Bonds) or (ii) provide tax credits to investors in the bonds ("tax credit" Build America Bonds). Unlike most other municipal obligations, interest received on Build America Bonds is subject to federal income tax and may be subject to state income tax. Under the terms of the Act, issuers of direct pay Build America Bonds are entitled to receive reimbursement from the U.S. Treasury currently equal to 35% (or 45% in the case of Recovery Zone Economic Development Bonds) of the interest paid. Holders of tax credit Build America Bonds can receive a federal tax credit currently equal to 35% of the coupon interest received.

The federal interest subsidy or tax credit continues for the life of the bonds. Build America Bonds are an alternative form of financing to state and local governments whose primary means for accessing the capital markets has been through issuance of tax free municipal bonds. Pursuant to the terms of the Act, the issuance of Build America Bonds ceased on December 31, 2010. As a result, the availability of such bonds is limited and there can be no assurance that Build America Bonds will be actively traded. The market for the bonds and/or their liquidity may be negatively affected. No further issuance is permitted unless Congress were to renew the program at a future date.

Build America Bonds involve similar risks as municipal bonds, including credit and market risk. In particular, should a Build America Bond's issuer fail to continue to meet the applicable requirements imposed on the bonds as provided by the Act, it is possible that such issuer may not receive federal cash subsidy payments, impairing the issuer's ability to make scheduled interest payments. Although Build America Bonds only were authorized for 2009 and 2010, the program may result in reduced issuance of tax-exempt municipal bonds.

### **California Municipal Securities Risk**

Because PowerShares California AMT-Free Municipal Bond Portfolio invests a substantial portion of its assets in California municipal securities, the Fund will have greater exposure to negative political, economic and statutory factors within the State of California than certain funds that invest in a broader base of securities. Unfavorable developments in any economic sector may have a substantial impact on the overall California municipal market. Provisions of the California Constitution and state statutes that limit the taxing and spending authority of California governmental entities may impair the ability of California issuers to pay principal and/or interest on their obligations.

The California economy continues to benefit from broad-based growth, and in recent years, the State has paid off billions of dollars of budgetary borrowings, debts and deferrals which were accumulated in order to balance budgets in prior years.

Despite the recent significant budgetary improvements, there remain a number of risks that threaten the State's fiscal condition, including the significant unfunded liabilities of the State's two main retirement systems. In recent years, California has committed to significant increases in annual payments to these systems to reduce the unfunded liabilities, and California also has significant unfunded liability with respect to other post-employment benefits. While California's economy is broad, it does have major concentrations in high technology, trade, entertainment, manufacturing, government, tourism, construction and services, and may be sensitive to economic problems affecting those industries. Future California political and economic developments, constitutional amendments, legislative measures, executive orders, administrative regulations, litigation and voter initiatives could have an adverse effect on the debt obligations of California issuers.

### **Call Risk**

If interest rates fall, it is possible that issuers of callable securities with high interest coupons will "call" (or prepay) their bonds before their maturity date. If an issuer exercised such a call during a period of declining interest rates, certain funds may have to replace such called security with a lower yielding security. If that were to happen, certain funds' net investment income could fall.

### **Capital Controls Risk**

For PowerShares Chinese Yuan Dim Sum Bond Portfolio, adverse economic conditions, such as unfavorable or volatile currency exchange rates and interest rates, political events or other conditions may cause the Chinese government to intervene and impose "capital controls." Capital controls include the prohibition of, or restrictions on, the ability to transfer currency, securities or other assets. In addition, this intervention may lead to levies placed on profits repatriated by foreign entities (such as the Fund). The Chinese government's imposition of capital controls can impact the ability of the Fund to buy, sell or otherwise transfer securities or currency, may adversely affect the trading market and price for shares of the Fund, and may cause the Fund to decline in value.

### **Cash Transaction Risk**

Unlike most ETFs, certain funds effect creations and redemptions principally for cash, rather than principally in-kind because of the nature of each Fund's investments. ETFs generally are able to make in-kind redemptions and avoid being taxed on gain on the distributed portfolio securities at the Fund level. Because these Funds currently intend to effect redemptions principally for cash, rather than principally for in-kind securities, they may be required to sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds. Certain funds may recognize a capital gain on these sales that might not have been incurred if the Fund had made a redemption in-kind, and this may decrease the tax efficiency of the Fund compared to ETFs that utilize an in-kind redemption process.

### **Changing Fixed-Income Market Conditions**

Each Fund (except for PowerShares CEF Income Composite Portfolio and PowerShares Variable Rate Preferred Portfolio) invests in fixed-income securities, which are subject to interest rate risk. The current historically low interest rate environment was created in part by the FRB and certain foreign central banks keeping the federal funds and equivalent foreign rates at or near zero. The "tapering" in 2015 of the FRB's quantitative easing program, combined with the FRB's recent raising of the target range for the Federal Funds Rate (and likely eventual increase in equivalent foreign rates) may expose fixed-income markets to heightened volatility and reduced liquidity for certain fixed-income investments, particularly those with longer maturities, although it is difficult to predict the impact of this rate increase and any future rate increases on various markets. In addition, decreases in fixed-income dealer market-making capacity may persist in the future, potentially leading to heightened volatility and reduced liquidity in the fixed-income markets. As a result, the value of the Fund's investments and share price may decline. In addition, because of changing central bank policies, the Fund may experience higher

than normal shareholder redemptions, which could potentially increase portfolio turnover rate and the Fund's transaction costs and potentially lower the Fund's returns.

### **Commodity Pool Risk**

Because of the types of investments in the Underlying Funds in which PowerShares CEF Income Composite Portfolio invests, the Fund's investments may cause it to be deemed to be a commodity pool, thereby subjecting the Fund to regulation under the Commodity Exchange Act and Commodity Futures Trading Commission ("CFTC") rules. The Adviser already is registered as a commodity pool operator ("CPO"), and the Fund will be operated in accordance with CFTC rules. Registration as a commodity pool may have a negative impact on the ability of the Fund to engage in its planned investment program. Moreover, registration as a CPO subjects the adviser to additional laws, regulations and enforcement policies, all of which could increase compliance costs and may affect the operations and financial performance of funds whose adviser is required to register as a CPO.

The CFTC has adopted rules regarding the disclosure, reporting and recordkeeping requirements that apply with respect to the Fund as a result of the Adviser's registration as a CPO. Generally, these rules allow for substituted compliance with CFTC disclosure and shareholder reporting requirements, based on the Adviser's compliance with comparable SEC requirements. This means that for most of the CFTC's disclosure and shareholder reporting requirements applicable to the Adviser as the Fund's CPO, the Fund's compliance with SEC disclosure and shareholder reporting requirements will be deemed to fulfill the Adviser's CFTC compliance obligations. As a result of CFTC regulations, the Fund's status as a commodity pool and the Adviser's registration as a CPO are not expected to materially adversely affect the Fund's ability to achieve its investment objective.

### **Convertible Securities Risk**

A convertible security generally is a preferred stock that may be converted within a specified period of time into common stock. Convertible securities nevertheless remain subject to the risks of both debt securities and equity securities. As with other equity securities, the value of a convertible security tends to increase as the price of the underlying stock goes up, and to decrease as the price of the underlying stock goes down. Declining common stock values therefore also may cause the value of the Fund's investments to decline. Like a debt security, a convertible security provides a fixed income stream and also tends to decrease in value when interest rates rise. Moreover, many convertible securities have credit ratings that are below investment grade and are subject to the same risks as lower-rated debt securities.

### **Currency Risk**

Because the NAV of certain funds is determined in U.S. dollars, each Fund's NAV could decline if the currency of the non-U.S. market in which the Fund invests depreciates against the U.S. dollar, even if the value of the Fund's holdings, measured in the foreign currency, increases. Generally, an increase in the value of the U.S. dollar against a foreign currency will reduce the value of a security denominated in that foreign currency, thereby decreasing certain funds' overall NAV. In addition, fluctuations in the

exchange values of currencies could affect the economy or particular business operations of companies in a geographic region in which certain funds invest, causing an adverse impact on such Fund. As a result, investors have the potential for losses regardless of the length of time they intend to hold Shares.

Much of the income that certain funds receive will be in foreign currencies. However, the Funds will compute and distribute their income in U.S. dollars, and the computation of income will be made on the date that each Fund earns the income at the foreign exchange rates in effect on that date. Therefore, if the values of the relevant foreign currencies fall relative to the U.S. dollar between the earning of the income and the time at which the Funds convert the foreign currencies to U.S. dollars, the Funds may be required to liquidate securities in order to make distributions if the Funds have insufficient cash in U.S. dollars to meet distribution requirements. Furthermore, the Funds may incur costs in connection with conversions between U.S. dollars and foreign currencies. Foreign exchange dealers realize a profit based on the difference between the prices at which they are buying and selling various currencies. Thus, a dealer normally will offer to sell a foreign currency to the Funds at one rate, while offering a lesser rate of exchange should the Funds desire immediately to resell that currency to the dealer. The Funds will conduct their foreign currency exchange transactions either on a spot (i.e., cash) basis at the spot rate prevailing in the foreign currency exchange market, or through entering into forward, futures or options contracts to purchase or sell foreign currencies.

PowerShares Chinese Yuan Dim Sum Bond Portfolio invests at least 80% of its assets in Chinese RMB-denominated bonds issued and settled outside of mainland China. The RMB currently is not a freely convertible currency. The government of China maintains strict currency controls. As a result, the value of the RMB, and the value of securities designed to provide exposure to the RMB, such as RMB-denominated bonds issued by offshore issuers, can change quickly. These and other factors could have a negative impact on the Fund's performance and increase the volatility of an investment in the Fund. The Chinese government's policies on currency, control and repatriation restrictions are subject to change, and the Fund's or the shareholders' position may be adversely affected. In addition, if the Chinese currencies, the RMB, which is traded in mainland China, and the Yuan, which is traded offshore (traded as "CNH" in Hong Kong), diverge in value, that divergence could negatively impact the Fund.

### **Emerging Markets Sovereign Debt Risk**

Investments in emerging markets sovereign debt carry a number of risks. Government obligors in emerging market countries are among the world's largest debtors to commercial banks, other governments, international financial organizations and other financial institutions. Historically, certain issuers of the government debt securities in which certain funds may invest have experienced substantial difficulties in meeting their external debt obligations, resulting in defaults on certain obligations and the restructuring of certain indebtedness. Such restructuring arrangements have included obtaining additional credit to finance outstanding obligations and the reduction and rescheduling of payments of interest and principal through the negotiation of new or amended credit agreements. As a holder of government debt

securities, certain funds may be asked to participate in the restructuring of such obligations and to extend further loans to their issuers. There can be no assurance that the securities in which certain funds will invest will not be subject to restructuring arrangements or to requests for additional credit. In addition, certain participants in the secondary market for such debt may be directly involved in negotiating the terms of these arrangements and may therefore have access to information not available to other market participants.

### ***Financial Institutions Risk***

Investments in financial institutions may be subject to certain risks, including, but not limited to, the risk of regulatory actions, changes in interest rates and concentration of loan portfolios in an industry or sector. Financial institutions are highly regulated and may suffer setbacks should regulatory rules and interpretations under which they operate change. Likewise, there is a high level of competition among financial institutions, which could adversely affect the viability of an institution. In addition, certain financial institutions are undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to their regulatory framework. The deterioration of the credit markets in recent years has caused an adverse impact on a broad range of financial markets, including mortgage, asset-backed, auction rate and other markets, thereby causing certain financial institutions to incur large losses. Certain financial institutions have experienced declines in the valuation of their assets and have even ceased operations.

### ***Fixed Income Securities Risk***

Each Fund (except for PowerShares CEF Income Composite Portfolio and PowerShares Variable Rate Preferred Portfolio) invests in fixed-income securities, which are subject to interest rate risk and credit risk. Interest rate risk refers to fluctuations in the value of a fixed-income security resulting from changes in the general level of interest rates. When the general level of interest rates goes up, the prices of most fixed-income securities go down. When the general level of interest rates goes down, the prices of most fixed-income securities go up. Fixed-income securities with longer maturities typically are more sensitive to changes in interest rates, making them more volatile than securities with shorter maturities. Credit risk refers to the possibility that the issuer of a security will be unable and/or unwilling to make timely interest payments and/or repay the principal on its debt. Debt instruments are subject to varying degrees of credit risk, which may be reflected in credit ratings. There is a possibility that the credit rating of a fixed-income security may be downgraded after purchase, which may adversely affect the value of the security. Securities issued by the U.S. Government are subject to limited credit risk; however, securities issued by U.S. Government agencies are not necessarily backed by the full faith and credit of the U.S. Government. Due to recent events in the fixed-income markets, including the potential impact of the Federal Reserve Board tapering its quantitative easing program, certain funds may be subject to heightened interest rate risk as a result of a rise in interest rates. In addition, certain funds are subject to the risk that interest rates may exhibit increased volatility, which could cause the Fund's net asset value to fluctuate more. A decrease in fixed-income market maker

capacity may act to decrease liquidity in the fixed-income markets and act to further increase volatility, affecting certain funds' returns.

### ***Foreign Investment Risk***

Investments in non-U.S. issuers may involve unique risks compared to investing in securities of U.S. issuers, including, among others, greater market volatility, the availability of less reliable financial information, higher transactional costs, taxation by foreign governments, decreased market liquidity and political instability. Foreign issuers are often subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are U.S. securities, and therefore, not all material information regarding these issuers will be available. Securities exchanges or foreign governments may adopt rules or regulations that may negatively impact certain funds' ability to invest in foreign securities or may prevent certain funds from repatriating its investments. In addition, certain funds may not receive shareholder communications or be permitted to vote the securities that it holds, as the issuers may be under no legal obligation to distribute them. In addition, the underlying issuers of certain depositary receipts, particularly unsponsored or unregistered depositary receipts, are under no obligation to distribute shareholder communications to the holders of such receipts, or to pass through to them any voting rights with respect to the deposited securities.

### ***Fund of Funds Risk***

Because PowerShares CEF Income Composite Portfolio is a fund of funds, its investment performance largely depends on the investment performance of the Underlying Funds in which it invests. An investment in the Fund is subject to the risks associated with the Underlying Funds that comprise the Underlying Index. The Fund will pay indirectly a proportional share of the fees and expenses of the Underlying Funds in which it invests, including their investment advisory and administration fees, while continuing to pay its own unitary management fee. As a result, shareholders will absorb duplicate levels of fees with respect to investments in the Underlying Funds. In addition, at times certain segments of the market represented by constituent Underlying Funds in the Underlying Index may be out of favor and underperform other segments.

### ***Geographic Concentration Risk***

Certain Funds may invest a significant portion of their total assets in securities of issuers from a specific country or geographic region. To the extent that certain funds are less diversified across geographic regions or countries, it will face greater risks. The economies and financial markets of certain regions, including western Europe, can be interdependent and may all decline at the same time. A natural or other disaster could occur in a country or geographic region in which certain funds invest, which could affect the economy or particular business operations of companies in that country or geographic region and adversely impact certain funds' investments in the affected country or region. To the extent that certain funds are more concentrated in a specific country or geographic region, these risks may be greater.

### **Global Bonds Risk**

Certain funds invest in global bonds. Global bonds are subject to the same risks as other debt issues, notably credit risk, market risk, interest rate risk and liquidity risk. Generally, investments in the securities of non-U.S. issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional costs, taxation by foreign governments, decreased market liquidity and political instability. Foreign issuers often are subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are U.S. securities and, therefore, not all material information regarding these issuers will be available. Securities exchanges or foreign governments may adopt rules or regulations that may negatively impact certain funds' abilities to invest in foreign securities or may prevent the Fund from repatriating its investments. In addition, certain funds may not receive shareholder communications or be permitted to vote the securities that it holds, as the issuers may be under no legal obligation to distribute them.

### **Hybrid Securities Risk**

Although generally considered an equity security within an issuer's capital structure, a hybrid security may exhibit characteristics to a debt security, convertible security, or other evidence of indebtedness on which the value of the interest, or principal of which, is determined by reference to changes in the value of a reference instrument or financial strength of a reference entity (e.g., a security or other financial instrument, asset, currency or interest rate). Hybrid securities are functionally equivalent to preferred stock and are issued and trade in a manner similar to traditional perpetual preferred stock. Such hybrid securities generally have a lower par amount, may allow the issuer to defer interest or dividend payments and are equal to preferred shares or the lowest level of subordinated debt in terms of claims to an issuer's assets in the event of liquidation. Also, the price of a hybrid security and any applicable reference instrument may not move in the same direction or at the same time.

An investment in a hybrid security may entail significant risks not associated with a similar investment in a traditional equity security or preferred stock. The risks of a particular hybrid security will depend upon the terms of the instrument, but may include the possibility of significant changes in the value of any applicable reference instrument. Such risks may depend upon factors unrelated to the operations or credit quality of the issuer of the hybrid security. Hybrid securities potentially are more volatile and carry greater market and liquidity risks than traditional equity securities. Holders of hybrid preferred securities have limited voting rights to control the activities of the issuer. The purchase of hybrid preferred securities also may expose certain funds to the credit risk of their issuer, and, depending on the level of the Fund's investment in such hybrid securities, these risks may cause significant fluctuations in the Fund's NAV. Hybrid securities also may carry liquidity risk, since the instruments are often "customized" to meet the needs of an issuer or a particular investor, and therefore the number of investors that are willing and able to buy such instruments in the secondary market may be small.

### **Index Risk**

Unlike many investment companies that are "actively managed," the Funds are "passive" investors and therefore do not utilize investing strategies that seek returns in excess of their respective Underlying Index. Therefore, certain funds would not necessarily buy or sell a security unless that security is added or removed, respectively, from its respective Underlying Index, even if that stock generally is underperforming. If a specific security is removed from an Underlying Index, certain funds may be forced to sell such security at an inopportune time or for a price lower than the security's current market value. An Underlying Index may not contain the appropriate mix of securities for any particular economic cycle. Unlike with an actively managed fund, the Adviser does not use techniques or defensive strategies designed to lessen the impact of periods of market volatility or market decline. This means that, based on certain market and economic conditions, certain funds' performance could be lower than other types of mutual funds that actively manage their portfolio assets to take advantage of market opportunities.

### **Industry Concentration Risk**

In following its methodology, certain funds' Underlying Indexes from time to time may be concentrated to a significant degree in securities of issuers located in a single industry or sector. To the extent that an Underlying Index concentrates in the securities of issuers in a particular industry or sector, certain funds will also concentrate its investments to approximately the same extent. By concentrating its investments in an industry or group of industries, certain funds face more risks than if it were diversified broadly over numerous industries or sectors. Such industry-based risks, any of which may adversely affect the companies in which certain funds invest, may include, but are not limited to, the following: general economic conditions or cyclical market patterns that could negatively affect supply and demand in a particular industry; competition for resources, adverse labor relations, political or world events; obsolescence of technologies; and increased competition or new product introductions that may affect the profitability or viability of companies in an industry. In addition, at times, such industry or sector may be out of favor and underperform other industries or the market as a whole. Information about the Funds' exposure to a particular industry is available in the Funds' Annual and Semi-Annual Reports to Shareholders, as well as on their Forms N-Q as filed with the SEC.

### **Interest Rate and Call Risk**

Interest rate risk refers to fluctuations in the value of a security resulting from changes in the general level of interest rates. When the general level of interest rates goes up, the prices of preferred securities may go down, causing certain funds' assets will decline. The current historically low interest rate environment increases the risk associated with rising interest rates.

### **Issuer-Specific Changes**

The performance of certain funds depend on the performance of individual securities to which certain funds have exposure. The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform worse than the market as a whole. Poor performance in such securities may be caused by management decisions, competitive pressures,

changes in technology, expiration of patent protection, disruptions in supply, labor problems or shortages, corporate restructurings, fraudulent disclosures or other factors. Issuers of securities within the Underlying Index may, in times of distress or at their own discretion, decide to reduce or eliminate dividends, which may also cause their stock prices to decline.

### **Liquidity Risk**

Liquidity risk exists when a particular investment is difficult to purchase or sell. If certain funds invest in illiquid securities or current portfolio securities become illiquid, it may reduce the returns of the Fund because the Fund may be unable to sell the illiquid securities at an advantageous time or price. In the event that certain funds voluntarily or involuntarily liquidates portfolio assets during periods of infrequent trading, it may not receive full value for those assets.

### **Market Risk**

The securities in each Underlying Index are subject to market fluctuations, and certain funds could lose money due to short-term market movements and over longer periods during market downturns. You should anticipate that the value of the Shares will decline, more or less, in correlation with any decline in value of the securities in the respective Underlying Index. The value of a security may decline due to general market conditions, economic trends or events that are not specifically related to the issuer of the security or due to factors that affect a particular industry or group of industries. During a general downturn in the securities markets, multiple asset classes may be negatively affected.

### **Market Trading Risk**

The Funds face numerous market trading risks, including the potential lack of an active market for the Shares, losses from trading in secondary markets, and disruption in the creation/redemption process of certain funds. Any of these factors may lead to the Shares trading at a premium or discount to certain funds' NAV.

### **Municipal Insurance Risk**

A portion of the municipal securities held by PowerShares California AMT-Free Municipal Bond Portfolio, PowerShares National AMT-Free Municipal Bond Portfolio, PowerShares New York AMT-Free Municipal Bond Portfolio and PowerShares VRDO Tax-Free Weekly Portfolio may be covered by insurance that guarantees the bond's scheduled payment of interest and repayment of principal. This type of insurance may be obtained by either (i) the issuer at the time the bond is issued (primary market insurance) or (ii) another party after the bond has been issued (secondary market insurance). Both primary and secondary market insurance guarantee timely and scheduled repayment of all principal and payment of all interest on a municipal security in the event of default by the issuer, and cover a municipal security to its maturity, enhancing its credit quality and value.

Municipal security insurance does not insure against market fluctuations or fluctuations in the Fund's share price. In addition, a municipal security insurance policy will not cover: (i) repayment of a municipal security before maturity (redemption), (ii) prepayment or payment of an acceleration premium (except for a mandatory

sinking fund redemption) or any other provision of a bond indenture that advances the maturity of the bond or (iii) nonpayment of principal or interest caused by negligence or bankruptcy of the paying agent. A mandatory sinking fund redemption may be a provision of a municipal security issue, whereby part of the municipal security issue may be retired before maturity.

Because a significant portion of the municipal securities issued and outstanding is insured by a small number of insurance companies, an event involving one or more of these insurance companies could have a significant adverse effect on the value of the securities insured by that insurance company and on the municipal markets as a whole.

### **Municipal Securities Risk**

PowerShares Build America Bond Portfolio, PowerShares California AMT-Free Municipal Bond Portfolio, PowerShares National AMT-Free Municipal Bond Portfolio, PowerShares New York AMT-Free Municipal Bond Portfolio and PowerShares VRDO Tax-Free Weekly Portfolio invest in municipal securities. Municipal securities are subject to the risk that litigation, legislation or other political events, local business or economic conditions or the bankruptcy of the issuer could have a significant effect on an issuer's ability to make payments of principal and/or interest. In addition, there is a risk that, as a result of the recent economic crisis, the ability of any issuer to pay, when due, the principal or interest on its municipal bonds may be materially affected.

Political changes and uncertainties in the municipal market related to taxation, legislative changes or the rights of municipal security holders can significantly affect municipal securities. Because many securities are issued to finance similar projects, especially those relating to education, health care, transportation and utilities, conditions in those sectors can affect the overall municipal market. In addition, changes in the financial condition of an individual municipal issuer can affect the overall municipal market.

Municipal securities backed by current or anticipated revenues from a specific project or specific assets can be negatively affected by the discontinuance of the taxation supporting the project or assets or the inability to collect revenues for the project or from the assets. If the IRS determines that an issuer of a municipal security has not complied with applicable tax requirements, interest from the security could become taxable and the security could decline significantly in value.

The market for municipal bonds may be less liquid than for taxable bonds. There also may be less information available on the financial condition of issuers of municipal securities than for public corporations. This means that it may be harder to buy and sell municipal securities, especially on short notice, and municipal securities may be more difficult for the Funds to value accurately than securities of public corporations. Since these Funds invest a significant portion of their portfolios in municipal securities, the Funds' portfolios may have greater exposure to liquidity risk than funds that invest in non-municipal securities.

### ***New York Municipal Securities Risk***

Because PowerShares New York AMT-Free Municipal Bond Portfolio invests a substantial portion of its assets in New York municipal securities, the Fund will have greater exposure to negative political, economic, regulatory or other factors within the State of New York, including the financial condition of its public authorities and political subdivisions, than certain funds that invest in a broader base of securities. Unfavorable developments in any economic sector may have a substantial impact on the overall New York municipal market. Certain issuers of New York municipal bonds have experienced serious financial difficulties in the past and reoccurrence of these difficulties may impair the ability of certain New York issuers to pay principal or interest on their obligations. The financial health of New York City affects that of the state, and when New York City experiences financial difficulty, it may have an adverse effect on New York municipal bonds the Fund holds. The growth rate of New York has at times been somewhat slower than the nation overall. Various financial, social, economic and political factors, including the outcome of pending litigation including the state or its localities, also may affect the economic and financial condition of New York.

### ***Non-Correlation Risk***

Certain funds' returns may not match the return of its Underlying Index (that is, it may experience tracking error) for a number of reasons. For example, certain funds incur operating expenses not applicable to its Underlying Index and also incurs costs in buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of its Underlying Index. To the extent that certain funds have just commenced operations and/or has a relatively small amount of assets, those transaction costs could have a proportionally greater impact on that Fund. Additionally, if certain funds use a sampling approach, such sampling may result in returns that are not as well-correlated with the returns of its respective Underlying Index as would be the case if such Fund purchased all of the securities in its Underlying Index in the proportions represented in the Underlying Index.

The performance of certain funds and its Underlying Index may vary due to asset valuation differences and differences between the Fund's portfolio and its Underlying Index resulting from legal restrictions, cost or liquidity constraints. Certain funds may fair value certain of the securities it holds. To the extent certain funds calculate its NAV based on fair value prices, the Fund's ability to track its Underlying Index may be adversely affected. Since an Underlying Index is not subject to the tax diversification requirements to which the Funds must adhere, certain funds may be required to deviate its investments from the securities contained in, and relative weightings of, its Underlying Index. Certain funds may not invest in certain securities included in its Underlying Index due to liquidity constraints. Liquidity constraints also may delay certain funds' purchase or sale of securities included in its Underlying Index. For tax efficiency purposes, certain funds may sell certain securities to realize losses, causing it to deviate from its respective Underlying Index.

The investment activities of one or more of the Adviser's affiliates, including other subsidiaries of the Adviser's parent company,

Invesco Ltd., for their proprietary accounts and for client accounts also may adversely impact certain funds' ability to track its Underlying Index. For example, in regulated industries, certain emerging or international markets and corporate and regulatory ownership definitions, there may be limits on the aggregate amount of investment by affiliated investors that may not be exceeded, or that may not be exceeded without the grant of a license or other regulatory or corporate consent, or, if exceeded, may cause the Adviser, the Fund or other client accounts to suffer disadvantages or business restrictions. As a result, certain funds may be restricted in its ability to acquire particular securities due to positions held by the Adviser's affiliates.

The Adviser may not fully invest certain funds at times, either as a result of cash flows into the Fund or the need to reserve cash the Fund holds to meet redemptions and expenses, or low assets (particularly when certain funds are new and have operated for only a short period). If certain funds utilize a sampling approach, or futures or other derivative positions, its return may not correlate as well with the return of the respective Underlying Index as would be the case if the Fund purchased all of the securities in its Underlying Index with the same weightings as its Underlying Index.

### ***Non-Diversified Fund Risk***

Because certain funds are considered non-diversified and can invest a greater portion of its assets in securities of individual issuers than can a diversified fund, changes in the market value of a single investment could cause greater fluctuations in Share price of those Funds than would occur in a diversified fund. This may increase the Funds' volatility and cause the performance of a relatively small number of issuers to have a greater impact on certain funds' performance.

### ***Non-Investment Grade Securities Risk***

Non-investment grade securities risk is a form of credit risk. Securities that are non-investment grade, commonly known as "junk bonds," are regarded as having predominantly speculative characteristics with respect to the capacity to pay interest and repay principal. Non-investment grade securities may be more susceptible to real or perceived adverse economic and competitive industry conditions than higher grade securities. The prices of non-investment grade securities have been found to be less sensitive to interest rate changes than more highly rated investments, but more sensitive to adverse economic downturns or individual corporate developments. Yields on non-investment grade securities will fluctuate. If the issuer of non-investment grade securities defaults, certain funds may incur additional expenses to seek recovery. The secondary markets in which non-investment grade securities are traded may be less liquid than the market for higher grade securities. Less liquidity in the secondary trading markets could adversely affect the price at which the Funds could sell a particular non-investment grade security when necessary to meet liquidity needs or in response to a specific economic event, such as a deterioration in the creditworthiness of the issuer, and could adversely affect and cause large fluctuations in the NAV of certain funds' Shares. Adverse publicity and investor perceptions may decrease the values and liquidity of non-investment grade securities.

### **Offshore Investor Risk**

For PowerShares Chinese Yuan Dim Sum Bond Portfolio, there are special risks associated with investing in securities designed to provide exposure to Chinese RMB, such as RMB-denominated bonds in which the Fund will invest. The Chinese government maintains strict currency controls and regularly intervenes in the currency market. The Chinese government's actions may not be transparent or predictable. As a result, the value of the RMB, and the value of RMB-denominated securities, may change quickly and arbitrarily. These limitations and restrictions may impact the availability, liquidity, and pricing of securities designed to provide offshore investors with exposure to Chinese markets. As a result, returns achieved by offshore investors, such as the Fund, could differ from those available to domestic investors in China.

### **Portfolio Turnover Risk**

To the extent that certain funds' Underlying Indexes rebalance frequently, certain funds may engage in frequent trading of its portfolio securities in connection with the rebalancing or adjustment of its Underlying Index. This may result in a high portfolio turnover rate. A portfolio turnover rate of 200%, for example, is equivalent to a Fund buying and selling all of its securities two times during the course of a year. A high portfolio turnover rate (such as 100% or more) could result in high brokerage costs for certain funds. A high portfolio turnover rate also can result in an increase in taxable capital gains distributions to certain funds' shareholders and an increased likelihood that the capital gains will be taxable at ordinary rates.

### **Preferred Stock Risk**

Preferred stock is subject to issuer-specific and overall market risks that are generally applicable to equity securities as a whole; however, there are special risks associated with investing in preferred stock. Preferred stock may be less liquid than many other types of securities, such as common stock, and generally provides no voting rights with respect to the issuer. Preferred stock also may be subordinated to bonds or other debt instruments in an issuer's capital structure, meaning that an issuer's preferred stock generally pays dividends only after the issuer makes required payments to holders of its bonds and other debt. This subjects preferred stock to a greater risk of non-payment than more senior securities. Because of the subordinated position of preferred stock in an issuer's capital structure, the ability to defer dividend or interest payments for extended periods of time without triggering an event of default for the issuer, and certain other features, its quality and value are heavily dependent on the profitability and cash flows of the issuer rather than on any legal claims to specific assets. Also, in certain circumstances, an issuer of a preferred stock may call or redeem it prior to a specified date or may convert it to common stock, all of which may negatively impact its return.

Preferred stock may include provisions that permit the issuer, in its discretion, to defer or omit distributions for a certain period of time. If certain funds own a security that is deferring or omitting its distributions, the Fund may be required to report the distribution on its tax returns, even though it may not have received this income. Dividend payments on a preferred security typically must be declared by the issuer's board of directors, unlike interest

payments on debt securities. However, an issuer's board of directors generally is not under any obligation to declare a dividend for an issuer (even if such dividends have accrued). If an issuer of preferred securities experiences economic difficulties, those securities may lose substantial value due to the reduced likelihood that the issuer's board of directors will declare a dividend.

### **Prepayment Risk**

The ability of the borrower of a loan to repay principal prior to maturity can limit the potential for gains by PowerShares Senior Loan Portfolio. During periods of declining interest rates, the borrower of a loan may exercise its option to prepay principal earlier than scheduled, forcing the Underlying Index, and therefore the Fund, to replace such a loan with a lower-yielding loan. If interest rates are falling, the Fund may have to reinvest the unanticipated proceeds at lower interest rates, resulting in a decline in the Fund's income.

### **Puerto Rican Municipal Securities Risk**

Adverse market, political, economic or other conditions or developments within Puerto Rico may negatively affect the value of holdings in Puerto Rican municipal obligations by PowerShares California AMT-Free Municipal Bond Portfolio, PowerShares National AMT-Free Municipal Bond Portfolio and PowerShares New York AMT-Free Municipal Bond Portfolio. The Puerto Rican economy is reliant on manufacturing, services and tourism and its economy and financial operations parallel the economic cycles of the United States. Current economic difficulties in the United States are likely to have an adverse impact on the overall economy of Puerto Rico.

Moreover, like many other U.S. states and municipalities, Puerto Rico experienced a significant downturn during the recession. Puerto Rico continues to face significant fiscal challenges, including persistent government deficits, underfunded public pension benefit obligations, underfunded government retirement systems, sizable debt service obligations and a high unemployment rate. Many ratings organizations have previously downgraded a number of securities issued in Puerto Rico or placed them on "negative watch." If the economic situation in Puerto Rico persists or worsens, the volatility, credit quality and performance of the Funds could be adversely affected. Additionally, natural disasters in Puerto Rico could adversely impact the overall economy of Puerto Rico.

### **Reinvestment Risk**

Proceeds from a current investment of PowerShares Senior Loan Portfolio, both interest payments and principal payments, may be reinvested in instruments that offer lower yields than the current investment due in part to market conditions and the interest rate environment at the time of reinvestment. Reinvestment risk is greater on short- to intermediate-term loans.

### **Risk of Investing in Loans**

For PowerShares Senior Loan Portfolio, investments in loans are subject to interest rate risk and credit risk. Interest rate risk refers to fluctuations in the value of a loan resulting from changes in the general level of interest rates. When the general level of interest rates goes up, the prices of most loans go down. When the general level of interest rates goes down, the prices of most loans go up.

Credit risk refers to the possibility that the borrower of a loan will be unable and/or unwilling to make timely interest payments and/or repay the principal on its obligation. Loans are subject to varying degrees of credit risk. All or a portion of the loans in which the Fund invests may be non-investment grade, which involve a greater risk of default on interest and principal payments and of price changes due to the changes in the credit quality of the borrower. Loans rated or deemed to be of below investment grade quality are considered to have speculative characteristics. The value of lower quality loans can be more volatile due to increased sensitivity to adverse borrower, political, regulatory, market or economic developments. These obligations are subject to greater credit risks, including a greater possibility of default or bankruptcy of the borrower. Default in the payment of interest or principal on a loan will result in a reduction in the value of the loan and consequently a reduction in the value of the Fund's investments and a potential decrease in the NAV of the Fund. The risk of default will increase in the event of an economic downturn or a substantial increase in interest rates. The Fund may acquire loans of borrowers that are experiencing, or are more likely to experience, financial difficulty, including loans issued in highly leveraged transactions. The Fund may even acquire and retain in its portfolio loans of borrowers that have filed for bankruptcy protection.

Although the loans in which the Fund invests generally are secured by specific collateral, there can be no assurance that liquidation of such collateral would satisfy the borrower's obligation in the event of non-payment of scheduled interest or principal or that such collateral could be readily liquidated. In addition, collateral securing a loan may be found invalid, may be used to pay other outstanding obligations of the borrower under applicable law or may be difficult to sell. In the event of the bankruptcy of a borrower, the Fund's access to the collateral may be limited by bankruptcy or other insolvency laws and, therefore, the Fund could experience delays or limitations with respect to its ability to realize the benefits of the collateral securing a loan. Moreover, any specific collateral used to secure a loan may decline in value or become illiquid, which would adversely affect the loan's value. As a result, the Fund may not receive payments to which it is entitled.

There is no organized exchange on which loans are traded, and reliable market quotations may not be readily available. Therefore, elements of judgment may play a greater role in valuation of loans than for securities with a more developed secondary market, and the Fund may not realize full value in the event of the need to sell a loan. To the extent that a secondary market does exist for certain loans, the market may be subject to irregular trading activity, wide bid/ask spreads and extended trade settlement periods. Some loans are subject to the risk that a court, pursuant to fraudulent conveyance or other similar laws, could subordinate the loans to presently existing or future indebtedness of the borrower or take other action detrimental to lenders, including the Fund, such as invalidation of loans or causing interest previously paid to be refunded to the borrower. If interest were required to be refunded, it would negatively affect the Fund's investment. Investments in loans also are subject to the risk of changes in legislation or state or federal regulations. If such legislation or regulations impose additional requirements or restrictions on the ability of financial institutions to make loans, the availability of loans for investment by the Fund may be adversely affected.

Many loans are not registered with the SEC or any state securities commission and often are not rated by any nationally recognized rating service. To the extent that a loan has been deemed illiquid, it will be subject to the Fund's restrictions on investment in illiquid securities. In addition, there is generally less readily available, reliable information about most loans than there is for many other types of securities. Although a loan may be senior to equity and other debt securities in a borrower's capital structure, such obligations may be subordinated structurally to obligations of the borrower's subsidiaries.

From time to time, the occurrence of one or more of the factors described above may create volatility in the markets for debt instruments and decrease the liquidity of the loan market. Such conditions, or other similar conditions, may adversely affect the value of loans, widening spreads against higher-quality debt instruments, and making it harder to sell loans at prices at which they have historically or recently traded, thereby further reducing liquidity.

### ***Risk of Investing in Loans to Non-U.S. Borrowers***

PowerShares Senior Loan Portfolio may invest all or a portion of its assets in loans of non-U.S. borrowers. The value of the Fund's investments in loans of non-U.S. borrowers may be adversely affected by political and social instability in their home countries, by changes in economic or taxation policies in those countries, or by the difficulty in enforcing obligations in those countries. Foreign borrowers generally may be subject to less stringent regulations than U.S. companies, including financial reporting requirements and auditing and accounting controls. As a result, generally there is less publicly available information about foreign borrowers than about U.S. companies.

### ***Underlying Funds Risk***

PowerShares CEF Income Composite Portfolio may invest in certain closed-end Underlying Funds and, as such, faces certain risks that apply to the Underlying Funds in which it invests. These risks include the following:

*Interest Rate Risk.* Interest rate risk refers to the risk that fixed-income securities prices generally fall as interest rates rise; conversely, fixed-income securities' prices generally rise as interest rates fall. Specific fixed-income securities differ in their sensitivity to changes in interest rates depending on specific characteristics of each fixed-income security. A measure investors commonly use to determine this sensitivity is called duration. The longer the duration of a particular fixed-income security, the greater its price sensitivity to interest rates. Similarly, a longer duration portfolio of fixed-income securities has greater price sensitivity. Duration is determined by a number of factors including coupon rate, whether the coupon is fixed or floating, time to maturity, call or put features, and various repayment features.

*Credit Risk.* Credit risk is the risk that issuers or guarantors of debt instruments or the counterparty to a derivatives contract, repurchase agreement or loan of portfolio securities is unable or unwilling to make timely interest and/or principal payments or to otherwise honor its obligations. Debt instruments are subject to varying degrees of credit risk, which may be reflected in credit ratings. There is the chance that any of an Underlying Fund's portfolio holdings will have its credit ratings downgraded or will

default (fail to make scheduled interest or principal payments), potentially reducing the fund's income level and share price.

*Non-Investment Grade Securities Risk.* Non-investment grade securities and unrated securities of comparable credit quality are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. These securities may be subject to greater price volatility due to such factors as specific corporate developments, interest rate sensitivity, negative perceptions of the non-investment grade securities markets generally, real or perceived adverse economic and competitive industry conditions and less secondary market liquidity. If the issuer of non-investment grade securities defaults, an Underlying Fund may incur additional expenses to seek recovery.

*Options Risk.* A decision as to whether, when and how to use options involves the exercise of skill and judgment, and even a well-conceived transaction may be unsuccessful to some degree because of market behavior or unexpected events. As the writer of a covered call option, an Underlying Fund forgoes, during the option's life, the opportunity to profit from increases in the market value of the security covering the call option above the sum of the premium and the strike price of the call, but has retained the risk of loss should the price of the underlying security decline. The writer of an option has no control over the time when it may be required to fulfill its obligation as a writer of the option. Once an option writer has received an exercise notice, it cannot effect a closing purchase transaction in order to terminate its transaction in order to terminate its obligation under the option and must deliver the underlying security at the exercise price.

When an Underlying Fund writes covered put options, it bears the risk of loss if the value of the underlying stock declines below the exercise price minus the put premium. If the option is exercised, the Underlying Fund could incur a loss if it is required to purchase the stock underlying the put option at a price greater than the market price of the stock at the time of exercise plus the put premium the Underlying Fund received when it wrote the option. While the Underlying Fund's potential gain in writing a covered put option is limited to distributions earned on the liquid assets securing the put option plus the premium received from the purchaser of the put option, the Underlying Fund risks a loss equal to the entire exercise price of the option minus the put premium.

The hours of trading for options on an exchange may not conform to the hours during which the underlying securities are traded. To the extent that the options markets close before the markets for the underlying securities, significant price and rate movements can take place in the underlying markets that cannot be reflected in the options markets. Call options are marked-to-market daily and their value will be affected by changes in the value and dividend rates of the underlying common stocks, an increase in interest rates, changes in the actual or perceived volatility of the stock market and the underlying common stocks and the remaining time to the options' expiration. Additionally, the exercise price of an option may be adjusted downward before the option's expiration as a result of the occurrence of certain corporate events affecting the underlying equity security, such as extraordinary dividends, stock splits, mergers or other extraordinary distributions or events. A reduction in the exercise price of an

option would reduce the Underlying Fund's capital appreciation potential on the underlying security.

Over-the-counter ("OTC") options differ from exchange-listed options in that they are two-party contracts, with exercise price, premium and other terms negotiated between buyer and seller, and generally do not have as much market liquidity as exchange-listed options. The OTC options written by an Underlying Fund will not be issued, guaranteed or cleared by the Options Clearing Corporation. In addition, the Underlying Fund's ability to terminate the OTC options may be more limited than with exchange-traded options. Banks, broker-dealers or other financial institutions participating in such transaction may fail to settle a transaction in accordance with the terms of the option as written. In the event of default or insolvency of the counterparty, the Underlying Fund may be unable to liquidate an OTC option position.

The purchaser of an index put option has the right to any depreciation in the value of the index below the exercise price of the option on or before the expiration date. The purchaser of an index call option has the right to any appreciation in the value of the index over the exercise price of the option on or before the expiration date. Because the exercise of an index option is settled in cash, sellers of index call options cannot provide in advance for their potential settlement obligations by acquiring and holding the underlying securities. An Underlying Fund will lose money if it is required to pay the purchaser of an index option the difference between the cash value of the index on which the option was written and the exercise price and such difference is greater than the premium received by the Underlying Fund for writing the option. The value of index options written by an Underlying Fund, which will be priced daily, will be affected by changes in the value and dividend rates of the underlying common stocks in the respective index, changes in the actual or perceived volatility of the stock market and the remaining time to the options' expiration. The value of the index options also may be adversely affected if the market for the index options becomes less liquid or smaller. Distributions paid by an Underlying Fund on its common shares may be derived in part from the net index option premiums it receives from selling index put and call options, less the cost of paying settlement amounts to purchasers of the options that exercise their options. Net index option premiums can vary widely over the short term and long term.

There are significant differences between the securities and options markets that could result in an imperfect correlation between these markets, causing a given transaction not to achieve its objectives.

*Derivatives Risk.* Derivatives involve risks different from, and possibly greater than, the risks associated with investing directly in securities and other more traditional investments. For example, derivatives involve the risk of mispricing or improper valuation and the risk that changes in the value of a derivative may not correlate perfectly with the underlying indicator. Derivative transactions can create investment leverage, may be highly volatile and the Underlying Fund could lose more than the amount it invests. Many derivative transactions are entered into OTC (not on an exchange or contract market); as a result, the value of such a derivative transaction will depend on the ability and the willingness of the

Underlying Fund's counterparty to perform its obligations under the transaction. If a counterparty were to default on its obligations, the Underlying Fund's contractual remedies against such counterparty may be subject to bankruptcy and insolvency laws, which could affect the Underlying Fund's rights as a creditor (e.g., the Underlying Fund may not receive the net amount of payments that it is contractually entitled to receive). A liquid secondary market may not always exist for the Underlying Fund's derivative positions at any time.

*Leverage Risk.* Leverage may result from ordinary borrowings, or may be inherent in the structure of certain Underlying Fund investments such as derivatives. If the prices of those investments decrease, or if the cost of borrowing exceeds any increase in the prices of those investments, the net asset value of the Underlying Fund's Shares will decrease faster than if the Underlying Fund had not used leverage. To repay borrowings, an Underlying Fund may have to sell investments at a time and at a price that is unfavorable to the Underlying Fund. Interest on borrowings is an expense the Underlying Fund would not otherwise incur. Leverage magnifies the potential for gain and the risk of loss. If an Underlying Fund uses leverage, there can be no assurance that the Underlying Fund's leverage strategy will be successful.

*Counterparty Risk.* To the extent that an Underlying Fund engages in derivative transactions, it will be subject to credit risk with respect to the counterparties. The Underlying Fund may obtain only a limited or no recovery or may experience significant delays in obtaining recovery under derivative contracts if a counterparty experiences financial difficulties and becomes bankrupt or otherwise fails to perform its obligations under a derivative contract.

*Senior Loans Risk.* The risks associated with senior loans are similar to the risks of junk bonds, although senior loans are typically senior and secured, whereas junk bonds are often subordinated and unsecured. Investments in senior loans are typically below investment grade and are considered speculative because of the credit risk of their issuers. Such companies are more likely to default on their payments of interest and principal owed, and such defaults could reduce an Underlying Fund's NAV and income distributions. An economic downturn generally leads to a higher non-payment rate, and a senior loan may lose significant value before a default occurs. There is no assurance that the liquidation of the collateral would satisfy the claims of the borrower's obligations in the event of the non-payment of scheduled interest or principal, or that the collateral could be readily liquidated. Economic and other events (whether real or perceived) can reduce the demand for certain senior loans or senior loans generally, which may reduce market prices. Senior loans and other debt securities are also subject to the risk of price declines and to increases in prevailing interest rates, although floating-rate debt instruments such as senior loans in which certain Underlying Funds may be expected to invest are substantially less exposed to this risk than fixed-rate debt instruments. No active trading market may exist for certain senior loans, which may impair the ability of an Underlying Fund to realize full value in the event of the need to liquidate such assets. Adverse market conditions may impair the liquidity of some actively traded senior loans. Longer interest rate reset periods generally increase fluctuations in value as a result of changes in market interest rates.

*Foreign Investment Risk.* Investments in the securities of non-U.S. issuers involve risks beyond those associated with investments in U.S. securities. Foreign securities may have relatively low market liquidity, greater market volatility, decreased publicly available information and less reliable financial information about issuers, and inconsistent and potentially less stringent accounting, auditing and financial reporting requirements and standards of practice comparable to those applicable to domestic issuers. Foreign securities also are subject to the risks of expropriation, nationalization, political instability or other adverse political or economic developments and the difficulty of enforcing obligations in other countries. Investments in foreign securities also may be subject to dividend withholding or confiscatory taxes, currency blockage and/or transfer restrictions and higher transactional costs. As the Underlying Fund may invest in securities denominated in foreign currencies, fluctuations in the value of the U.S. dollar relative to the values of other currencies may adversely affect investments in foreign securities and may negatively impact the Underlying Fund's returns.

*Emerging Markets Securities Risk.* Investments in the securities of issuers in emerging market countries involve risks often not associated with investments in the securities of issuers in developed countries. Securities in emerging markets may be subject to greater price fluctuations than securities in more developed markets. Fluctuations in the value of the U.S. dollar relative to the values of other currencies may adversely affect investments in emerging market securities, and emerging market securities may have relatively low market liquidity, decreased publicly available information about issuers, and inconsistent and potentially less stringent accounting, auditing and financial reporting requirements and standards of practice comparable to those applicable to domestic issuers. Emerging market securities also are subject to the risks of expropriation, nationalization or other adverse political or economic developments and the difficulty of enforcing obligations in other countries. Investments in emerging market securities also may be subject to dividend withholding or confiscatory taxes, currency blockage and/or transfer restrictions. Emerging markets are subject to greater market volatility, lower trading volume, political and economic instability, uncertainty regarding the existence of trading markets and more governmental limitations on foreign investment than are more developed markets. Securities law in many emerging market countries is relatively new and unsettled. Therefore, laws regarding foreign investment in emerging market securities, securities regulation, title to securities, and shareholder rights may change quickly and unpredictably. In addition, the enforcement of systems of taxation at federal, regional and local levels in emerging market countries may be inconsistent and subject to sudden change.

*Liquidity Risk.* Closed-end funds are not limited in their ability to invest in illiquid securities. Securities with reduced liquidity involve greater risk than securities with more liquid markets. Market quotations for securities not traded on national exchanges may vary over time, and if the credit quality of a fixed-income security unexpectedly declines, secondary trading of that security may decline for a period of time. In the event that an Underlying Fund voluntarily or involuntarily liquidates portfolio assets during periods of infrequent trading, it may not receive full value for those assets.

*Industry Concentration Risk.* An Underlying Fund from time to time may be concentrated to a significant degree in securities of issuers located in a single industry or a sector. To the extent that the Underlying Funds concentrate in the securities of issuers in a particular industry or sector, the Fund will also concentrate its investments to approximately the same extent on a pro rata basis. By concentrating its investments in an industry or sector, the Fund faces more risks than if it were diversified broadly over numerous industries or sectors. Such industry-based risks, any of which may adversely affect the companies in which the Fund invests, may include, but are not limited to, the following: general economic conditions or cyclical market patterns that could negatively affect supply and demand in a particular industry; competition for resources, adverse labor relations, political or world events; obsolescence of technologies; and increased competition or new product introductions that may affect the profitability or viability of companies in an industry. In addition, at times, such industry or sector may be out of favor and underperform other industries or the market as a whole.

*Inflation Risk.* The value of assets or income from investment will be worth less in the future as inflation decreases the value of money.

*Deflation Risk.* Prices throughout the economy may decline over time, which may have an adverse effect on the market valuation of companies, their assets and revenues. In addition, deflation may have an adverse effect on the creditworthiness of issuers and may make issuer default more likely, which may result in a decline in the value of an Underlying Fund's portfolio.

*Mortgage-Backed Securities Risk.* Mortgage-backed securities represent a participation interest in a pool of residential mortgage loans originated by governmental or private lenders such as banks. They differ from conventional debt securities, which provide for periodic payment of interest in fixed amounts and principal payments at maturity or on specified call dates. Mortgage pass-through securities provide for monthly payments that are a "pass-through" of the monthly interest and principal payments made by the individual borrowers on the pooled mortgage loans. Mortgage pass-through securities may be collateralized by mortgages with fixed rates of interest or adjustable rates. Mortgage-backed securities have different risk characteristics than traditional debt securities. Although generally the value of fixed-income securities increases during periods of falling interest rates and decreases during periods of rising rates, this is not always the case with mortgage-backed securities. This is due to the fact that principal on underlying mortgages may be prepaid at any time as well as other factors. Generally, prepayments will increase during a period of falling interest rates and decrease during a period of rising interest rates. The rate of prepayments also may be influenced by economic and other factors. Prepayment risk includes the possibility that, as interest rates fall, securities with stated interest rates may have the principal prepaid earlier than expected, requiring an Underlying Fund to invest the proceeds at generally lower interest rates. Certain mortgage-backed securities may be more volatile, less liquid and more difficult to value than other traditional types of debt securities.

*Asset-Backed Securities Risk.* Asset-backed securities have risk characteristics similar to mortgage-backed securities. Like mortgage-backed securities, they generally decrease in value as a result of interest rate increases, but may benefit less than other fixed-income securities from declining interest rates, principally because of prepayments. Also, as in the case of mortgage-backed securities, prepayments generally increase during a period of declining interest rates although other factors, such as changes in credit use and payment patterns, also may influence prepayment rates. Asset-backed securities also involve the risk that various federal and state consumer laws and other legal, regulatory and economic factors may result in the collateral backing the securities being insufficient to support payment on the securities. Certain asset-backed securities may be more volatile, less liquid and more difficult to value than other traditional types of debt securities.

*Small- and Mid-Capitalization Company Risk.* Investing in securities of small- and mid-capitalization companies involves greater risk than customarily is associated with investing in larger, more established companies. These companies' securities may be more volatile and less liquid than those of more established companies. These securities may have returns that vary, sometimes significantly, from the overall securities market. Often small- and mid-capitalization companies and the industries in which they focus are still evolving and, as a result, they may be more sensitive to changing market conditions.

*Developments in Financial Markets.* The developments in recent years in the global financial markets illustrate that the current environment is one of extraordinary and possibly unprecedented uncertainty. Conditions in markets in the U.S. and abroad over the past few years have caused firms in the financial services sector to take significant losses relating to, among other things, sub-prime mortgages and the re-pricing of credit risk in the broadly syndicated loan market. The economic conditions have resulted, and may continue to result, in an unusually high degree of volatility in the financial markets. General market uncertainty and consequent re-pricing of risk have led to market imbalances of sellers and buyers, which in turn have resulted in significant valuation uncertainties in a variety of instruments. These conditions resulted, and in many cases continue to result in, greater volatility, less liquidity, widening of credit spreads and a lack of price transparency, with many investments remaining illiquid and of uncertain value. In addition, these market conditions may make valuation of some of the Underlying Funds' investments uncertain and/or result in sudden and significant valuation increases or declines in its holdings. A significant decline in the value of an Underlying Fund's portfolio would likely result in a significant decline in the value of an investment in the Underlying Fund.

The instability in the financial markets in recent years has led the U.S. and foreign governments to take unprecedented actions designed to support certain financial institutions and segments of the financial markets that have experienced extreme volatility, and in some cases a lack of liquidity. Federal, state and other governments, their regulatory agencies or self-regulatory organizations may take actions that affect the regulation of the securities in which the Underlying Funds invest, or the issuers of the securities in which the Underlying Funds invest, in unforeseeable ways that could have a material adverse effect on an Underlying Fund's

business and operations. Such legislation or regulation could limit or preclude the Underlying Fund's ability to achieve its investment objectives. Furthermore, volatile financial markets can expose the Underlying Fund to greater market and liquidity risk and potential difficulty in valuing portfolio instruments held by the Underlying Fund.

In addition, there can be no assurance that the actions taken by the U.S. and foreign governments, central banks and other governmental and regulatory bodies for the purpose of seeking to stabilize the financial markets will achieve the intended effect and further government or market developments could adversely affect the Underlying Funds.

*Anti-Takeover Provisions Risk.* The organizational documents of certain of the Underlying Funds include provisions that could limit the ability of other entities or persons to acquire control of the Underlying Fund or to change the composition of its board, which could limit the ability of shareholders to sell their shares at a premium over prevailing market prices by discouraging a third party from seeking to obtain control of the Underlying Fund.

### ***Risks of Investing in Closed-End Funds***

The shares of closed-end funds may trade at a discount or premium to, or at, their NAV. To the extent that certain funds invests a portion of its assets in closed-end funds, those assets will be subject to the risks of the closed-end fund's portfolio securities, and a shareholder in the Fund will bear not only his or her proportionate share of the expenses of the Fund, but also, indirectly, the expenses of the closed-end fund. The securities of closed-end funds in which certain funds may invest may be leveraged. As a result, certain funds may be exposed indirectly to leverage through an investment in such securities. An investment in securities of closed-end funds that use leverage may expose the Fund to higher volatility in the market value of such securities and the possibility that the Fund's long-term returns on such securities (and, indirectly, the long-term returns of the Shares) will be diminished.

### ***Risks of Loan Assignments and Participations***

As the purchaser of an assignment, PowerShares Senior Loan Portfolio typically succeeds to all the rights and obligations of the assigning institution and becomes a lender under the credit agreement with respect to the debt obligation; however, the Fund may not be able to unilaterally enforce all rights and remedies under the loan and with regard to any associated collateral. Because assignments may be arranged through private negotiations between potential assignees and potential assignors, the rights and obligations acquired by the Fund as the purchaser of an assignment may differ from, and be more limited than, those held by the assigning lender. In addition, if the loan is foreclosed, the Fund could become part owner of any collateral and could bear the costs and liabilities of owning and disposing of the collateral. The Fund may be required to pass along to a purchaser that buys a loan from the Fund by way of assignment, a portion of any fees to which the Fund is entitled under the loan. In connection with purchasing participations, the Fund generally will have no right to enforce compliance by the borrower with the terms of the loan agreement relating to the loan, nor any rights of set-off against the borrower, and the Fund may not directly benefit from any

collateral supporting the loan in which it has purchased the participation. As a result, the Fund will be subject to the credit risk of both the borrower and the lender that is selling the participation. In the event of the insolvency of the lender selling a participation, the Fund may be treated as a general creditor of the lender and may not benefit from any set-off between the lender and the borrower.

### ***Risk of Subordinated Debt***

Perpetual subordinated debt is a type of hybrid instrument that has no maturity date for the return of principal and does not need to be redeemed by the issuer. These investments typically have lower credit ratings and lower priority than other obligations of an issuer during bankruptcy, presenting a greater risk for nonpayment. This risk increases as the priority of the obligation becomes lower. Payments on these securities may be subordinated to all existing and future liabilities and obligations of subsidiaries and associated companies of an issuer. Claims of creditors of such subsidiaries and associated companies will have priority over the issuer and the Fund to the assets of those subsidiaries and associated companies. Additionally, some perpetual subordinated debt does not restrict the ability of an issuer's subsidiaries to incur further unsecured indebtedness.

### ***Sampling Risk***

Certain funds' use of a representative sampling approach will result in their holding a smaller number of securities than are in its Underlying Index. As a result, an adverse development to an issuer of securities that certain funds hold could result in a greater decline in NAV than would be the case if the Fund held all of the securities in its Underlying Index. To the extent the assets in certain funds are smaller, these risks will be greater. In addition, by sampling the securities in an Underlying Index, certain funds face the chance that the securities selected for the Fund, in the aggregate, will not provide investment performance matching that of the Fund's Underlying Index, thereby increasing tracking error.

### ***Senior Loans Risk***

The risks associated with senior loans are similar to the risks of junk bonds, although senior loans are typically senior and secured, whereas junk bonds are often subordinated and unsecured. Investments in senior loans are typically below investment grade and are considered speculative because of the credit risk of their issuers. Such companies are more likely to default on their payments of interest and principal owed, and such defaults could reduce PowerShares Senior Loan Portfolio's NAV and income distributions. An economic downturn generally leads to a higher non-payment rate, and a senior loan may lose significant value before a default occurs. There is no assurance that the liquidation of the collateral would satisfy the claims of the borrower's obligations in the event of the non-payment of scheduled interest or principal, or that the collateral could be readily liquidated. Economic and other events (whether real or perceived) can reduce the demand for certain senior loans or senior loans generally, which may reduce market prices. Senior loans and other debt securities also are subject to the risk of price declines and to increases in prevailing interest rates, although floating-rate debt instruments such as senior loans are substantially less exposed to this risk than fixed-rate debt instruments. No active trading market may exist for

certain senior loans, which may impair the ability of PowerShares Senior Loan Portfolio to realize full value in the event of the need to liquidate such assets. Adverse market conditions may impair the liquidity of some actively traded senior loans. Longer interest rate reset periods generally increase fluctuations in value as a result of changes in market interest rates.

### ***Short-Term and Intermediate-Term Bond Risk***

PowerShares Global Short Term High Yield Bond Portfolio invests in bonds with a short term (i.e., three years or less) until maturity, and PowerShares LadderRite 0-5 Year Corporate Bond Portfolio invests in bonds with a short term or intermediate term (i.e., five years or less) until maturity. The amount of time until a fixed-income security matures can lead to various risks, including changes in interest rates over the life of a bond. Short- and intermediate-term fixed income securities generally provide lower returns than longer-term fixed income securities. The average maturity of the Funds' investments will affect the volatility of the Funds' share price.

### ***Small- and Mid-Capitalization Company Risk***

Investing in securities of small- and/or mid-capitalization companies involves greater risk than customarily is associated with investing in larger, more established companies. These companies' securities may be more volatile and thinly traded (that is, less liquid) than those of more established companies. These securities may have returns that vary, sometimes significantly, from the overall securities market. Often small- and mid-capitalization companies and the industries in which they focus are still evolving and, as a result, they may be more sensitive to changing market conditions. In addition, small- and mid-capitalization companies are typically less financially stable than larger, more established companies, and they may depend on a small number of essential personnel, making them more vulnerable to loss of personnel. Smaller capitalization companies also normally have less diverse product lines than large-capitalization companies and are more susceptible to adverse developments concerning their products. As such, small- and mid-capitalization companies typically are more likely to be adversely affected than large-capitalization companies by changes in earning results, business prospects, investor expectations or poor economic or market conditions.

### ***Sovereign Debt Risk***

Investments in sovereign debt securities involve special risks, including the availability of sufficient foreign exchange on the date a payment is due, the relative size of the debt service burden to the economy as a whole, and the government debtor's policy towards the International Monetary Fund and the political constraints to which a government debtor may be subject. The governmental authority that controls the repayment of sovereign debt may be unwilling or unable to repay the principal and/or interest when due in accordance with the terms of such securities due to the extent of its foreign reserves. If an issuer of sovereign debt defaults on payments of principal and/or interest, certain funds may have limited legal recourse against the issuer and/or guarantor. In certain cases, remedies must be pursued in the courts of the defaulting party itself, and the Fund's ability to obtain recourse may be limited.

Certain issuers of sovereign debt may be dependent on disbursements from foreign governments, multilateral agencies and others abroad to reduce principal and interest arrearages on their debt. Such disbursements may be conditioned upon a debtor's implementation of economic reforms and/or economic performance and the timely service of such debtor's obligations. A failure on the part of the debtor to implement such reforms, achieve such levels of economic performance or repay principal or interest when due may result in the cancellation of such third parties' commitments to lend funds to the government debtor, which may impair the debtor's ability to service its debts on a timely basis. If certain funds are a holder of government debt, it may be requested to participate in the rescheduling of such debt and to extend further loans to government debtors.

### ***Sub-Sovereign Debt Risk***

PowerShares Global Short Term High Yield Bond Portfolio invests in sub-sovereign government bonds represent the debt of state, provincial, territorial, municipal, local or other political subdivisions, including other governmental entities or agencies, other than sovereign governments. In addition to risks of investing in sovereign debt generally, risks of investing in sub-sovereign debt include the fact that such investments may or may not be issued by, or guaranteed as to principal and interest by, the sub-sovereign's larger sovereign entity. Certain foreign sub-sovereign securities may be backed by the issuer's right to borrow from a central bank or other regional banking entity, while others may be backed only by the assets and credit of the issuing sub-sovereign foreign entity.

### ***State-Specific and U.S. Territories' Concentration Risk***

Each of PowerShares California AMT-Free Municipal Bond Portfolio and PowerShares New York AMT-Free Municipal Bond Portfolios will be less diversified geographically than certain funds investing across many states and therefore has greater exposure to adverse economic and political changes in New York, California and Puerto Rico, as applicable.

### ***Supranational Entities Risk***

PowerShares Global Short Term High Yield Bond Portfolio may invest in obligations issued or guaranteed by supranational entities, which may include, for example, entities such as the International Bank for Reconstruction and Development (the World Bank). If one or more shareholders of a supranational entity fails to make necessary additional capital contributions, the entity may be unable to pay interest or repay principal on its debt securities, and the Fund may lose money on such investments.

### ***Tax Risk***

For PowerShares California AMT-Free Municipal Bond Portfolio, PowerShares National AMT-Free Municipal Bond Portfolio, PowerShares New York AMT-Free Municipal Bond Portfolio and PowerShares VRDO Tax-Free Weekly Portfolio, there is no guarantee that the Fund's income will be exempt from federal or state income taxes. Events occurring after the date of issuance of a municipal bond or after the Fund's acquisition of a municipal bond may result in a determination that interest on that bond is includible in gross income for federal income tax purposes retroactively to its date of issuance. Such a determination may cause a

portion of prior distributions by that Fund to its shareholders to be taxable to those shareholders in the year of receipt. Federal or state changes in income or alternative minimum tax rates or in the tax treatment of municipal bonds may make municipal bonds less attractive as investments and cause them to lose value. The Index Providers for PowerShares California AMT-Free Municipal Bond Portfolio, PowerShares National AMT-Free Municipal Bond Portfolio, PowerShares New York AMT-Free Municipal Bond Portfolio and PowerShares VRDO Tax-Free Weekly Portfolio rely on the bond issuer's prospectus disclosure of the opinion from its counsel as to the tax-exempt status of the investment.

### **U.S. Government Obligation Risk**

PowerShares 1-30 Laddered Treasury Portfolio may invest in U.S. government obligations issued or guaranteed by the U.S. Government, its agencies and instrumentalities, including bills, notes and bonds issued by the U.S. Treasury. U.S. Government securities include securities that are issued or guaranteed by the United States Treasury, by various agencies of the U.S. Government, or by various instrumentalities which have been established or sponsored by the U.S. Government. U.S. Treasury securities are backed by the "full faith and credit" of the United States. Securities issued or guaranteed by federal agencies and U.S. Government-sponsored instrumentalities may or may not be backed by the full faith and credit of the United States. In the case of those U.S. Government securities not backed by the full faith and credit of the United States, the investor must look principally to the agency or instrumentality issuing or guaranteeing the security for ultimate repayment, and may not be able to assert a claim against the United States itself in the event that the agency or instrumentality does not meet its commitment. The U.S. Government, its agencies and instrumentalities do not guarantee the market value of their securities, and consequently, the value of such securities may fluctuate.

### **Valuation Risk**

Financial information related to securities of non-U.S. issuers may be less reliable than information related to securities of U.S. issuers, which may make it difficult to obtain a current price for a non-U.S. security held by certain funds. In certain circumstances, market quotations may not be readily available for some securities, and those securities may be fair valued. The value established for a security through fair valuation may be different from what would be produced if the security had been valued using market quotations. Fund securities that are valued using techniques other than market quotations, including "fair valued" securities, may be subject to greater fluctuation in their value from one day to the next than would be the case if market quotations were used. In addition, there is no assurance that certain funds could sell a portfolio security for the value established for it at any time, and it is possible that certain funds would incur a loss because a security is sold at a discount to its established value.

### **Valuation Time Risk**

Certain funds will invest in securities of foreign issuers and, because foreign exchanges may be open on days when the Funds do not price their Shares, the value of the non-U.S. securities in each Fund's portfolio may change on days when you will not be able to purchase or sell your Shares. As a result, trading spreads

and the resulting premium or discount on the Shares may widen, and, therefore, increase the difference between the market price of the Shares and the NAV of such Shares.

### **Variable Rate Debt Obligations Risk**

For PowerShares VRDO Tax-Free Weekly Portfolio, there may not be an active secondary market with respect to particular variable rate instruments in which the Fund invests, which could make disposing of a variable rate instrument difficult during periods that the Fund is not entitled to exercise its demand rights or if the issuer and/or the remarketing agent defaulted on its payment obligation. This could cause the Fund to suffer a loss with respect to such instruments.

### **When Issued and Delayed Delivery Transactions**

PowerShares Senior Loan Portfolio may also purchase and sell interests in senior loans and other portfolio securities on a when issued and delayed delivery basis. No income accrues to the Fund on such interests or securities in connection with such purchase transactions prior to the date that the Fund actually takes delivery of such interests or securities. These transactions are subject to market fluctuation; the value of the interests in senior loans and other portfolio debt securities at delivery may be more or less than their purchase price, and yields generally available on such interests or securities when delivery occurs may be higher or lower than yields on the interests or securities obtained pursuant to such transactions. Because the Fund relies on the buyer or seller, as the case may be, to consummate the transaction, failure by the other party to complete the transaction may result in the Fund missing the opportunity of obtaining a price or yield considered to be advantageous. When the Fund is the buyer in such a transaction, however, it will maintain, in a segregated account with its custodian, cash, liquid securities or liquid senior loans having an aggregate value at least equal to the amount of such purchase commitments until payment is made. The Fund will make commitments to purchase such interests or securities on such basis only with the intention of actually acquiring these interests or securities, but the Fund may sell such interests or securities prior to the settlement date if such sale is considered to be advisable. To the extent the Fund engages in when issued and delayed delivery transactions, it will do so for the purpose of acquiring interests or securities for the Fund's portfolio consistent with the Fund's investment objective and policies and not for the purpose of investment leverage. No specific limitation exists as to the percentage of the Fund's assets which may be used to acquire securities on a when issued or delayed delivery basis.

### **Non-Principal Investment Strategies**

Each Fund, after investing at least 80% (and, for PowerShares CEF Income Composite Portfolio and PowerShares Variable Rate Preferred Portfolio, at least 90%) of its total assets in securities that comprise its respective Underlying Index, may invest its remaining assets in securities not included in its Underlying Index, in money market instruments, including repurchase agreements or other funds that invest exclusively in money market instruments (subject to applicable limitations under the 1940 Act or exemptions therefrom), convertible securities and structured notes (notes on which the amount of principal repayment and interest payments is based on the movement of one or more

specified factors, such as the movement of a particular security or securities index). Convertible securities and structured notes may be used by certain funds in seeking performance that corresponds to its respective Underlying Index and in managing cash flows. The Adviser anticipates that it may take approximately three business days (a business day is any day that the New York Stock Exchange ("NYSE") is open) for the Adviser to fully reflect the additions to, and deletions from, each Fund's Underlying Index in the portfolio composition of that Fund.

PowerShares Senior Loan Portfolio has entered into a committed, unsecured line of credit with a syndicate of lending banks that allows the Fund to borrow an amount up to 33 1/3% of its assets for temporary or emergency purposes or to allow for an orderly liquidation of securities to meet redemption requests. The Fund bears any interest expenses associated with the line of credit. The Adviser pays the set-up fees and the commitment fee based on the amount of the commitment that has not been utilized.

In accordance with 1940 Act rules, each Fund (except PowerShares CEF Income Composite Portfolio) has adopted a policy to invest at least 80% of the value of net assets (plus the amount of any borrowing for investment purposes) in certain types of securities (e.g., fixed income or preferred securities) or in an industry, country or geographical region, as applicable, that is suggested by its name (for each Fund, an "80% investment policy"). Each of these Funds (except PowerShares VRDO Tax-Free Weekly Portfolio) will meet its 80% investment policy by investing at least 80% of its net assets (plus the amount of any borrowing for investment purposes) in such securities. PowerShares VRDO Tax-Free Weekly Portfolio will meet its 80% investment policy by investing at least 80% of its total assets in such securities.

Each Fund considers the securities suggested by its name to be those securities that comprise its respective Underlying Index. Therefore, each Fund anticipates meeting its 80% investment policy because it already is required to invest at least 80% (and for PowerShares Variable Rate Preferred Portfolio, at least 90%) of the value of its total assets in securities that comprise its respective Underlying Index, in accordance with the terms of the Trust's exemptive relief.

The 80% investment policy of each Fund with such a policy (except that of PowerShares California AMT-Free Municipal Bond Portfolio, PowerShares National AMT-Free Municipal Bond Portfolio, PowerShares New York AMT-Free Municipal Bond Portfolio and PowerShares VRDO Tax-Free Weekly Portfolio) constitutes a non-fundamental policy. The Board of Trustees (the "Board") of the Trust may change such non-fundamental policies at any time without shareholder approval upon 60 days' written notice to shareholders.

The 80% investment policy of each of PowerShares California AMT-Free Municipal Bond Portfolio, PowerShares National AMT-Free Municipal Bond Portfolio, PowerShares New York AMT-Free Municipal Bond Portfolio and PowerShares VRDO Tax-Free Weekly Portfolio is fundamental and may not be changed without shareholder approval.

In addition to its fundamental 80% investment policy, each of PowerShares California AMT-Free Municipal Bond Portfolio,

PowerShares National AMT-Free Municipal Bond Portfolio and PowerShares New York AMT-Free Municipal Bond Portfolio has adopted a non-fundamental investment policy to invest at least 80% of its net assets (plus the amount of any borrowings for investment purposes) in municipal securities that are exempt from the federal alternative minimum tax. The Board may change this non-fundamental policy at any time upon 60 days' written notice to shareholders.

Each Fund's investment objective (except that of PowerShares Chinese Yuan Dim Sum Bond Portfolio and PowerShares Senior Loan Portfolio) constitutes a non-fundamental policy. The investment objective of each of PowerShares Chinese Yuan Dim Sum Bond Portfolio and PowerShares Senior Loan Portfolio is a fundamental policy.

The complete list of fundamental and non-fundamental policies of the Funds is set forth in the Trust's Statement of Additional Information ("SAI") under the section "Investment Restrictions."

### ***Borrowing Money***

Each Fund (except PowerShares Chinese Yuan Dim Sum Bond Portfolio, PowerShares Fundamental Investment Grade Corporate Bond Portfolio, PowerShares LadderRite 0-5 Year Corporate Bond Portfolio, PowerShares Variable Rate Preferred Portfolio and PowerShares Senior Loan Portfolio) may borrow money from a bank up to a limit of 10% of the value of its total assets, but only for temporary or emergency purposes.

PowerShares Chinese Yuan Dim Sum Bond Portfolio, PowerShares Fundamental Investment Grade Corporate Bond Portfolio, PowerShares LadderRite 0-5 Year Corporate Bond Portfolio, PowerShares Senior Loan Portfolio and PowerShares Variable Rate Preferred Portfolio may borrow money to the extent permitted by (i) the 1940 Act, (ii) the rules and regulations promulgated by the SEC under the 1940 Act, or (iii) an exemption or other relief applicable to the Fund from the provisions of the 1940 Act.

### ***Securities Lending***

PowerShares Emerging Markets Sovereign Debt Portfolio and PowerShares Preferred Portfolio may lend its portfolio securities to brokers, dealers and other financial institutions. In connection with such loans, the Fund receives liquid collateral equal to at least 102% (105% for international securities) of the value of the loaned portfolio securities. This collateral is marked-to-market on a daily basis.

### ***Additional Risks of Investing in the Funds***

The following provides additional risk information regarding investing in the Funds.

### ***Index Rebalancing Risk***

Pursuant to the methodology that each Index Provider uses to calculate and maintain its Underlying Index, a security may be removed from certain funds' Underlying Indexes at any time in the event the Underlying Index reaches certain limitations (e.g. foreign ownership limitations). As a result, the Fund may be forced to sell securities at inopportune times or for prices other than at current market values or may elect not to sell such securities on the day that they are removed from the Underlying Index, due to market

conditions or otherwise. Due to these factors, the variation between the Fund's annual return and the return of its Underlying Index may increase significantly.

Apart from scheduled rebalances, an Index Provider may carry out additional ad hoc rebalances to an Underlying Index to, for example, correct an error in the selection of constituents. When certain funds in turn rebalance its portfolio, any transaction costs and market exposure arising from such portfolio rebalancing will be borne by the Fund and its shareholders. Unscheduled rebalances also expose the Funds to additional tracking error risk. Therefore, errors and additional ad hoc rebalances carried out by an Index Provider may increase a certain funds' costs and market exposure.

### ***Risks of Investing in Asia Pacific Companies***

PowerShares Emerging Markets Sovereign Debt Portfolio may invest a portion of its assets in securities issued by companies in Asia Pacific countries. The level of development of the economies of countries in the Asia Pacific region varies greatly. Furthermore, since the economies of the countries in the region are largely intertwined, if an economic recession is experienced by any of these countries, it likely will adversely impact the economic performance of other countries in the region. Increased competition, high inflation rates, undeveloped financial services sectors, currency fluctuations or restrictions, political and social instability and increased economic volatility may adversely affect certain economies in the region.

### ***Russian Securities Risk***

The United States and the European Union have imposed economic sanctions on certain Russian individuals and entities, and either the United States or the European Union also could institute broader sanctions. The current sanctions, or the threat of further sanctions, may result in the decline of the value or liquidity of Russian securities, a weakening of the ruble or other adverse consequences to the Russian economy, any of which could negatively impact certain funds' investments in Russian securities. These economic sanctions also could result in the immediate freeze of Russian securities, which could impair the ability of certain funds to buy, sell, receive or deliver those securities. Both the existing and potential future sanctions also could result in Russia taking counter measures or retaliatory actions, which may impair further the value or liquidity of Russian securities, and therefore may negatively impact certain funds.

### ***Securities Lending Risk***

Securities lending involves a risk of loss because the borrower may fail to return the securities in a timely manner or at all. If certain funds that lent their securities were unable to recover the securities loaned, it may sell the collateral and purchase a replacement security in the market. Lending securities entails a risk of loss to certain funds if and to the extent that the market value of the loaned securities increases and the collateral is not increased accordingly.

Any cash received as collateral for loaned securities will be invested in an affiliated money market fund. This investment is subject to market appreciation or depreciation and certain funds will bear any loss on the investment of its cash collateral.

### ***Shares May Trade at Prices Different than NAV***

The NAV of the Shares generally will fluctuate with changes in the market value of certain funds' holdings. The market prices of Shares generally will fluctuate in accordance with changes in NAV, as well as the relative supply of and demand for Shares on the exchange on which certain funds trade. The Adviser cannot predict whether the Shares will trade below, at or above the Fund's NAV. Price differences may be due largely to the fact that supply and demand forces at work in the secondary trading market for the Shares will be related, but not identical, to the same forces influencing the prices of the securities of each Fund's Underlying Index trading individually or in the aggregate at any point in time. In addition, disruptions to creations and redemptions or the existence of extreme market volatility may result in trading prices that differ significantly from NAV. If a shareholder purchases at a time when the market price is at a premium to the NAV or sells at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

### ***Trading Issues***

Investors buying or selling Shares in the secondary market may pay brokerage commissions or other charges, which may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares. Moreover, trading in Shares on either NYSE Arca ("NYSE Arca") or The NASDAQ Stock Market LLC ("NASDAQ"), (together, the "Exchanges") may be halted due to market conditions or for reasons that, in the view of the relevant Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchanges is subject to trading halts caused by extraordinary market volatility pursuant to the Exchanges' "circuit breaker" rules. There can be no assurance that the requirements of the relevant Exchange necessary to maintain the listing of each Fund will continue to be met or will remain unchanged.

---

## **Tax-Advantaged Structure of ETFs**

Unlike interests in conventional mutual funds, which typically are bought and sold only at closing NAVs, the Shares are traded throughout the day in the secondary market on a national securities exchange on an intra-day basis, and are created and redeemed principally in-kind (except PowerShares Build America Bond Portfolio, PowerShares California AMT-Free Municipal Bond Portfolio, PowerShares Chinese Yuan Dim Sum Bond Portfolio, PowerShares International Corporate Bond Portfolio, PowerShares National AMT-Free Municipal Bond Portfolio, PowerShares New York AMT-Free Municipal Bond Portfolio, PowerShares Senior Loan Portfolio and PowerShares VRDO Tax-Free Weekly Portfolio, which are issued and redeemed principally for cash) in Creation Units at each day's next calculated NAV. These in-kind arrangements are designed to protect shareholders from the adverse effects on a Fund's portfolio that could arise from frequent cash creation and redemption transactions. In a conventional mutual fund, redemptions can have an adverse tax impact on taxable shareholders because the mutual funds may need to sell portfolio securities to obtain cash to meet redemptions. These sales may generate taxable gains that must be distributed to the shareholders of the mutual fund, whereas the Shares' in-kind

redemption mechanism generally will not lead to such taxable events for a Fund or its shareholders.

Because the PowerShares Build America Bond Portfolio, PowerShares Chinese Yuan Dim Sum Bond Portfolio, PowerShares California AMT-Free Municipal Bond Portfolio, PowerShares International Corporate Bond Portfolio, PowerShares National AMT-Free Municipal Bond Portfolio, PowerShares New York AMT-Free Municipal Bond Portfolio, PowerShares Senior Loan Portfolio and PowerShares VRDO Tax-Free Weekly Portfolio intend to effect creations and redemptions principally for cash, investments in Shares of such Funds may be less tax efficient than conventional ETFs.

Certain Funds may recognize gains as a result of rebalancing their securities holdings to reflect changes in the securities included in such Funds' Underlying Indexes. Certain Funds may be required to distribute any such gains to their shareholders to avoid adverse federal income tax consequences. For information concerning the tax consequences of distributions, see the section entitled "Dividends, Other Distributions and Taxes" in this Prospectus.

---

## Portfolio Holdings

A description of the Trust's policies and procedures with respect to the disclosure of the Funds' portfolio holdings is available in the Trust's SAI, which is available at [www.invescopowershares.com](http://www.invescopowershares.com).

---

## Management of the Funds

Invesco PowerShares Capital Management LLC is a registered investment adviser with its offices at 3500 Lacey Road, Suite 700, Downers Grove, Illinois 60515. The Adviser serves as the investment adviser to the Trust, the PowerShares India Exchange-Traded Fund Trust, PowerShares Actively Managed Exchange-Traded Fund Trust, PowerShares Exchange-Traded Fund Trust and PowerShares Actively Managed Exchange-Traded Commodity Fund Trust, a family of ETFs, with combined assets under management of approximately \$48.0 billion as of January 31, 2016.

As the Funds' investment adviser, the Adviser has overall responsibility for selecting and continuously monitoring the Funds' investments, managing the Funds' business affairs, providing certain clerical, bookkeeping and other administrative services for the Trust and, for PowerShares Senior Loan Portfolio, oversight of the Sub-Adviser.

Invesco Senior Secured Management, Inc. (the "Sub-Adviser") is located at 1166 Avenue of the Americas, New York, New York 10036, and has acted as an investment adviser since 1992.

### Portfolio Managers

The Adviser uses a team of portfolio managers, investment strategists and other investment specialists in managing the Funds and in overseeing the Sub-Adviser's investment activities. This team approach brings together many disciplines and leverages the Adviser's extensive resources.

Peter Hubbard, Vice President of the Trust, oversees all research, portfolio management and trading operations of each Fund and oversees and monitors the Sub-Adviser's research, portfolio management and trading operations for PowerShares Senior Loan Portfolio. In this capacity, Mr. Hubbard oversees a team of portfolio managers (with Mr. Hubbard, the "Portfolio Managers") who are responsible for the day-to-day management of the Funds. In managing the Funds, Mr. Hubbard receives management assistance (and for PowerShares Senior Loan Portfolio, oversight and monitoring assistance) from Scott Baskind, Philip Fang, Michael Jeanette, Gary Jones, Jeffrey W. Kernagis, Seth Misshula, Jonathan Nixon, Richard Ose, Theodore Samulowitz and Tony Seisser. Each Portfolio Manager is responsible for various functions related to portfolio management, including investing cash flows, coordinating with other team members to focus on certain asset classes, implementing investment strategy and researching and reviewing investment strategy. Each Portfolio Manager has limitations on his authority for risk management and compliance purposes that the Adviser believes to be appropriate.

Peter Hubbard, Vice President and Director of Portfolio Management of the Adviser, has been responsible for each Fund (and for PowerShares Senior Loan Portfolio, oversight and monitoring of the Sub-Adviser) since its inception and has been associated with the Adviser since 2005.

Philip Fang, Vice President and Portfolio Manager of the Adviser, has been responsible for certain Funds in the Trust (and for PowerShares Senior Loan Portfolio, oversight and monitoring of the Sub-Adviser) since July 2010 and has been associated with the Adviser since 2007.

Michael Jeanette, Vice President and Senior Portfolio Manager of the Adviser, has been responsible for certain Funds in the Trust since August 2008 and has been associated with the Adviser since 2008.

Gary Jones, Vice President and Portfolio Manager of the Adviser, has been responsible for certain Funds in the Trust since January 2012 and has been associated with the Adviser since December 2010.

Jeffrey W. Kernagis, Vice President and Senior Portfolio Manager of the Adviser, has been responsible for certain Funds in the Trust (and for PowerShares Senior Loan Portfolio, oversight and monitoring of the Sub-Adviser) since their inception and has been associated with the Adviser since 2007.

Jonathan Nixon, Vice President and Portfolio Manager of the Adviser, has been responsible for certain Funds in the Trust since February 2015 and has been associated with the Adviser since 2011.

Richard Ose, Vice President and Portfolio Manager of the Adviser, has been responsible for certain Funds in the Trust since their inception. Mr. Ose has been associated with the Adviser since 2011.

Theodore Samulowitz, Vice President and Portfolio Manager of the Adviser, has been responsible for certain Funds in the Trust since May 2012 and has been associated with the Adviser since 2012. From 2010 to 2012, he was the Managing Partner of Endurance Capital Markets LLC.

Tony Seisser, Vice President and Portfolio Manager of the Adviser, has been responsible for certain Funds in the Trust since February 2014 and has been associated with the Adviser since 2013. From 2010 to 2013, he was employed by Guggenheim Funds Distributors, Inc.

The Adviser has overall responsibility for the general management and administration of the PowerShares Senior Loan Portfolio. The Adviser oversees the Sub-Adviser's investment of that Fund's assets. Investment decisions for PowerShares Senior Loan Portfolio are made by investment management teams at the Sub-Adviser. The following individuals are responsible jointly and primarily for the day-to-day management of that Fund's investments:

Scott Baskind, Head of Global Senior Loans and Chief Investment Officer for the Sub-Adviser's Senior Secured Bank Loan Group, has been responsible for the management of the Fund since its inception, and has been associated with the Sub-Adviser and/or its affiliates since 1999.

Seth Misshula, Head Trader and Portfolio Manager for the Sub-Adviser's Senior Secured Bank Loan Group, has been responsible for the management of the Fund since February 2014, and has been associated with the Sub-Adviser and/or its affiliates since 2005.

The Trust's SAI provides additional information about the Portfolio Managers' compensation structure, other accounts that the Portfolio Managers manage and the Portfolio Managers' ownership of Shares.

## Advisory Fees

Pursuant to an investment advisory agreement between the Adviser and the Trust (the "Investment Advisory Agreement"), each Fund pays the Adviser an annual unitary management fee equal to a percentage of its average daily net assets set forth in the chart below:

Fund	Management Fee
PowerShares 1-30 Laddered Treasury Portfolio	0.25%
PowerShares Build America Bond Portfolio	0.28%
PowerShares California AMT-Free Municipal Bond Portfolio	0.28%
PowerShares CEF Income Composite Portfolio	0.50%
PowerShares Chinese Yuan Dim Sum Bond Portfolio	0.45%
PowerShares Emerging Markets Sovereign Debt Portfolio	0.50%
PowerShares Fundamental High Yield <sup>®</sup> Corporate Bond Portfolio	0.50%
PowerShares Fundamental Investment Grade Corporate Bond Portfolio	0.22%
PowerShares Global Short Term High Yield Bond Portfolio	0.35%
PowerShares International Corporate Bond Portfolio	0.50%
PowerShares LadderRite 0-5 Year Corporate Bond Portfolio	0.22%
PowerShares National AMT-Free Municipal Bond Portfolio	0.28%
PowerShares New York AMT-Free Municipal Bond Portfolio	0.28%
PowerShares Preferred Portfolio	0.50%
PowerShares Senior Loan Portfolio	0.65%
PowerShares Variable Rate Preferred Portfolio	0.50%
PowerShares VRDO Tax-Free Weekly Portfolio	0.25%

Out of each Fund's unitary management fee, the Adviser pays substantially all expenses of the Fund, including the costs of transfer agency, custody, fund administration, legal, audit and other services, except for advisory fees, distribution fees, if any, brokerage expenses, taxes, interest (including, for PowerShares Senior Loan Portfolio, interest expenses associated with the line of credit), litigation expenses and other extraordinary expenses (including Acquired Fund Fees and Expenses, if any). For PowerShares Senior Loan Portfolio, the Adviser also pays out of the unitary management fee the payments to the Sub-Adviser, as well as the set-up fees and commitment fees associated with the line of credit.

The Funds may invest in money market funds that are managed by affiliates of the Adviser. The indirect portion of the management fee that a Fund incurs through such investments is in addition to the Adviser's unitary management fee. Therefore, the Adviser has contractually agreed to waive the management fees that it receives in an amount equal to the indirect management fees that a Fund incurs through its investments in affiliated money market funds through August 31, 2017. There is no guarantee that the Adviser will extend the waiver of these fees past that date.

A discussion regarding the Board's basis for approving the Investment Advisory Agreement with respect to each Fund and the Sub-Advisory Agreement with respect to PowerShares Senior Loan Portfolio is available in the Trust's semi-annual report to shareholders for the period ended April 30, 2015.

## How to Buy and Sell Shares

Each Fund issues or redeems its Shares at NAV per Share only in Creation Units or Creation Unit Aggregations.

Most investors will buy and sell Shares of each Fund in the secondary market transactions through brokers. Shares of each Fund are listed for trading on the secondary market on an Exchange. Shares can be bought and sold throughout the trading day like other publicly traded shares. There is no minimum investment. Although Shares generally are purchased and sold in "round lots" of 100 Shares, brokerage firms typically permit investors to purchase or sell Shares in smaller "odd-lots," at no per share price differential. When buying or selling Shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offered price in the secondary market on each leg of a round trip (purchase and sale) transaction. The Shares of each Fund trade on the NYSE Arca (except for PowerShares LadderRite 0-5 Year Corporate Bond Portfolio, which trades on NASDAQ) under the following symbols:

Fund	Symbol
PowerShares 1-30 Laddered Treasury Portfolio	PLW
PowerShares Build America Bond Portfolio	BAB
PowerShares California AMT-Free Municipal Bond Portfolio	PWZ
PowerShares CEF Income Composite Portfolio	PCEF
PowerShares Chinese Yuan Dim Sum Bond Portfolio	DSUM

Fund	Symbol
PowerShares Emerging Markets Sovereign Debt Portfolio	PCY
PowerShares Fundamental High Yield <sup>®</sup> Corporate Bond Portfolio	PHB
PowerShares Fundamental Investment Grade Corporate Bond Portfolio	PFIG
PowerShares Global Short Term High Yield Bond Portfolio	PGHY
PowerShares International Corporate Bond Portfolio	PICB
PowerShares LadderRite 0-5 Year Corporate Bond Portfolio	LDRI
PowerShares National AMT-Free Municipal Bond Portfolio	PZA
PowerShares New York AMT-Free Municipal Bond Portfolio	PZT
PowerShares Preferred Portfolio	PGX
PowerShares Senior Loan Portfolio	BKLN
PowerShares Variable Rate Preferred Portfolio	VRP
PowerShares VRDO Tax-Free Weekly Portfolio	PVI

Share prices are reported in dollars and cents per Share.

APs may acquire Shares directly from each Fund, and APs may tender their Shares for redemption directly to each Fund, at NAV per share, only in Creation Units or Creation Unit Aggregations, and in accordance with procedures described in the SAI.

Each Fund may liquidate and terminate at any time without shareholder approval.

### Book Entry

Shares are held in book entry form, which means that no stock certificates are issued. The Depository Trust Company (“DTC”) or its nominee is the record owner of all outstanding Shares of the Funds and is recognized as the owner of all Shares for all purposes.

Investors owning Shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all Shares. Participants in DTC include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any right as an owner of Shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book entry or “street name” form.

### Share Trading Prices

The trading prices of Shares of each Fund on its respective Exchange may differ from the Fund’s daily NAV. Market forces of supply and demand, economic conditions and other factors may affect the trading prices of Shares of each Fund.

The approximate value of Shares of each Fund, an amount representing on a per share basis the sum of the current market price of the cash (“Deposit Cash”) or securities (“Deposit Securities”) and any estimated cash component, as applicable, accepted by a Fund in exchange for Shares of the Fund is disseminated every 15 seconds throughout the trading day through the facilities of

the Consolidated Tape Association. With respect to those Funds that invest in foreign securities, as the respective international local markets close, the market value of the Deposit Cash or Deposit Securities, as applicable, will continue to be updated for foreign exchange rates for the remainder of the U.S. trading day at the prescribed 15 second interval. This approximate value should not be viewed as a “real-time” update of the NAV per Share of a Fund because the approximate value may not be calculated in the same manner as the NAV, which is computed once a day, generally at the end of the business day. The Funds are not involved in, or responsible for, the calculation or dissemination of the approximate value of the Shares and the Funds do not make any warranty as to its accuracy.

## Frequent Purchases and Redemptions of Shares

Shares of the Funds may be purchased and redeemed directly from the Funds only in Creation Units by APs. The vast majority of trading in Shares of the Funds occurs on the secondary market and does not involve a Fund directly. In-kind purchases and redemptions of Creation Units by APs and cash trades on the secondary market are unlikely to cause many of the harmful effects of frequent purchases and/or redemptions of Shares of a Fund. Cash purchases and/or redemptions of Creation Units, however, can result in increased tracking error, disruption of portfolio management, dilution to a Fund and increased transaction costs, which could negatively impact a Fund’s ability to achieve its investment objective and may lead to the realization of capital gains. These consequences may increase as the frequency of cash purchases and redemptions of Creation Units by APs increases. However, direct trading by APs is critical to ensuring that Shares trade at or close to NAV.

To minimize these potential consequences of frequent purchases and redemptions of Shares, each Fund imposes transaction fees on purchases and redemptions of Creation Units to cover the custodial and other costs incurred by the Fund in effecting trades. In addition, the Adviser monitors trades by APs for patterns of abusive trading and the Funds reserve the right to not accept orders from APs that the Adviser has determined may be disruptive to the management of the Funds, or otherwise not in the best interests of the Funds. For these reasons, the Board has not adopted policies and procedures with respect to frequent purchases and redemptions of Shares of the Funds (except for PowerShares Build America Bond Portfolio, PowerShares Chinese Yuan Dim Sum Bond Portfolio, PowerShares California AMT-Free Municipal Bond Portfolio, PowerShares International Corporate Bond Portfolio, PowerShares National AMT-Free Municipal Bond Portfolio, PowerShares New York AMT-Free Municipal Bond Portfolio, PowerShares Senior Loan Portfolio and PowerShares VRDO Tax-Free Weekly Portfolio). With respect to PowerShares Build America Bond Portfolio, PowerShares California AMT-Free Municipal Bond Portfolio, PowerShares Chinese Yuan Dim Sum Bond Portfolio, PowerShares International Corporate Bond Portfolio, PowerShares National AMT-Free Municipal Bond Portfolio, PowerShares New York AMT-Free Municipal Bond Portfolio, PowerShares Senior Loan Portfolio and PowerShares VRDO Tax-Free Weekly Portfolio, in recognition of the nature of such Funds’

investments and that Shares of those Funds are purchased and redeemed in Creation Units principally for cash, the Board has adopted policies and procedures with respect to frequent purchases and redemptions of Shares of such Funds, which incorporate the practices described above, as well as additional trade monitoring for market timing activities.

---

## Dividends, Other Distributions and Taxes

### Dividends and Other Distributions

Ordinarily, dividends from net investment income, if any, are declared and paid monthly. Each Fund also intends to distribute its net realized capital gains, if any, to shareholders annually.

Distributions in cash may be reinvested automatically in additional whole Shares only if the broker through whom you purchased Shares makes such option available.

### Taxes

As with any investment, you should consider how your investment in Shares will be taxed. The tax information in this Prospectus is provided as general information only. You should consult your own tax professional about the tax consequences of an investment in Shares.

Unless your investment in Shares is made through a tax-exempt entity or tax-deferred retirement account, such as an individual retirement account, you need to be aware of the possible tax consequences when:

- Your Fund makes distributions,
- You sell your Shares, and
- You purchase or redeem Creation Units.

### Taxes on Distributions

As stated above, dividends from net investment income, if any, ordinarily are declared and paid monthly for each Fund. Each Fund also may pay a special distribution at the end of the calendar year to comply with federal tax requirements and/or to minimize or eliminate federal tax liability. Dividends paid by a Fund that are properly reported as “exempt-interest dividends” will not be subject to federal income tax. Each of PowerShares California AMT-Free Municipal Bond Portfolio, PowerShares National AMT-Free Municipal Bond Portfolio, PowerShares New York AMT-Free Municipal Bond Portfolio and PowerShares VRDO Tax-Free Weekly Portfolio (each, a “Municipal Fund”) intends to invest its assets in a manner such that at least 80% of its dividend distributions to shareholders will generally be attributable to interest that is exempt from federal income tax and will not be a tax preference item for purposes of the alternative minimum tax (“AMT”). Such dividends, however, may be included in a corporate shareholder’s “adjusted current earnings” for AMT purposes (“ACE”). Depending on a shareholder’s state of residence, exempt-interest dividends from interest earned on municipal securities issued by that state and/or its political subdivisions and instrumentalities may be exempt in the hands of such shareholder from personal income tax in that state. However, income from municipal securities issued by states other than the shareholder’s state of residence

(and/or their political subdivisions and instrumentalities) generally will not qualify for tax-free treatment for such shareholder in that state.

Distributions from the Funds’ net investment income (other than exempt interest dividends), including any net short-term capital gains, if any, and distributions of income from securities lending, are taxable to you as ordinary income. In general, your non tax-exempt distributions are subject to federal income tax when they are paid, whether you take them in cash or reinvest them in Shares (if reinvestment is available from the broker through which you purchased your Shares). Distributions reinvested in additional Shares of a Fund through the means of the dividend reinvestment service will be taxable dividends to shareholders acquiring such additional Shares to the same extent as if such dividends had been received in cash.

Dividends paid to you out of a Fund’s net investment income and net realized short-term capital gains, if any, are taxable as ordinary income. Although (1) a Fund’s dividends attributable to its “qualified dividend income” generally will be subject to federal income tax for individual and certain other non-corporate shareholders (each, an “individual shareholder”) who satisfy certain restrictions with respect to their Shares at the lower maximum rates for long-term capital gains described in the next paragraph and (2) a portion of a Fund’s dividends also may be eligible for the dividends-received deduction allowed to corporations, each Fund does not expect to distribute a significant amount of dividends eligible for those lower rates or deduction.

Distributions to you of long-term net capital gains, if any, in excess of net short-term capital losses) are taxable as long-term capital gains, regardless of how long you have held the Shares. Those gains of individual shareholders generally are subject to federal income tax at the maximum rates of 15% (20% for certain high income taxpayers).

Distributions to you in excess of a Fund’s current and accumulated earnings and profits, if any, are treated as a tax-free return of capital to the extent of your basis in your Shares and as capital gain thereafter. A distribution will reduce a Fund’s NAV per Share and may be taxable to you (as ordinary income or long-term capital gain) even though, from an investment standpoint, the distribution constitutes a partial return of capital.

By law, a Fund is required to withhold 28% of distributions otherwise payable to you if you are an individual shareholder and have not provided a correct social security number or other taxpayer identification number or are otherwise subject to backup withholding.

If you lend your Municipal Fund Shares pursuant to securities lending or similar arrangements, you may lose the ability to treat that Fund’s exempt-interest dividends (paid while the Shares are held by the borrower) as tax-exempt income. Also, interest on indebtedness incurred by a shareholder to purchase or carry Shares of a Municipal Fund will not be deductible for federal income tax purposes. You should consult your financial intermediary or tax adviser before entering into such arrangements.

Exempt-interest dividends from a Municipal Fund are taken into account in determining the taxable portion of any Social Security or railroad retirement benefits that you receive. Entities or persons who are “substantial users” (or persons related to “substantial users”) of facilities financed by private activity bonds (“PABs”) should consult their tax advisers before purchasing Municipal Fund shares because, for users of certain of these facilities, the interest on PABs is not exempt from federal income tax. For these purposes, “substantial user” is defined to include a “non-exempt person” who regularly uses in a trade or business a part of a facility financed from the proceeds of PABs. Except as noted in the following sentence, (1) interest on certain PABs is a tax preference item for purposes of the AMT, although that interest remains fully tax-exempt for regular federal income tax purposes, and (2) interest on all tax exempt obligations is included in a corporation’s ACE, without regard to whether a Municipal Fund’s tax-exempt interest is attributable to PABs. Pursuant to the American Recovery and Reinvestment Act of 2009, bonds issued during 2009 and 2010, including refunding bonds issued during that period to refund bonds issued after 2003 and before 2009, will not be PABs and the interest thereon thus will not be a tax preference item and the interest on those bonds will not be included in a corporation’s ACE.

If Municipal Fund shares are sold at a loss after being held for six months or less, the loss will be disallowed to the extent of any exempt-interest dividends received on those shares, and any loss not disallowed will be treated as long-term, instead of short-term, capital loss to the extent of any capital gain distributions received thereon. Investors also should be aware that the price of Municipal Fund shares at any time may reflect the amount of a forthcoming dividend or capital gain distribution, so if they purchase Fund shares shortly before the record date for a distribution, they will pay full price for the shares and (except for an exempt-interest dividend) receive some part of the price back as a taxable distribution even though it represents a partial return on invested capital.

If a Municipal Fund invests in instruments that generate taxable interest income, under the circumstances described in the Prospectus, the portion of any Fund dividend attributable to the interest earned thereon will be taxable to its shareholders as ordinary income to the extent of its earnings and profits (and will not qualify for the 15%/20% maximum federal income rates on “qualified dividend income” for individual shareholders), and only the remaining portion will qualify as an exempt-interest dividend. The respective portions will be determined by the “actual earned” method, under which the portion of any dividend that qualifies as an exempt-interest dividend may vary, depending on the relative proportions of tax-exempt and taxable interest earned during the dividend period. Moreover, if a Municipal Fund realizes capital gain as a result of market transactions, any distributions of the gain will be taxable to its shareholders.

A Municipal Fund may acquire zero coupon or other municipal securities issued with original issue discount (“OID”). As a holder of those securities, a Municipal Fund must take into account the OID that accrues on them during the taxable year, even if it receives no corresponding payment on them during the year. Because each Fund annually must distribute (1) substantially

all of its investment company taxable income (including any accrued OID) to avoid imposition of the excise tax and (2) substantially all of the sum of that income and its net tax-exempt income (including any tax-exempt OID) to satisfy distribution requirements, it may be required in a particular taxable year to distribute as a dividend an amount that is greater than the total amount of cash it actually receives. Those distributions will be made from a Municipal Fund’s cash assets or from the proceeds of sales of its portfolio securities, if necessary. A Municipal Fund may realize capital gains or losses from those sales, which would increase or decrease its investment company taxable income and/or net capital gain.

Any market discount recognized by a Fund on a bond is taxable as ordinary income. A market discount bond is a bond acquired in the secondary market at a price below redemption value or adjusted issue price if issued with original issue discount. Absent an election by a Fund to include the market discount in income as it accrues, gain on the Fund’s disposition of such an obligation will be treated as ordinary income rather than capital gain to the extent of the accrued market discount.

Each Municipal Fund intends to notify shareholders, generally within 60 days after the close of its taxable year, as to what portion of the Fund’s distributions qualify as tax-exempt income, ordinary income and long-term capital gains.

#### **Taxes on Share Sales**

Any capital gain or loss you realize upon a sale of Shares generally is treated as long-term capital gain or loss if you hold the Shares for more than one year and as short-term capital gain or loss if you hold the Shares for one year or less. Your ability to deduct capital losses realized on a sale of Shares may be limited.

#### **Taxes on Purchase and Redemption of Creation Units**

An AP that exchanges securities for a Creation Unit generally will recognize a gain or a loss equal to the difference between the market value of the Creation Unit and the sum of the AP’s aggregate basis in the securities surrendered plus any cash component paid. An AP that redeems a Creation Unit in exchange for securities generally will recognize a capital gain or loss equal to the difference between the AP’s basis in the Creation Unit and the aggregate market value of the securities received plus or minus an amount, if any, equal to the difference between the NAV of the redeemed Shares, as next determined after receipt of a request in proper form, and the value of those securities. The Internal Revenue Service, however, may assert that a loss realized upon an exchange of securities for a Creation Unit, or of a Creation Unit for securities, cannot be deducted currently under the rules governing “wash sales” or on the ground that there has been no significant change in the AP’s economic position. An AP exchanging securities should consult its own tax advisor(s) with respect to whether wash sale rules apply and when a loss otherwise might not be deductible.

Any capital gain or loss realized upon redemption of a Creation Unit generally is treated as long-term capital gain or loss if the Shares have been held for more than one year and as short-term capital gain or loss if the Shares have been held for one year or less.

If you purchase or redeem one or more Creation Units, you will be sent a confirmation statement showing how many Shares you purchased or sold and the price thereof.

### **New York State and City Tax Considerations for PowerShares New York AMT-Free Municipal Bond Portfolio**

Under New York law, dividends paid by the New York Fund are exempt from New York State and New York City personal income tax applicable to individuals who reside in New York State and/or City to the extent such dividends are excluded from gross income for federal income tax purposes and are derived from interest payments on tax-exempt obligations issued by or on behalf of New York State and its political subdivisions and agencies, or the governments of Puerto Rico, the U.S. Virgin Islands and Guam. Other distributions from the New York Fund, including distributions derived from taxable ordinary income and net short-term and long-term capital gains, are generally not exempt from New York State or City personal income tax.

### **California State Tax Considerations for PowerShares California AMT-Free Municipal Bond Portfolio**

To the extent that dividends from the Fund are derived from interest on California tax-exempt securities and certain U.S. government securities, such dividends also will be exempt from California personal income taxes. Under California law, a fund that qualifies as a regulated investment company must have at least 50% of its total assets invested in California state and local issues or in certain other obligations that pay interest excludable from income or in a combination of such obligations at the end of each quarter of its taxable year in order to be eligible to pay dividends that will be exempt from California personal income taxes.

The portion of dividends constituting exempt-interest dividends is that portion (i) derived from interest on obligations that would be exempt from California tax, if held by an individual, and (ii) reported by the Fund as exempt-interest dividends in written statements furnished to shareholders. However, the total amount of dividends paid by the Fund to all of its shareholders with respect to any taxable year that can be treated as exempt-interest dividends for California tax purposes cannot exceed the difference between (i) the amount of interest received by the Fund during such year on obligations that pay interest excludable from California personal income under California law and (ii) the expenses of the Fund that would be disallowed under California personal income tax law as allocable to tax exempt interest if the Fund were an individual. If the aggregate dividends designated by the Fund as exempt-interest dividends for a taxable year exceed the amount that may be treated as exempt interest dividends for California tax purposes, only that percentage of each dividend distribution equal to the ratio of aggregate exempt-interest dividends to aggregate dividends so designated will be treated as an exempt interest dividend for California tax purposes.

Unlike federal law, California law provides that no portion of the exempt-interest dividends will constitute an item of tax preference for California personal AMT purposes. Because California law does not impose personal income tax on an individual's Social Security benefits, the receipt of California exempt-interest dividends will have no effect on an individual's California personal income tax.

Distributions other than exempt-interest dividends to shareholders are includible in income subject to the California AMT. For California personal income tax purposes, distributions of long-term capital gains, if any, are taxable to shareholders as long-term capital gains, regardless of how long a shareholder has held shares of the Fund and regardless of whether the distribution is received in additional shares or in cash. Current California law taxes both long-term and short-term capital gains at rates applicable to ordinary income. In addition, unlike federal law, the shareholders of the Fund will not be subject to tax, or receive a credit for tax paid by the Fund, on undistributed capital gains, if any.

Interest on indebtedness incurred by shareholders or related parties to purchase or carry shares of an investment company paying exempt-interest dividends, such as the Fund, generally will not be deductible by the investor for state personal income tax purposes. In addition, as a result of California's incorporation of certain provisions of the Internal Revenue Code, a loss realized by a shareholder upon the sale of shares held for six months or less may be disallowed to the extent of any exempt-interest dividends received with respect to such shares. Moreover, any loss realized upon the redemption of shares within six months from the date of purchase of such shares and following receipt of a long-term capital gains distribution will be treated as long-term capital loss to the extent of such long-term capital gains distribution. Finally, any loss realized upon the redemption of shares within 30 days before or after the acquisition of other shares of the Fund may be disallowed under the "wash sale" rules.

### **Foreign Income Taxes**

Certain foreign governments levy withholding or other taxes on dividend and interest income. A Fund also may be subject to foreign income taxes with respect to other income. Although in some countries a portion of these taxes may be recoverable, the non-recovered portion of foreign withholding taxes will reduce the income received from investments in such countries.

A Fund may elect to pass its credits for foreign income taxes, subject to certain limitations, through to its shareholders for a taxable year if more than 50% of its assets at the close of the year, by value, consists of stock and securities of foreign corporations. If a Fund makes this election, each shareholder will be treated as having paid a proportionate share of the Fund's foreign income taxes, but the shareholder must include an equal amount in gross income.

The foregoing discussion summarizes some of the more important possible consequences under current federal, state and local tax law of an investment in the Funds. It is not a substitute for personal tax advice. You also may be subject to state, local, and/or foreign tax on a Fund's distributions and sales and/or redemptions of Shares. Consult your personal tax advisor(s) about the potential tax consequences of an investment in the Funds' Shares under all applicable tax laws.

---

## Distributor

Invesco Distributors, Inc. (the "Distributor") serves as the distributor of Creation Units for each Fund on an agency basis. The Distributor does not maintain a secondary market in Shares. The Distributor is an affiliate of the Adviser.

---

## Net Asset Value

The Bank of New York Mellon ("BNYM") calculates each Fund's NAV at the close of regular trading (normally 4:00 p.m., Eastern time) every day the NYSE is open, provided that for PowerShares Senior Loan Portfolio, U.S. fixed-income assets may be valued as of the announced closing time for trading in fixed-income instruments on any day that the Securities Industry and Financial Markets Association announces an early closing time. NAV is calculated by deducting all of a Fund's liabilities from the total value of its assets and dividing the result by the number of Shares outstanding, rounding to the nearest cent. Generally, the portfolio securities are recorded in the NAV no later than trade date plus one day. All valuations are subject to review by the Trust's Board or its delegate.

In determining NAV, expenses are accrued and applied daily and securities and other assets for which market quotations are readily available are valued at market value. Securities listed or traded on an exchange generally are valued at the last sales price or official closing price that day as of the close of the exchange where the security is primarily traded. The NAV for each Fund will be calculated and disseminated daily, on each day that the NYSE is open. Debt and securities not listed on an exchange normally are valued on the basis of prices provided by independent pricing services. If a security's market price is not readily available, the security will be valued using pricing provided from independent pricing services or by another method in accordance with the Trust's valuation policies and procedures approved by the Board.

Even when market quotations are available for portfolio securities, they may be stale or unreliable because the security is not traded frequently, trading on the security ceased before the close of the trading market or issuer-specific events occurred after the security ceased trading or because of the passage of time between the close of the market on which the security trades and the close of the NYSE and when a Fund calculates its NAV. Events that may cause the last market quotation to be unreliable include a merger or insolvency, events which affect a geographical area or an industry segment, such as political events or natural disasters, or market events, such as a significant movement in the U.S. market. Where market quotations are not readily available, including where the Adviser determines that the closing price of the security is unreliable, the Adviser will value the security at fair value in good faith using procedures approved by the Board.

The loans in which PowerShares Senior Loan Portfolio principally will invest are fair valued generally using evaluated quotes provided by an independent pricing service. Prices provided by the pricing services may be determined without exclusive reliance on quoted prices, and may reflect appropriate factors such as, among others, market quotes, ratings, tranche type, industry, company

performance, spread, individual trading characteristics and other market data. Fair value pricing involves subjective judgments and it is possible that a fair value determination for a security is materially different than the value that could be realized upon the sale of the security. In addition, fair value pricing could result in a difference between the prices used to calculate a Fund's NAV and the prices used by the Fund's Underlying Index. This may adversely affect a Fund's ability to track its Underlying Index. With respect to securities that are primarily listed on foreign exchanges, the value of a Fund's portfolio securities may change on days when you will not be able to purchase or sell your Shares.

---

## Fund Service Providers

BNYM, 101 Barclay Street, New York, New York 10286, is the administrator, custodian and fund accounting and transfer agent for each Fund.

K&L Gates LLP, 70 W. Madison Street, Suite 3100, Chicago, Illinois 60602, and 1601 K Street, N.W., Washington, D.C. 20006, serves as legal counsel to the Trust.

PricewaterhouseCoopers LLP, One North Wacker Drive, Chicago, Illinois 60606, serves as the Funds' independent registered public accounting firm. PricewaterhouseCoopers LLP is responsible for auditing the annual financial statements of each Fund and performs other related audit services.

---

## Financial Highlights

The financial highlights tables below are intended to help you understand each Fund's financial performance over the past five years, or if shorter, for the period since a Fund's inception. Certain information reflects financial results for a single Share. The total returns in each table represent the rate that an investor would have earned (or lost) on an investment in each Fund (assuming reinvestment of all dividends and distributions). This information has been derived from the Funds' financial statements, which have been audited by PricewaterhouseCoopers LLP, whose report, along with the Funds' financial statements, is included in the Funds' Annual Report for the fiscal year ended October 31, 2015, which is available upon request.

<sup>(a)</sup> Based on average shares outstanding.

<sup>(b)</sup> Amount represents less than \$0.005.

<sup>(c)</sup> The mean between the last bid and ask prices.

<sup>(d)</sup> Net asset value total return is calculated assuming an initial investment made at the net asset value at the beginning of the period, reinvestment of all dividends and distributions at net asset value during the period, and redemption on the last day of the period. Net asset value total return includes adjustments in accordance with accounting principles generally accepted in the United States of America and as such, the net asset value for financial reporting purposes and the returns based upon those net asset values may differ from the net asset value and returns for shareholder transactions. Market price total return is calculated assuming an initial investment made at the market price at the beginning of the period, reinvestment of all dividends and distributions at market price during the period, and sale at the market price on the last day of the period. Total investment returns calculated for a period of less than one year are not annualized.

<sup>(e)</sup> Portfolio turnover rate is not annualized for periods less than one year, if applicable, and does not include securities received or delivered from processing creations or redemptions. For the fiscal year ended October 31, 2014, the portfolio turnover calculation includes the value of securities purchased and sold in the effort to realign the Fund's portfolio holdings due to the underlying index change.

## Index Providers

No entity that creates, compiles, sponsors or maintains an Underlying Index is or will be an affiliated person, as defined in Section 2(a)(3) of the 1940 Act, or an affiliated person of an affiliated person, of the Trust, the Adviser, the Distributor or a promoter of a Fund.

Neither the Adviser nor any affiliate of the Adviser has any rights to influence the selection of the securities in the Underlying Indexes.

*Bloomberg.* Bloomberg is the Index Provider for the Underlying Index of the PowerShares VRDO Tax-Free Weekly Portfolio. Bloomberg is not affiliated with the Trust, the Adviser or the Distributor. The Bloomberg US Municipal AMT-Free Weekly VRDO Index is a trademark of Bloomberg and has been licensed for use for certain purposes by the Adviser. The Fund is entitled to use its Underlying Index pursuant to a sub-licensing agreement with the Adviser.

*BofA Merrill Lynch.* Merrill Lynch, Pierce, Fenner & Smith Incorporated ("BofA Merrill Lynch") is the Index Provider for the Underlying Index of each of PowerShares Build America Bond Portfolio, PowerShares California AMT-Free Municipal Bond Portfolio, PowerShares National AMT-Free Municipal Bond Portfolio, PowerShares New York AMT-Free Municipal Bond Portfolio and PowerShares Preferred Portfolio. BofA Merrill Lynch is not affiliated with the Trust, the Adviser or the Distributor. The BofA Merrill Lynch Build America Bond Index, The BofA Merrill Lynch California Long-Term Core Plus Municipal Securities Index, The BofA Merrill Lynch National Long-Term Core Plus Municipal Securities Index, The BofA Merrill Lynch New York Long-Term Core Plus Municipal Securities Index and The BofA Merrill Lynch Core Plus Fixed Rate Preferred Securities Index are each a service mark of BofA Merrill Lynch and have been licensed for use for certain purposes by the Adviser. Each of those Funds is entitled to use its respective Underlying Index pursuant to a sub-licensing agreement with the Adviser.

*Citigroup Index LLC.* Citigroup Index LLC is the Index Provider for the Underlying Index of PowerShares Chinese Yuan Dim Sum Bond Portfolio. Citigroup Index LLC is not affiliated with the Trust, the Adviser or the Distributor. CITI is a registered trademark and service mark of Citigroup Inc. or its affiliates, is used and registered throughout the world, and is used under license for certain purposes by the Adviser. Each of those Funds is entitled to use its respective Underlying Index pursuant to a sub-licensing agreement with the Adviser.

*DB.* Deutsche Bank Securities Inc. ("DB") is the Index Provider for the Underlying Index of each of PowerShares Emerging Markets Sovereign Debt Portfolio and PowerShares Global Short Term High Yield Bond Portfolio. DB is not affiliated with the Trust, the Adviser or the Distributor. Each of the DBIQ Emerging Markets USD Liquid Balanced Index and DB Global Short Maturity High Yield Bond Index is a trademark of DB and has been licensed for use for certain purposes by the Adviser. PowerShares Emerging Markets Sovereign Debt Portfolio and PowerShares Global Short Term High Yield Bond Portfolio are entitled to use their respective Underlying Index pursuant to a sub-licensing agreement with the Adviser.

*Nasdaq, Inc.* Nasdaq, Inc. is the Index Provider for the Underlying Index of each of PowerShares 1-30 Laddered Treasury Portfolio and PowerShares LadderRite 0-5 Year Corporate Bond Portfolio. Nasdaq, Inc. is not affiliated with the Trust, the Adviser or the Distributor. The Adviser has entered into a license agreement with Nasdaq, Inc. to use each Underlying Index. PowerShares 1-30 Laddered Treasury Portfolio and PowerShares LadderRite 0-5 Year Corporate Bond Portfolio are entitled to use its Underlying Index pursuant to the sub-licensing arrangement with the Adviser.

*NYSE Arca.* NYSE Arca serves as the calculation agent for the Wells Fargo® Hybrid and Preferred Securities Floating and Variable Rate Index. NYSE Arca develops, calculates and maintains its own proprietary indices and serves as the calculation agent for third party indices. NYSE Arca publishes index values to market data vendors use the NYSE Euronext Global Index Fund (GIF). The more than 200 index values that NYSE Arca currently calculates are used as benchmarks, or to support the trading of exchange traded funds, index options and other structured products listed on NYSE Arca. NYSE Arca announces index changes (additions, deletions, share changes, price adjustments, rebalances, etc.) as early as practicable prior to the effectiveness of the change or scheduled event. Such announcements currently are available on the Indexes Daily List at [www.nyxdata.com](http://www.nyxdata.com).

*Research Affiliates.* Research Affiliates™ is the Index Provider for the Underlying Index of each of PowerShares Fundamental High Yield® Corporate Bond Portfolio and PowerShares Fundamental Investment Grade Corporate Bond Portfolio. Research Affiliates™ is not affiliated with the Trust, the Adviser or the Distributor. The RAFI™ Bonds US High Yield 1-10 Index and the RAFI™ Bonds US Investment Grade 1-10 Index are trademarks of Research Affiliates™ and each has been licensed for use for certain purposes by the Adviser. Each of those Funds is entitled to use its respective Underlying Index pursuant to a sub-licensing agreement with the Adviser.

*S-Net.* S-Network Global Indexes, LLC ("S-NET") is the Index Provider for the Underlying Index of PowerShares CEF Income Composite Portfolio. S-NET is not affiliated with the Trust, the Adviser or the Distributor. The Adviser has entered into a license agreement with the S-NET to use the S-Network Composite Closed-End Fund Index<sup>SM</sup>. The Fund is entitled to use its Underlying Index pursuant to a sub-licensing agreement with the Adviser.

*S&P DJI.* S&P Dow Jones Indices LLC ("S&P DJI") is the Index Provider for the Underlying Index of each of PowerShares International Corporate Bond Portfolio and PowerShares Senior Loan Portfolio. S&P DJI is not affiliated with the Trust, the Adviser or the Distributor. The S&P International Corporate Bond Index® and the S&P/LSTA U.S. Leveraged Loan 100 Index are trademarks of S&P DJI or its licensors and have been licensed for use for certain purposes by the Adviser. Each of PowerShares International Corporate Bond Portfolio and PowerShares Senior Loan Portfolio is entitled to use its respective Underlying Index pursuant to a sub-licensing agreement with the Adviser.

*Wells Fargo Securities, LLC.* Wells Fargo Securities, LLC (together with Wells Fargo & Company, "Wells Fargo") is the Index Provider

for the Underlying Index of PowerShares Variable Rate Preferred Portfolio. Wells Fargo is not affiliated with the Trust, the Adviser or the Distributor. The Wells Fargo® Hybrid and Preferred Securities Floating and Variable Rate Index is a service mark of Wells Fargo & Company and has been licensed for use by the Adviser. The Fund is entitled to use the Underlying Index pursuant to a sub-licensing agreement with the Adviser.

Set forth below is a list of each Fund and its Underlying Index:

Fund	Underlying Index
PowerShares 1-30 Laddered Treasury Portfolio	Ryan/NASDAQ U.S. 1-30 Year Treasury Laddered Index

THERE ARE NO THIRD PARTY BENEFICIARIES OF ANY AGREEMENTS OR ARRANGEMENTS BETWEEN BOFA MERRILL LYNCH AND POWERSHARES.**

No purchaser, seller or holder of a security, or any other person or entity, should use or refer to any BofA Merrill Lynch trade name, trademark or service mark to sponsor, endorse, market or promote this product without first contacting BofA Merrill Lynch to determine whether BofA Merrill Lynch’s permission is required. Under no circumstances may any person or entity claim any affiliation with BofA Merrill Lynch without the written permission of BofA Merrill Lynch.

**Citi Index.** PowerShares Chinese Yuan Dim Sum Bond Portfolio is not sponsored, endorsed, sold or promoted by Citigroup Index LLC (“Citi Index”) or any of its affiliates. Citi Index makes no representation or warranty, express or implied, to the owners or prospective owners of shares of the Fund or any member of the public regarding the advisability of investing in securities generally or in the Fund particularly, or the ability of the Fund to track the price and yield performance of the Citi Custom Dim Sum (Offshore CNY) Bond Index or the ability of the Citi Custom Dim Sum (Offshore CNY) Bond Index to track general bond market performance. Citi Index’s only relationship to the Adviser is the licensing of certain information, data, trademarks and trade names of Citigroup. The Citi Custom Dim Sum (Offshore CNY)

Bond Index is determined, composed and calculated by Citi Index without regard to the Adviser or the Fund. Citi Index has no obligation to take the needs of the Adviser or the owners or prospective owners of the Fund into consideration in determining, composing or calculating the Citi Custom Dim Sum (Offshore CNY) Bond Index. Citi Index is not responsible for and has not participated in the determination of the prices and amount of the shares to be issued by the Fund or the timing of the issuance or sale of the shares to be issued by the Fund or in the determination or calculation of the equation by which the shares to be issued by the Fund are to be converted into cash. Citi Index has no obligation or liability in connection with the administration, marketing or trading of the Fund.

**CITI INDEX DOES NOT GUARANTEE THE ACCURACY OR COMPLETENESS OF THE CITI CUSTOM DIM SUM (OFFSHORE CNY) BOND INDEX OR ANY DATA INCLUDED THEREIN, OR FOR ANY COMMUNICATIONS, INCLUDING BUT NOT LIMITED TO, ORAL OR WRITTEN COMMUNICATIONS (INCLUDING ELECTRONIC COMMUNICATIONS) WITH RESPECT THERETO, AND CITI INDEX SHALL HAVE NO LIABILITY FOR ANY ERRORS, OMISSIONS OR DELAYS THEREIN. CITI INDEX MAKES NO WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY THE ADVISER, OWNERS OR PROSPECTIVE OWNERS OF SHARES OF THE FUND, OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE CITI CUSTOM DIM SUM (OFFSHORE CNY) BOND INDEX OR ANY DATA INCLUDED THEREIN. CITI INDEX MAKES NO EXPRESS OR IMPLIED WARRANTIES, AND EXPRESSLY DISCLAIMS ALL WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE WITH RESPECT TO THE CITI CUSTOM DIM SUM (OFFSHORE CNY) BOND INDEX OR ANY DATA INCLUDED THEREIN. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT SHALL CITI INDEX HAVE ANY LIABILITY FOR ANY DIRECT, SPECIAL, PUNITIVE, INDIRECT, CONSEQUENTIAL OR ANY OTHER DAMAGES (INCLUDING LOST PROFITS), EVEN IF NOTIFIED OF THE POSSIBILITY OF SUCH DAMAGES, WHETHER IN CONTRACT, TORT, STRICT LIABILITY OR OTHERWISE.**

*Deutsche Bank Securities Inc.* PowerShares Emerging Markets Sovereign Debt Portfolio and PowerShares Global Short Term High Yield Bond Portfolio are not sponsored, endorsed, sold or promoted by DB, its affiliates (including its parent Deutsche Bank AG), or its third party licensors.

DB makes no representation or warranty, express or implied, to the owners of Shares of PowerShares Emerging Markets Sovereign Debt Portfolio and PowerShares Global Short Term High Yield Bond Portfolio or any member of the public regarding the advisability of investing in securities generally or in Shares of PowerShares Emerging Markets Sovereign Debt Portfolio or PowerShares Global Short Term High Yield Bond Portfolio particularly. As the Index Provider for PowerShares Emerging Markets Sovereign Debt Portfolio and PowerShares Global Short Term High Yield Bond Portfolio, DB's only relationship to the Distributor, the Adviser or the Trust is through the licensing of certain trademarks and trade names of DB and Underlying Indexes.

The DBIQ Emerging Market USD Liquid Balanced Index and DB Global Short Maturity High Yield Bond Index are selected and calculated without regard to the Distributor, the Adviser, the Trust or any holders of Shares of PowerShares Emerging Markets Sovereign Debt Portfolio or PowerShares Global Short Term High Yield Bond Portfolio, respectively. DB has no obligation to take the needs of the Distributor, the Adviser, the Trust or the owners of Shares of PowerShares Emerging Markets Sovereign Debt Portfolio or PowerShares Global Short Term High Yield Bond Portfolio into consideration when determining, composing or calculating the DBIQ Emerging Market USD Liquid Balanced Index or DB Global Short Maturity High Yield Bond Index, respectively. DB is not responsible for and has not participated in the determination of the prices and amount of Shares of PowerShares Emerging Markets Sovereign Debt Portfolio or PowerShares Global Short Term High Yield Bond Portfolio or the timing of the issuance or sale of Shares of PowerShares Emerging Markets Sovereign Debt Portfolio or PowerShares Global Short Term High Yield Bond Portfolio or in the determination of any financial calculations relating thereto. DB has no obligation or liability in connection with the administration of the Trusts or marketing of the Shares of PowerShares Emerging Markets Sovereign Debt Portfolio or PowerShares Global Short Term High Yield Bond Portfolio. DB does not guarantee the accuracy, timeliness, and/or the completeness of the DBIQ Emerging Market USD Liquid Balanced Index or DB Global Short Maturity High Yield Bond Index or any data included therein, and DB shall have no liability for any errors, omissions, delays, or interruptions therein. DB makes no warranty, express or implied, as to results to be obtained by the Distributor, the Adviser, the Trust or owners of Shares of PowerShares Emerging Markets Sovereign Debt Portfolio and PowerShares Global Short Term High Yield Bond Portfolio, or any other person or entity, from the use of the DBIQ Emerging Market USD Liquid Balanced Index or DB Global Short Maturity High Yield Bond Index or any data included therein.

**DB MAKES NO EXPRESS OR IMPLIED WARRANTIES AND EXPRESSLY DISCLAIMS ALL WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE WITH RESPECT TO THE DBIQ EMERGING MARKET USD LIQUID BALANCED INDEX OR DB GLOBAL SHORT MATURITY HIGH YIELD BOND INDEX, OR ANY DATA INCLUDED THEREIN, OR THE POWERSHARES EMERGING MARKETS SOVEREIGN DEBT PORTFOLIO, POWERSHARES GLOBAL SHORT TERM HIGH YIELD BOND PORTFOLIO, THE TRUST, OR THE SHARES OF POWERSHARES EMERGING MARKETS SOVEREIGN DEBT PORTFOLIO AND POWERSHARES GLOBAL SHORT TERM HIGH YIELD BOND PORTFOLIO. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT SHALL DB HAVE ANY LIABILITY FOR ANY SPECIAL PUNITIVE, INDIRECT, OR CONSEQUENTIAL DAMAGES (INCLUDING LOST PROFITS) RESULTING FROM THE USE OF THE DBIQ EMERGING MARKET USD LIQUID BALANCED INDEX AND DB GLOBAL SHORT MATURITY HIGH YIELD BOND INDEX OR ANY DATA INCLUDED THEREIN, EVEN IF NOTIFIED OF THE POSSIBILITY OF SUCH DAMAGES. THERE ARE NO THIRD PARTY BENEFICIARIES OF ANY AGREEMENTS OR ARRANGEMENTS BETWEEN DEUTSCHE BANK AG AND THE ADVISER.**

**Deutsche Bank®**, **“DBIQ®**, **DBIQ Emerging Market USD Liquid Balanced Index™** and **DB Global Short Maturity High Yield Bond Index™** are marks of Deutsche Bank AG and have been licensed for use for certain purposes by the Adviser.

No purchaser, seller or holder of this security, or any other person or entity, should use or refer to any DB trade name, trademark or service mark to sponsor, endorse, market or promote this product without first contacting DB to determine whether DB’s permission is required. Under no circumstances may any person or entity claim any affiliation with DB without the written permission of DB.

**Nasdaq, Inc.** The NASDAQ LadderRite® 0-5 Year USD Corporate Bond Index is a trademark jointly owned by Nasdaq, Inc. and LadderRite Portfolios LLC and has been licensed for use for certain purposes by the Adviser.

PowerShares LadderRite 0-5 Year Corporate Bond Portfolio is not sponsored, endorsed, sold or promoted by Nasdaq, Inc., LadderRite Portfolios LLC or their affiliates (collectively referred to as the “Corporations”). The Corporations have not passed on the legality or suitability of, or the accuracy or adequacy of descriptions and disclosures relating to, the PowerShares LadderRite 0-5 Year Corporate Bond Portfolio. The Corporations make no representation or warranty, express or implied to the owners of the PowerShares LadderRite 0-5 Year Corporate Bond Portfolio or any member of the public regarding the advisability of investing in securities generally or in the PowerShares LadderRite 0-5 Year Corporate Bond Portfolio particularly, or the ability of the Underlying Index to track general stock market performance. The Corporations’ only relationship to the Adviser is in the licensing of the trade/service marks of Nasdaq®, and the NASDAQ LadderRite® 0-5 Year USD Corporate Bond Index, and certain trade names of the Corporations and the use of the NASDAQ LadderRite® 0-5 Year USD Corporate Bond Index, which is determined, composed and calculated by Nasdaq without regard to the Adviser or the PowerShares LadderRite 0-5 Year Corporate Bond Portfolio. Nasdaq has no obligation to take the needs of the Adviser or the owners of the PowerShares LadderRite 0-5 Year Corporate Bond Portfolio into consideration in determining, composing or calculating the NASDAQ LadderRite® 0-5 Year USD Corporate Bond Index. The Corporations are not responsible for, and have not participated in, the determination of the timing of, prices at, or quantities of the PowerShares LadderRite 0-5 Year Corporate Bond Portfolio to be issued or in the determination or calculation of the equation by which the PowerShares LadderRite 0-5 Year Corporate Bond Portfolio is to be converted into cash. The Corporations have no liability in connection with the administration, marketing or trading of the Fund. “Nasdaq®” is a registered trademark and is used under license. “LadderRite®” is a registered trademark and is used under license.

PowerShares 1-30 Laddered Treasury Portfolio is not sponsored, endorsed, sold or promoted by Nasdaq, Inc. or its affiliates (Nasdaq, with its affiliates, are referred to as the “Corporations”). The Corporations have not passed on the legality or suitability of, or the accuracy or adequacy of descriptions and disclosures relating to, PowerShares 1-30 Laddered Treasury Portfolio. The Corporations make no representation or warranty, express or implied, to the owners of PowerShares 1-30 Laddered Treasury

Portfolio or any member of the public regarding the advisability of investing in securities generally or in PowerShares 1-30 Laddered Treasury Portfolio particularly, or the ability of the Underlying Index to track general stock market performance. The Corporations’ only relationship to the Adviser is in the licensing of the Nasdaq and the Underlying Index trade/service marks, certain trade names of the Corporations and the use of the Underlying Index, which is determined, composed and calculated by Nasdaq without regard to the Adviser or PowerShares 1-30 Laddered Treasury Portfolio. Nasdaq has no obligation to take the needs of the Licensee or the owners of PowerShares 1-30 Laddered Treasury Portfolio into consideration in determining, composing or calculating Underlying Index. The Corporations are not responsible for and have not participated in the determination of the timing of, prices at, or quantities of PowerShares 1-30 Laddered Treasury Portfolio to be issued or in the determination or calculation of the equation by which PowerShares 1-30 Laddered Treasury Portfolio is to be converted into cash. The Corporations have no liability in connection with the administration, marketing or trading of PowerShares 1-30 Laddered Treasury Portfolio. “Nasdaq®” is a registered trademark and is used under license.

THE CORPORATIONS DO NOT GUARANTEE THE ACCURACY AND/OR UNINTERRUPTED CALCULATIONS OF THE UNDERLYING INDEX OR ANY DATA INCLUDED THEREIN. THE CORPORATIONS MAKE NO WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY THE ADVISERS, OWNERS OF THE ABOVE-REFERENCED PORTFOLIOS, OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE UNDERLYING INDEXES OR ANY DATA INCLUDED THEREIN. THE CORPORATIONS MAKE NO EXPRESS OR IMPLIED WARRANTIES AND EXPRESSLY DISCLAIM ALL WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE WITH RESPECT TO THE UNDERLYING INDEXES OR ANY DATA INCLUDED THEREIN. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT SHALL THE CORPORATIONS HAVE ANY LIABILITY FOR ANY LOST PROFITS OR SPECIAL, INCIDENTAL, PUNITIVE, INDIRECT OR CONSEQUENTIAL DAMAGE, EVEN IF NOTIFIED OF THE POSSIBILITY OF SUCH DAMAGES.

**S-Net.** PowerShares CEF Income Composite Portfolio is not sponsored, endorsed, sold or promoted by S-NET. S-NET makes no representation or warranty, express or implied, to the owners of the Fund or any member of the public regarding the advisability of investing in securities generally or in the Fund particularly or the ability of the Underlying Index to track the performance of the securities market. S-NET’s only relationship to the Adviser is the licensing of certain service marks and trade names of S-NET and of the Underlying Index that is determined, composed and calculated by S-NET without regard to the Adviser or the Fund. S-NET has no obligation to take the needs of the Adviser or the owners of the Fund into consideration in determining, composing or calculating the Underlying Index. S-NET is not responsible for and has not participated in the determination of the timing of, prices at, or quantities of the Fund to be issued or in the determination or calculation of the equation by which the Fund is to be converted into cash. S-NET has no obligation or liability in connection with the administration, marketing or trading of the Fund.

S-NET DOES NOT GUARANTEE THE ACCURACY AND/OR THE COMPLETENESS OF THE UNDERLYING INDEX OR ANY DATA INCLUDED THEREIN AND S-NET SHALL HAVE NO LIABILITY FOR ANY ERRORS, OMISSIONS, OR INTERRUPTIONS THEREIN. S-NET MAKES NO WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY THE ADVISER, OWNERS OF THE FUND, OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE UNDERLYING INDEX OR ANY DATA INCLUDED THEREIN. S-NET MAKES NO EXPRESS OR IMPLIED WARRANTIES, AND EXPRESSLY DISCLAIMS ALL WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE WITH RESPECT TO THE UNDERLYING INDEX OR ANY DATA INCLUDED THEREIN. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT SHALL S-NET HAVE ANY LIABILITY FOR ANY SPECIAL, PUNITIVE, INDIRECT, OR CONSEQUENTIAL DAMAGES (INCLUDING LOST PROFITS), EVEN IF NOTIFIED OF THE POSSIBILITY OF SUCH DAMAGES.

Neither ALM Research Solutions, LLC nor Research Affiliates, LLC accept any liability for any errors or any loss arising from the use of information in this publication.

NEITHER THE ADVISER NOR RESEARCH AFFILIATES, LLC GUARANTEES THE ACCURACY AND/OR THE COMPLETENESS OF THE UNDERLYING INDEXES OR ANY DATA INCLUDED THEREIN, AND NEITHER SHALL HAVE ANY LIABILITY FOR ANY ERRORS, OMISSIONS, RESTATEMENTS, RE-CALCULATIONS, OR INTERRUPTIONS THEREIN. NEITHER THE ADVISER NOR RESEARCH AFFILIATES, LLC MAKES ANY WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY THE FUNDS, OWNERS OF THE SHARES OF THE FUNDS OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE UNDERLYING INDEXES OR ANY DATA INCLUDED THEREIN. NEITHER THE ADVISER NOR RESEARCH AFFILIATES, LLC MAKES ANY EXPRESS OR IMPLIED WARRANTIES AND EXPRESSLY DISCLAIMS ALL WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE WITH RESPECT TO THE UNDERLYING INDEXES OR ANY DATA INCLUDED THEREIN. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT SHALL THE ADVISER OR RESEARCH AFFILIATES, LLC HAVE ANY LIABILITY FOR ANY SPECIAL, PUNITIVE, DIRECT, INDIRECT OR CONSEQUENTIAL DAMAGES (INCLUDING LOST PROFITS) ARISING OUT OF MATTERS RELATING TO THE USE OF THE UNDERLYING INDEXES, EVEN IF NOTIFIED OF THE POSSIBILITY OF SUCH DAMAGES.

**S&P DJI.** The S&P/LSTA U.S. Leveraged Loan 100 Index (the "Index") is a product of S&P Dow Jones Indices LLC ("S&P DJI"), and has been licensed for use by the Adviser. S&P® is a registered trademark of Standard & Poor's Financial Services LLC ("S&P") and LSTA® is a registered trademark of the Loan Syndications and Trading Association, Inc. ("LSTA"). These trademarks have been licensed for use by S&P DJI and sublicensed for certain purposes by the Adviser.

The PowerShares International Corporate Bond Portfolio and PowerShares Senior Loan Portfolio (the "Funds") are not sponsored, endorsed, sold or promoted by S&P DJI, S&P, LSTA or any of their respective affiliates or third party licensors (collectively, "S&P Dow Jones Indices"). S&P Dow Jones Indices makes no representation or warranty, express or implied, to the owners of the Funds or any member of the public regarding the advisability of investing in securities generally or in Funds particularly or the ability of the Index to track general market performance. S&P Dow Jones Indices' only relationship to the Adviser with respect to Funds is the licensing of the Index and the above-referenced trademarks of S&P Dow Jones Indices. The Index is determined, composed and calculated by S&P Dow Jones Indices without regard to the Adviser or the Funds. S&P Dow Jones Indices have

no obligation to take the needs of the Adviser or the owners of Funds into consideration in determining, composing or calculating the Index. S&P Dow Jones Indices is not responsible for and has not participated in the determination of the prices, and amount of Funds or the timing of the issuance or sale of Funds or in the determination or calculation of the equation by which Funds may be converted into cash, surrendered or redeemed, as the case may be. S&P Dow Jones Indices has no obligation or liability in connection with the administration, marketing or trading of Funds. There is no assurance that investment products based on the Index will accurately track index performance or provide positive investment returns. S&P Dow Jones Indices LLC and its subsidiaries are not investment advisors. Inclusion of a security within an index is not a recommendation by S&P Dow Jones Indices to buy, sell, or hold such security, nor is it considered to be investment advice.

S&P DOW JONES INDICES DOES NOT GUARANTEE THE ADEQUACY, ACCURACY, TIMELINESS AND/OR THE COMPLETENESS OF THE INDEX OR ANY DATA RELATED THERETO OR ANY COMMUNICATION, INCLUDING BUT NOT LIMITED TO, ORAL OR WRITTEN COMMUNICATION (INCLUDING ELECTRONIC COMMUNICATIONS) WITH RESPECT THERETO. S&P DOW JONES INDICES SHALL NOT BE SUBJECT TO ANY DAMAGES OR LIABILITY FOR ANY ERRORS, OMISSIONS, OR DELAYS THEREIN. S&P DOW JONES INDICES MAKES NO EXPRESS OR IMPLIED WARRANTIES, AND EXPRESSLY DISCLAIMS ALL WARRANTIES, OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE OR AS TO RESULTS TO BE OBTAINED BY THE ADVISER, OWNERS OF THE Funds, OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE INDEX OR WITH RESPECT TO ANY DATA RELATED THERETO. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT WHATSOEVER SHALL S&P DOW JONES INDICES BE LIABLE FOR ANY INDIRECT, SPECIAL, INCIDENTAL, PUNITIVE, OR CONSEQUENTIAL DAMAGES INCLUDING BUT NOT LIMITED TO, LOSS OF PROFITS, TRADING LOSSES, LOST TIME OR GOODWILL, EVEN IF THEY HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES, WHETHER IN CONTRACT, TORT, STRICT LIABILITY, OR OTHERWISE. THERE ARE NO THIRD PARTY BENEFICIARIES OF ANY AGREEMENTS OR ARRANGEMENTS BETWEEN S&P DOW JONES INDICES AND THE ADVISER, OTHER THAN THE LICENSORS OF S&P DOW JONES INDICES.

**Wells Fargo.** PowerShares Variable Rate Preferred Portfolio is not sponsored, issued or advised by Wells Fargo. Wells Fargo makes no representation or warranty, express or implied, to Fund investors or any member of the public regarding the performance of the Fund's Underlying Index or the Fund or the ability of any data supplied by Wells Fargo to track the performance of the securities referenced by the Fund's Underlying Index. Wells Fargo's only relationship to the Adviser is the licensing of certain trademarks and trade names of Wells Fargo and of the data supplied by Wells Fargo that is determined, composed and calculated by Wells Fargo without regard to the Fund or its Shares. Wells Fargo has no obligation to take the needs of the Fund into consideration when determining, composing or calculating the data. Wells Fargo has no obligation or liability in connection with the administration, marketing or trading of the Fund.

WELLS FARGO DOES NOT GUARANTEE THE ACCURACY AND/OR THE COMPLETENESS OF THE WELLS FARGO® HYBRID AND PREFERRED SECURITIES FLOATING AND VARIABLE RATE INDEX OR ANY DATA INCLUDED THEREIN, AND WELLS FARGO SHALL HAVE NO LIABILITY FOR ANY ERRORS OR OMISSIONS THEREIN. WELLS FARGO MAKES NO WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY THE ADVISER AND THE FUND, OR ANY OTHER PERSON OR ENTITY FROM THE USE OF UNDERLYING INDEX OR ANY DATA INCLUDED THEREIN. WELLS FARGO DISCLAIMS ALL WARRANTIES, EXPRESS, IMPLIED OR STATUTORY, INCLUDING WITHOUT LIMITATION THE IMPLIED WARRANTIES OF TITLE, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NON-INFRINGEMENT. IN NO EVENT SHALL WELLS FARGO HAVE ANY LIABILITY FOR ANY CONSEQUENTIAL, INCIDENTAL OR SPECIAL DAMAGES OR LOST PROFITS ARISING OUT OF OR IN CONNECTION WITH THE USE OF THE UNDERLYING INDEX OR ANY DATA CONTAINED THEREIN.

NYSE Group, which acts as calculation agent for the Wells Fargo® Hybrid and Preferred Securities Floating and Variable Rate Index, is not affiliated with the Adviser or Wells Fargo and does not approve, endorse, review or recommend the Fund. The Fund is based on the Wells Fargo® Hybrid and Preferred Securities Floating and Variable Rate Index, and the value of the Underlying Index is derived from sources deemed reliable, but NYSE Arca and its suppliers do not guarantee the correctness or completeness of the Underlying Index, its values or other information furnished in connection with the Underlying Index.

NYSE GROUP MAKES NO WARRANTY, EXPRESS OR IMPLIED, AS TO THE RESULTS TO BE OBTAINED BY ANY PERSON OR ENTITY FROM THE USE OF THE UNDERLYING INDEX, TRADING BASED ON THE UNDERLYING INDEX, OR ANY DATA INCLUDED THEREIN IN CONNECTION WITH THE TRADING OF THE FUND, OR FOR ANY OTHER USE. WELLS FARGO AND NYSE GROUP MAKE NO WARRANTIES, EXPRESS OR IMPLIED, AND HEREBY EXPRESSLY DISCLAIM ALL WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE WITH RESPECT TO THE UNDERLYING INDEX OR ANY DATA INCLUDED THEREIN.

The Adviser does not guarantee the accuracy and/or the completeness of the Underlying Indexes or any data included therein, and the Adviser shall have no liability for any errors, omissions, restatements, re-calculations, or interruptions therein. The Adviser makes no warranty, express or implied, as to results to be obtained by the Funds, owners of the Shares of the Funds or any other person or entity from the use of the Underlying Index or any data included therein. The Adviser makes no express or implied warranties, and expressly disclaims all warranties of merchantability or fitness for a particular purpose with respect to the Underlying Indexes or any data included therein. Without limiting any of the foregoing, in no event shall the Adviser have any liability for any special, punitive, direct, indirect or consequential damages (including lost profits) arising out of matters relating to the use of the Underlying Indexes even if notified of the possibility of such damages.

---

## Premium/Discount Information

Information on the daily NAV per Share for each Fund can be found at [www.invescopowershares.com](http://www.invescopowershares.com). Additionally, information regarding how often the Shares of each Fund traded on NYSE Arca or NASDAQ, as applicable, at a price above (at a premium) or below (at a discount) the NAV of the Fund during the prior calendar year and subsequent quarters, can be found at [www.invescopowershares.com](http://www.invescopowershares.com).

---

## Other Information

Section 12(d)(1) of the 1940 Act restricts investments by investment companies (and companies relying on Section 3(c)(1) or 3(c)(7) of the 1940 Act) in the securities of other investment companies. However, registered investment companies are permitted to invest in the Funds beyond the limits set forth in Section 12(d)(1) subject to certain terms and conditions set forth in an SEC exemptive order issued to the Trust, including that such investment companies enter into a participant agreement with the Trust on behalf of a Fund prior to exceeding the limits imposed by Section 12(d)(1). Additionally, each Fund is permitted to invest in other registered investment companies beyond the limits set forth in Section 12(d)(1) subject to certain terms and conditions set forth in another exemptive order that the SEC has issued to the Trust. If a Fund relies on this exemptive relief, however, other investment companies may not invest in that Fund beyond the statutory provisions of Section 12(d)(1).

### Continuous Offering

The method by which Creation Unit Aggregations of Shares are created and traded may raise certain issues under applicable securities laws. Because new Creation Unit Aggregations of Shares are issued and sold by the Funds on an ongoing basis, a “distribution,” as such term is used in the Securities Act of 1933, as amended (the “Securities Act”), may occur at any point. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the prospectus-delivery requirement and liability provisions of the Securities Act.

For example, a broker-dealer firm or its client may be deemed a statutory underwriter if it takes Creation Unit Aggregations after placing an order with the Distributor, breaks them down into constituent Shares and sells such Shares directly to customers, or if it chooses to couple the creation of a supply of new Shares with an active selling effort involving solicitation of secondary market demand for Shares. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker-dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to a characterization as an underwriter.

Broker-dealer firms should also note that dealers who are not “underwriters” but are effecting transactions in Shares, whether

or not participating in the distribution of Shares, are generally required to deliver a prospectus. This is because the prospectus delivery exemption in Section 4(a)(3)(C) of the Securities Act is not available in respect of such transactions as a result of Section 24(d) of the 1940 Act. As a result, broker-dealer firms should note that dealers who are not “underwriters” but are participating in a distribution (as contrasted with engaging in ordinary secondary market transactions), and thus dealing with the Shares that are part of an overallotment within the meaning of Section 4(a)(3)(C) of the Securities Act, will be unable to take advantage of the prospectus delivery exemption provided by Section 4(a)(3) of the Securities Act. For delivery of prospectuses to exchange members, the prospectus delivery mechanism of Rule 153 under the Securities Act is available with respect to transactions on a national exchange.

### Delivery of Shareholder Documents—Householding

Householding is an option available to certain investors of the Funds. Householding is a method of delivery, based on the preference of the individual investor, in which a single copy of certain shareholder documents can be delivered to investors who share the same address, even if their accounts are registered under different names. Householding for the Funds is available through certain broker-dealers. If you are interested in enrolling in householding and receiving a single copy of prospectuses and other shareholder documents, please contact your broker-dealer. If you currently are enrolled in householding and wish to change your householding status, please contact your broker-dealer.

### For More Information

For more detailed information on the Trust, the Funds and the Shares, you may request a copy of the Trust’s SAI. The SAI provides detailed information about the Funds and is incorporated by reference into this Prospectus. This means that the SAI legally is a part of this Prospectus. Additional information about the Funds’ investments also is available in the Funds’ Annual and Semi-Annual Reports to Shareholders. In the Funds’ current Annual Report, you will find a discussion of the market conditions and investment strategies that significantly affected each Fund’s performance during the last fiscal year. If you have questions about the Funds or Shares or you wish to obtain the SAI, Annual Report and/or Semi-Annual Report free of charge, or to make Shareholder inquiries, please:

- Call: Invesco Distributors, Inc. at 1.800.983.0903  
Monday through Friday  
8:00 a.m. to 5:00 p.m. Central Time
- Write: PowerShares Exchange-Traded Fund Trust II  
c/o Invesco Distributors, Inc.  
11 Greenway Plaza, Suite 1000  
Houston, Texas 77046-1173
